

ASEAN CATCH DOCUMENTATION SCHEME (ACDS)

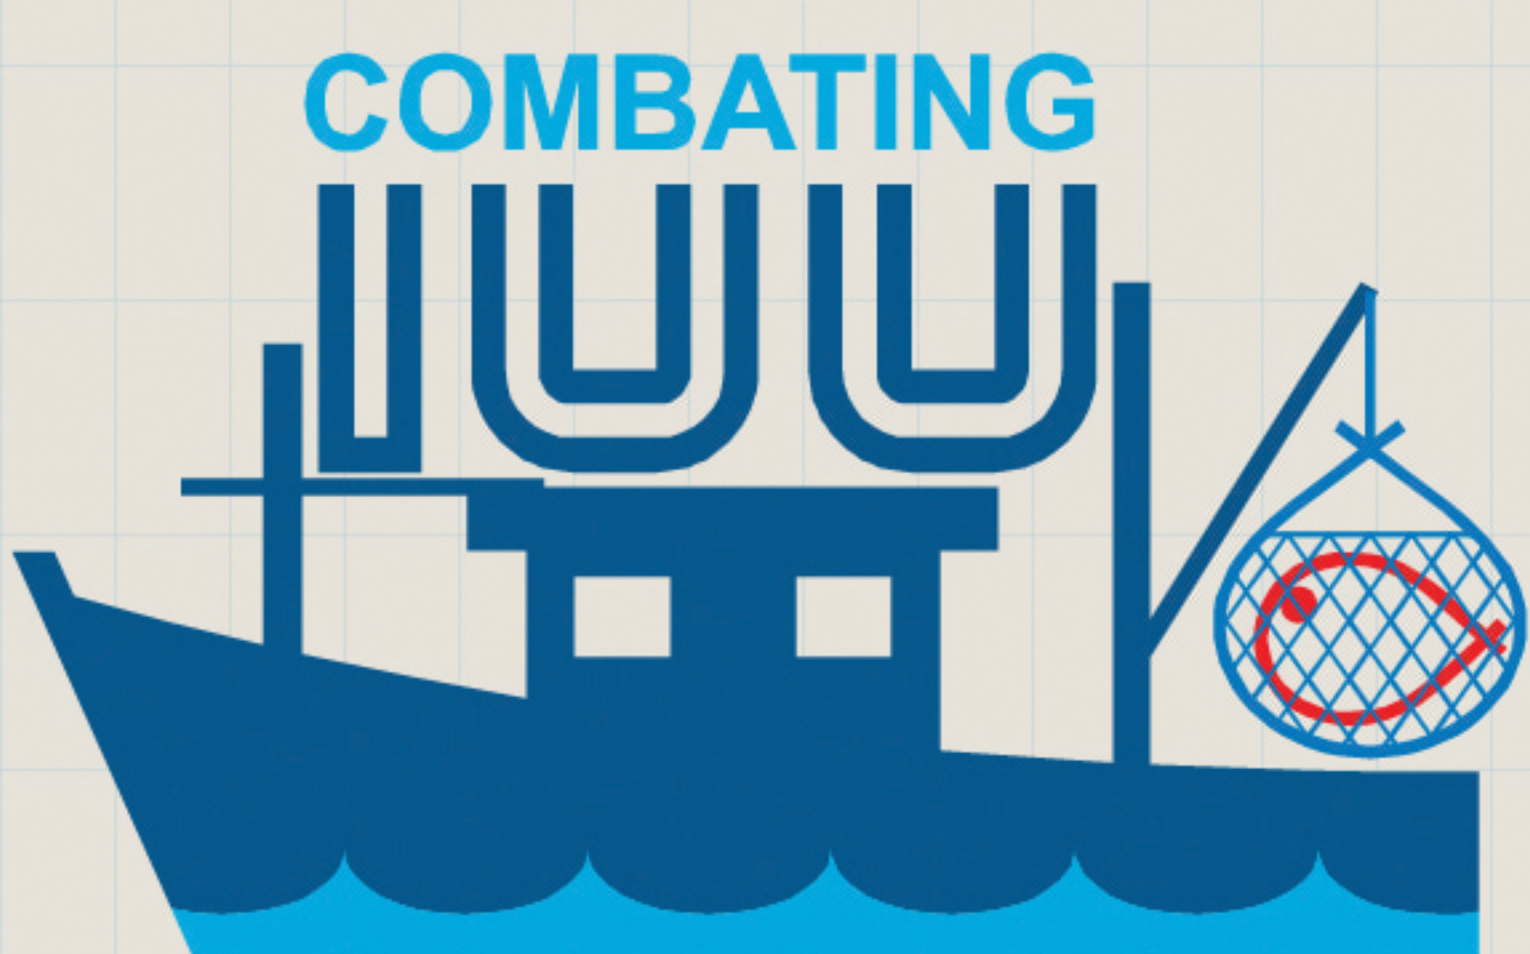

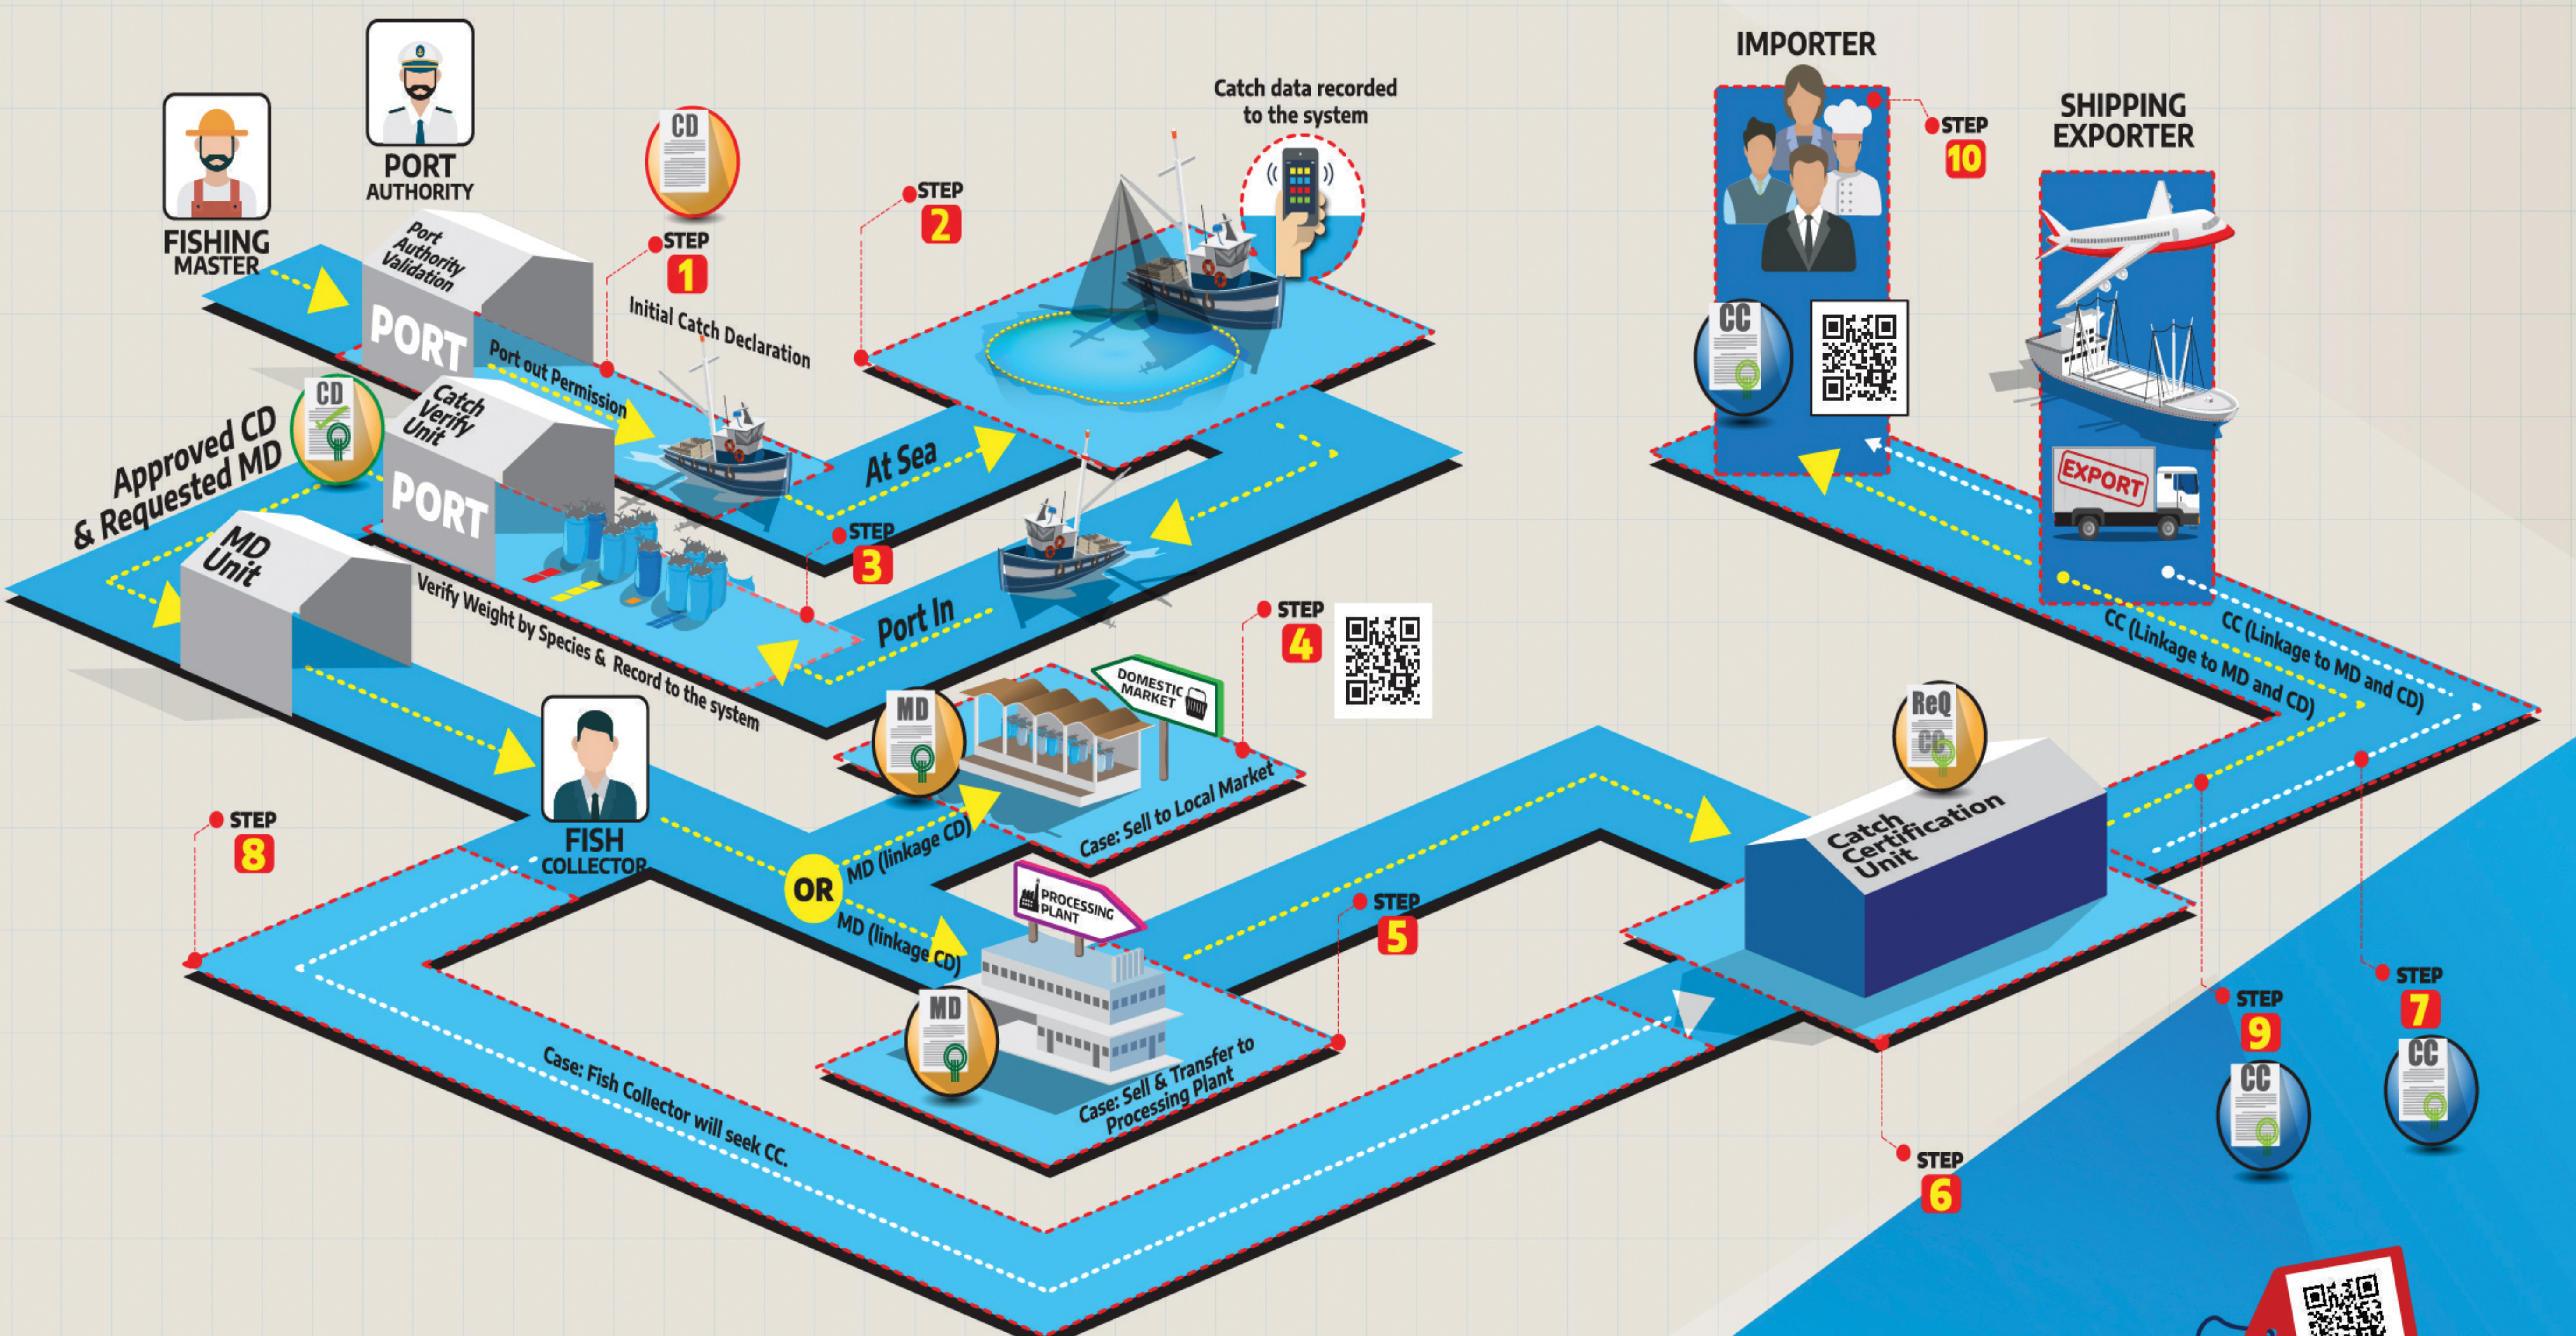

As a tool to Prevent the Entry of Fish and Fishery Products from IUU Fishing Activities into the Supply Chains

Catch documentation schemes (CDS) are market-related measures developed specifically to combat IUU fishing by documenting verifiable information on fish catch from point of capture to the final destination. In the Southeast Asian region, the “**ASEAN Catch Documentation Scheme**” or **ACDS** was developed and launched by SEAFDEC in 2017 as a regional scheme to improve traceability of fish and fishery products and enhance the international trade as well as intra-regional trade among the Southeast Asian countries. To support this implementation, electronic ACDS (eACDS) was developed which comprises web-based and mobile applications and implement as pilot-tested in Brunei Darussalam and has been expanding to other ASEAN Member States (AMSs).

The software generates certificates at each important supply chain such as

- 1) **Catch Declaration (CD)** from point of catch to landing;
- 2) **Movement Document (MD)** from landing to processors or local market;
- 3) **Catch Certification (CC)** from processing to export/import and consumer via QR-Code.
