5. Oceanographic survey

5.1 Physical and chemical oceanography

There were 82 oceanographic stations completed during 10-29 August 2013 (Figure 1). Physical and chemical characteristic of water including conductivity, temperature, fluorescence, dissolved oxygen, and PAR was measuring using SeaBird 911 CTD and compact CTD data logger (JFE Advantech) (Figure 2). The SeaBird 911 CTD and compact CTD were deployed the same time from the sea surface to approximately 5 meter above the sea bottom. During retrieving the CTD, the Carousel Water Sample comprised with the Niskin Bottles which is a part of SeaBird 911 CTD system were used for collecting water samples at sub-surface water (3 meter), mid-water column, and bottom (5 meter above bottom) as shown in table1.

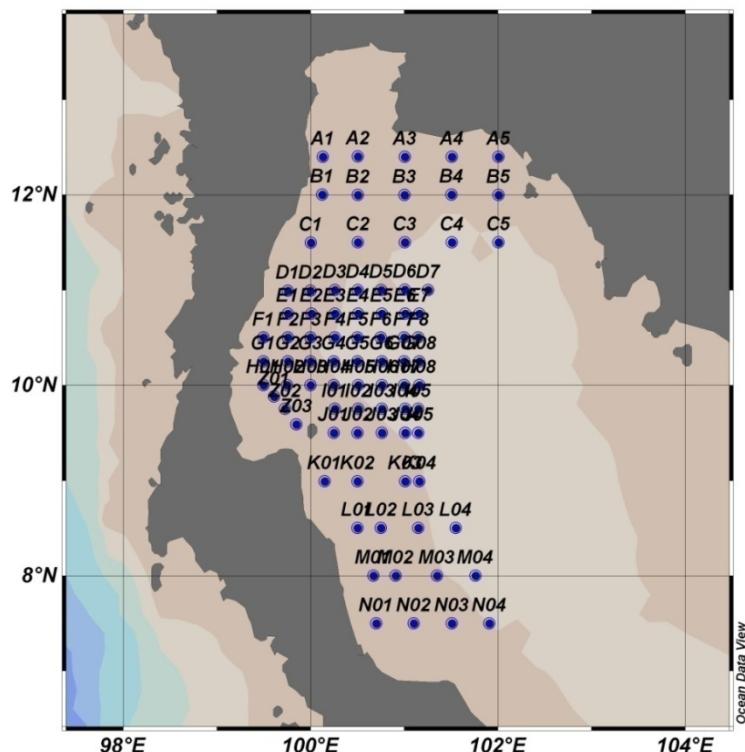

Figure 1 Survey station map.

The in situ microstructure scan (MSS90) was deployed after the CTD deployment to measure the sea water turbulences (Figure 3). Water sampling from Niskin bottles were collected 250 ml each water depth for nutrients analysis and 1000 ml for chlorophyll concentration measurement (Figure 4). Water samples was filtered through Whatman GFC filter paper and stored in -24 °C freezer (Figure 4). During the oceanographic survey at each station, the Acoustic Doppler Current Profiler (ADCP) was deployed at sub-surface water (1 meter) for 20 minutes at stern deck (Figure 5).

Thermosalinograph with Fluorometer (TSG-Fluorometer) were operated along the cruise track of M.V. SEAFDEC 2 to measure the temperature and chlorophyll a. The system was designed to pump water from approximately 5 meter below the sea surface continuously. The data were average every 6 second.

Additional survey station had been added from the original plane for 3 stations (st.Z01, Z02, Z03) for compact CTD data logger and ADCP data collection only. Operating summary had shown in table 1.

Mooring survey station was conducted during 22-25 August 2013; compact CTD data logger was operated every hour for 72 hours as well as the MSS90 was operated every hour for 25 hours, and ADCP was deployed for 72 hours (Figure 6).

5.2 Preliminary analysis of oceanographic parameter

All 82 oceanographic stations were conducted during day time with air temperature recorded between 27 and 32 °C. Sea depth varies between 12 m (Z03) and 68 m (F08). Sea surface temperature was between 28.5 and 30.0 °C. The water column at the upper-Gulf of Thailand are well mixed (transect A to J), however, thermocline layer was found between 40 and 50 m depth at transect K to N. Rapid changes of salinity, dissolved oxygen, and pH with increasing depth also found at the thermocline layer. The profiles of temperature (°C), salinity (PSU), dissolved oxygen (ml/l), fluorescence (microg/l), and pH from the oceanographic stations were plotted and shown in figure 7. Data from each station had shown the similar pattern except the dissolved oxygen and pH data.

Horizontal and vertical plot along the survey track of temperature (°C), salinity (PSU), and dissolved oxygen (ml/l) were shown in figure 8 and 9. High salinity and low water temperature were observed at the station off coast of Nakhon Srithammarat to Songkla province (K03, K04, L03, L04, M03, M04, N03, and N04). Dissolved oxygen concentration (ml/l) found fluctuated between 3.0 and 4.5 ml/l at the Central Gulf area while the low

dissolved oxygen concentration at the sea bottom found at west coast off Chumporn Province and outer station off coast of Songkla province at 2.75-3.0 ml/l. Vertical plot along the cruise track reveal the South China Sea water mass with low temperature (26.5-27.0 °C) and high salinity (33.5-34.0 PSU) mixed over at sea depth between 40-60 m at the outer of the Gulf of Thailand (Figure 9).

6. Cruise comments and suggestions

- 6.1 The data sharing policy still unclear among the scientists onboard as all the raw data retrieved during M.V.SEADEC 2 cruise 43-2/2013 were un-shared except the SeaBird 911 CTD raw data were duplicated into 3 copies and distributed to MCRC for 2 copies and 1 copy for SEAFDEC/TD.
- 6.2 MCRC must sent senior scientist as a chief scientist onboard during the survey since there were foreign scientists onboard and need English speaking for communication and executive decisions during the cruise.
