ADOPTED REPORT

I. OPENING OF THE MEETING

1.1 WELCOME AND OPENING ADDRESS

- 1) Mr. Somboon Siriraksophon, the Project Director, welcomed all scientific and technical committee from participating countries and all participants to the 4th Regional Scientific and Technical Committee Meeting. He mentioned that the meeting had a gender balance as there were 55 percent male and 45 percent female from a total of 46 participants. Recalling the 3rd Regional Scientific and Technical Committee Meeting on 5th-7th February 2020 in Viet Nam, it has been almost one and a half year already. He compared it to nowadays as the meeting environment has changed due to the Covid19 situation. He believed the meeting would be successful due to the active participation, as well as, there would be a good lesson to learn from the countries' presentations.
- 2) Mrs. Praulai Nootmorn, Scientific and Technical Focal Point for Thailand and the previous chairperson for Recalling the 3rd Regional Scientific and Technical Committee Meeting, wished all the members are fine and healthy and be far away from Covid19. She hoped that the work can still go on even though we are facing the Covid19 pandemic.

1.2 INTRODUCTION OF MEMBERS

- 3) Representatives from each participating country and PCU were requested to introduce the members of their team to the meeting. The list of participants is attached as **Annex 1** to this report.

II. ELECTION OF CHAIRPERSON

- 4) The election of the chairperson to the RSTC4 has been done one week before the meeting started through the online survey. Mrs. Praulai Nootmorn announced the election result, which Mr. Ngurah N. Wiadnyana is the chairperson for the 4th Regional Scientific and Technical Committee Meeting.
- 5) After the announcement, the PCU requested all participants for the group photo session

III. ADOPTION OF THE MEETING AGENDA

- 6) Mr. Ngurah N. Wiadnyana, as a new chairperson, requested the members to review the provisional agenda for feedback. Everyone agreed with the provisional agenda. Hence, the agenda was adopted and attached as **Annex 2** to this report.

IV. REPORT OF THE PROJECT DIRECTOR ON PROGRESS WORKS

- 7) The Chairperson invited Mr. Somboon Siriraksophon, the Project Director, to present the report of the progress from 1 Jan 2020 to 30 June 2021. The report shows that there was a total of 70 activities conducted by six participating countries. Cambodia adopted two Fisheries Refugia sites. Other five refugia: one in Cambodia, two in Malaysia, and two in Thailand, are under adoption processes.
- 8) As many countries are already revising fisheries regulation, he would like to highlight that Cambodia adopted the 5-year Action Plan for Marine Fisheries Management Area, including management measures in KEP Province. Also, Cambodia adopted the Strategic Plan for Fisheries Conservation and Management from 2020 to 2029, as well as, Cambodia revised Fisheries Law by including Fisheries Refugia. Moreover, Thailand reformed the law, regulation, management of Fisheries Refugia, and create the Fisheries Refugia Web Portal in Thailand, while Malaysia started to evaluate and identify management measures based on scientific findings.
- 9) For stakeholder consultations, many countries worked well in this activity. Thus, he would only highlight some activities. Firstly, Cambodia conducted four (4) consultations and three (3) field surveys to finalize

the Marine Fisheries Management Area map of the Juvenile Grouper Refugia in Kampot province. Secondly, the Philippines conducted Stakeholder consultations in three priority Refugia sites which specifically aimed to inform and educate the coastal communities on the establishment of the fisheries refugia in each municipality; a total of 413 persons attended. Thirdly, there was a consultation meeting for establishing fisheries Refugia of Penaeid shrimp in West Kalimantan, Indonesia. Lastly, Thailand conducted two (2) stakeholder consultations to finalize the fisheries refugia boundary areas in Trat for short mackerel and Surat-thani for blue swimming crab.

- 10) Another essential target output is a Fisheries Refugia Profile. Currently, there are 6 Fisheries Refugia Profiles, namely
 - ❖ Fisheries Refugia Profile for Short Mackerel in Trat, Thailand
 - ❖ Fisheries Refugia Profile Short Mackerel in Koh Kong, Cambodia
 - ❖ Fisheries Refugia Profile for Blue Swimming Crab in Surat Thani, Thailand
 - ❖ Fisheries Refugia Profile for Blue Swimming Crab in Kep, Cambodia
 - ❖ Fisheries Refugia Profile for Grouper in Kampot, Cambodia
 - ❖ Profiles for the Philippines (draft): including three priority sites
- 11) For Regional Programs, there were three (3) main activities held from January 2020 to June 2021. For example, the 3rd Regional Scientific and Technical Committee Meeting (RSTC3) on 5th-7th February 2020 in Hai Phong, Viet Nam, the 3rd Project Steering Committee Ad-hoc Meeting (PSC3-Adhoc) on 16th June 2020 to adopt the proposed project extension for two (2) years, the 4th Project Steering Committee Ad-hoc Meeting on 6th October 2020 to adopt the budget revision and the cost Workplan for 2021-2022, Information and Knowledge dissemination, and updating Refugia Website.
- 12) Also, he presented the progress of each activity in percentage to show the overall activities. For cumulative expenditures to date, he noted that there were about 1.35 million USD for cumulative unspent balance as of 30 June 2021. Lastly, he presented the co-financing from executed partners as of 30 June 2021, which was around 10.1 million USD. However, there was a commitment with GEF, which was about 12.45 million USD. Thus, he thought that the goal is likely to be achieved as there are still 1.5 years left for the project. The working paper and presentation document is attached as **Annex 3a and 3b** of this report
- 13) The chairperson opened the floor for questions and comments
- 14) There was a question from Indonesia as Mr. Ngurah N. Wiadnyana would like to have a clarification on co-finance. Mr. Somboon Siriraksophon clarified that the co-finance is related to national activities ally with conservation and management of specific target species. This means that every activity related to/supporting the Fisheries Refugia project can be counted in co-finance, either in-kind or cash.
- 15) Mrs. Prulai Nootmorn requested Mr. Somboon Siriraksophon to provide the presentation files, and he agreed to do so.
- 16) All Committees supported the report. Hence, the project director report was adopted.

V. NATIONAL REPORT AS OF 30 JUN 2020, INCLUDING ISSUES, CHALLENGES, AND STRATEGIC PLAN TOWARDS ACHIEVING THE PROJECT TARGET GOALS BY 2022

5.1 CAMBODIA

- 17) Mr. Leng Sy Vann, the RSTC member for Cambodia, shared the national report at the meeting. So far, Cambodia adopted two (2) Fisheries Refugia areas, consisting of Blue Swimming Crab Fisheries *Refugia* at Koh Po, Kep province on 12 April 2018, and Mackerel *Refugia* at Peam Krosob, Koh Kong province on 16 September 2019. However, Grouper Fisheries *Refugia* site at Trapaing Ropaov, Kampot province is still in progress, and Cambodia plans to adopt it in December 2021. In terms of marine habitat linkage,

there are coral reefs, seagrass, and mangrove in three (3) sites. In Kep province, coral reef covers 52 ha, seagrass covers 2,790 ha, and mangroves covers 1,005 ha. In Koh Kong province, coral reef covers 602 ha, seagrass covers 3,993 ha, and mangroves covers 62,000 ha. In Kampot province, coral reef covers 953 ha, seagrass covers 25,000 ha, and mangroves covers 1,900 ha.

- 18) Regarding the Refugia profile, Mr. Leng Sy Vann informed the meeting that Cambodia has completed three (3) Fisheries Refugia profiles in Kep, Koh Kong, and Kampot provinces. He further informed on the delay in the establishment of the Grouper Fisheries Refugia in Kampot due to the overlapped interest between Marine Fisheries Management Area (MFMA) and the Development Company as well as the COVID 19 Pandemic outbreak, the new boundary of MFMA has been revised and sent to Kampot Administration for further consideration and action. Cambodia expects to adopt Marine Fisheries Management Area, including Fisheries Refugia at Kampot province, by the end of 2021. Concerning the willingness of fisheries and environment sectors to agree on the Establishment of Fisheries Refugia, based on his observation, both sectors feel satisfied and happy in the establishment of fisheries refugia for the following purposes: 1) to manage sustainable marine fisheries resources, biodiversity, and ecosystem, 2) to ensure sustainable fish stock, 3) to ensure sustainable fishing to enhance community livelihood depending on the natural resources, and 4) to strengthen the adaptation of climate change.
- 19) In terms of community/stakeholder engagement in establishing Fisheries Refugia and implementing agreed management measures, he informed the meeting that there are several key community/stakeholders involved in this project including the national level, the provincial level, private sector and NGOs. For the national level, there is Fisheries Administration. For the provincial level, there are provincial governor, provincial deputy governor, relevant provincial line departments (i.e. provincial department of agriculture, forestry, and fisheries, provincial department of environment, provincial department of tourism, provincial department of land and construction, provincial department of public works and transports, and so on), provincial police, provincial military police, maritime police, district authorities, commune authorities, fisheries administration cantonment, and provincial hall administration. Moreover, there are private sector and NGOs (i.e. FFI, WCS, IUCN, WEA, and MCC) participating in the establishment of fisheries *Refugia* as well. However, some issues were occurring in the establishment. For example, in Kep province, it was hard to set times for meeting at the provincial level, especially meetings with provincial administration leaders and at the same time, changing provincial governor of Kep could affect the establishment of marine fisheries management area including Blue Swimming Crab *Refugia*. These led to the delay of the establishment process. For Koh Kong province, it was hard to set times for meeting at the province level, especially meetings with provincial administration leaders were delayed five times. In Kampot province, there was an issue in the overlap of the boundary between Marine Fisheries Management Area and Development Company in Grouper *Refugia* area. Thus, the new boundary of the marine fisheries management area, including grouper refugia sites, has been revised and sent to Kampot provincial administration for further action. Furthermore, there is COVID 19 outbreak in the Kampot province.
- 20) To achieve the establishment process, based on Mr. Leng Sy Vann's experiences in Cambodia, there were a few steps at the provincial level and national level. The provincial level did the technical part, including identifying sites, setting a boundary, size, specific waypoints, and preparing maps. Those who can participate at the provincial level are from Provincial Administration, Fisheries Administration, Relevant Provincial Line Departments, Provincial Police, Provincial Military Police, Maritime Police, District Authorities, Commune Authorities, Private Sector, NGOs, and Community Fisheries. On the other hand, the national level focused on the law part. Moreover, there are two levels within the national level which are FiA and MAFF level. At FiA level, the law team from FiA and provincial department of agriculture, forestry, and fisheries attend this national meeting to check and verify the format of proclamation. At the MAFF level, the law team from MAFF and provincial administration join this national meeting to verify and approve the format of the proclamation. In the last stage, the proclamation documents would be sent to the Minister of Agriculture, Forestry, and Fisheries for signature and stamp.
- 21) Regarding the reforming of national policy, legal and regulatory frameworks governing the management of fisheries refugia, he informed the meeting that the concept of fisheries refugia has

been integrated into national fisheries policy and legal basic. Including the Law of Fisheries, National Plan for Action, Plan on combating IUU fishing, ten-year strategy plan for fisheries conservation, and five-year management plan for fisheries conservation, effectively ensure fisheries refugia management. In addition, two (2) proclamations on marine fisheries management areas, including Blue swimming crab Fisheries Refugia at Koh Po and Koh Tonsay Archipelago, Kep province and Mackerel Fisheries Refugia at Peam Krasob. Koh Kong province have been promulgated by Minister of Agriculture, Forestry, and Fisheries. Moreover, two (2) provincial management committees in Kep province and one (1) provincial management committee in Koh Kong province for marine fisheries resource management are formulated by provincial governors to facilitate and address all issues happening at Fisheries *Refugia* sites.

- 22) In terms of the status of enabling environment reform, including the extent of behavioral change among small-scale fisherfolk at refugia sites, he informed the meeting that after the Royal Government of Cambodia making the policy reform of decentralization, the Ministry of Agriculture, Forestry, and Fisheries (MAFF) made decentralization to sub-national to manage natural resources by themselves at the end of 2017. Coincidentally two proclamations on the establishment of marine fisheries management area including fisheries refugia in Kep and Koh Kong provinces are issued by MAFF in 2018 and 2019. In this connection, small-scale fisherfolk at fisheries refugia sites, especially fisheries community, have changed their attitudes in terms of participation in the management of marine fisheries recourse to ensure fish stock and sustainable fisheries resource utility. In particular, community fisheries took part in disseminating closed fishing during spawning season (i.e., mackerel and blue swimming crab), enforcing the law of fisheries and regulation, and patrolling to monitor illegal fishing action happening at refugia sites.
- 23) Fishing boats in Cambodia can be categorized into two (2) categories, which are fishing boats with engines and no engines, according to FiA's statistical data. For fishing boats with an engine, it was divided into four (4) categories depending on the power of their engine. These four (4) categories consisting of less than 10hp, 10-30hp, >30-50hp, and over 50hp. Generally, most fishers in Cambodia have Fishing boats with an engine power of less than 10 hp followed by 10-30hp and the small number of fishers practiced the fishing boats with engine power of 30-50hp and over 50hp. The working paper of Cambodia is attached as **Annex 4** of this report.
- 24) The chairperson opened the floor for questions and comments.
- 25) Mrs. Prulai Nootmorn had a question regarding the situation of the Short Mackerel in Cambodia. Mr. Leng Sy Vann answered that the current status of the Short Mackerel in Cambodia is better than in the past when mackerel refugia site in Koh Kong province was established. Mrs. Prulai Nootmorn thanked Cambodia for the answer.
- 26) In addition to the question section, Mr. Somboon Siriraksophon congratulates Cambodia for successfully implementing and establishing Fisheries Refugia in Cambodia. The critical point that he found was the engagement of stakeholders, as it is an essential key point that meets the target outputs and goals.
- 27) Lastly, Mr. Weerasak Yingyuad thanked Mr. Leng Sy Vann for the presentation. Also, he had a few questions regarding the Fisheries Refugia areas of Blue swimming crabs in Kep province. He would like to have a clarification on how to identify the location. Mr. Leng Sy Vann answered that firstly, we reviewed secondary information and the data related to spawning habitat of blue swimming crab. Then, we visited the site and discussed with Fisheries Administration Cantonment and fishermen about the crab spawning habitat and the piece of information collected. This was consulted and discussed at local level with Fisheries Administration, Fisheries Administration Cantonment, fishermen, community fisheries, local authorities, and NGOs to check and make sure that the site is really the crab spawning habitat. After that, stakeholder consultation meeting at provincial level was held to decide the blue swimming refugia site and its size.

5.2 INDONESIA

- 28) Mr. Ngurah N. Wiadnyana, the RSTC member for Indonesia, informed the meeting that Indonesia has two (2) Refugia sites located in West Kalimantan and Bangka Belitung. In West Kalimantan, Indonesia chose Shrimp (*Fenneropenaeus* spp) as a target species, while the type of Habitat linkage is Mangrove. In Bangka Belitung, Indonesia chose Squid (*Uroteuthis chinensis*) as a target species, while the types of Habitat linkage are coral and seagrass. Both sites are in process. Indonesia had surveyed in the Bangka Belitung area but not yet in West Kalimantan due to the situation.
- 29) In terms of indicators for the West Kalimantan site, the key community/stakeholder includes 1) Local fishing community in West Kalimantan 2) Fishery product collector, trader and exporter 3) Fishery Agency of West Kalimantan Province 4) Fishery Agency of Kubu Raya District 5) Fishery Agency of Kayong District 6) DG of Marine Spatial Planning 7) Local University in West Kalimantan. There were issues in terms of the establishment. This is because Indonesia lacks technical information on critical habitat, especially for the abundance and distribution of mature stage of *Fenneropenaeus* shrimp. Moreover, operations of destructive gears around critical habitats of priority species are existing. Therefore, Indonesia needs to conduct the baseline survey to obtain detailed data and information. Also, Indonesia needs to collaborate with the local university and other institutions to collect data and information about the critical habitat and discuss it with them.
- 30) In terms of indicators for the Bangka Belitung site, the key community/stakeholder includes 1) Local fishing community in Manipur village (Bangka Belitung) 2) Fishery product collector, trader and exporter 3) Fishery Agency of Bangka Belitung Province 4) Fishery Agency of Bangka District 5) Fishery Agency of Bangka Selatan District 6) DG of Marine Spatial Planning 7) University of Bangka Belitung. There were issues in terms of the establishment as Indonesia lacks information on the critical habitat of squid during the spawning period, and there is tin mining in the waters of Bangka Belitung. Thus, the survey will be conducted in Q3 -2021 to obtain information on the critical habitat for the mature stage of squid. Also, an intensive study is needed to figure out the impact of the mining on the ecosystem in the waters of Bangka Belitung, especially on the critical habitat of squids.
- 31) In terms of statistical data, he said that there is no continuous data from the record. There are 9 types of fishing boats in West Kalimantan, including Set gill nets, Drift nets, Trammel nets, Seine nets, Bottom seine nets, Beach seine nets, Danish seine, Set net, and Trap. In Bangka Belitung, to catch Squid, the fishermen use Handline, Gillnet, Trap, and Boatlift net.
- 32) Project activities carried out in 2019-2020 were done to prepare and coordinate how to implement the project, while Indonesia postponed some project activities planned for 2021 due to the Covid19 outbreak situation.
- 33) Mr. Ngurah N. Wiadnyana showed the map of the critical habitat of *Fenneropenaeus* shrimp during a juvenile stage in West Kalimantan in 2015 located in Teluk Batang, Padang Tikar and Ketapang District. Also, he explained the need for further discussion with local universities and local government to fix the sites. The important is to know where the habitat for the spawning ground. For Bangka Belitung, the survey activity was conducted in November 2020 to gain data and information on critical habitat, fisheries, coastal habitat conditions, and the biological aspects of squid (*Uroteuthis chinensis* in Bangka Belitung). The survey was conducted in two Districts: Tuning (Bangka District) and Lepar Pongok (South Bangka District).
- 34) Mr. Ngurah N. Wiadnyana showed the map of the squid fishing ground and its production in the Bangka District. However, he did not know why it was significantly increased and dropped in 2016-2020. The working paper and presentation of Indonesia are attached as **Annex 5a** and **5b** of this report.
- 35) The chairperson opened the floor for questions and comments.
- 36) There was a question from Mrs. Prulai Nootmorn, Thailand, about the type of fishing gear to catch squid. Mr. Ngurah N. Wiadnyana answered that mostly they were caught by handline. According to the presentation, Mrs. Prulai Nootmorn would like to confirm if the squids lay their eggs on the coral reef. Mr. Ngurah N. Wiadnyana answered that he thinks it is a coral reef as squid eggs were collected in 2 coral reef locations. Also, Indonesia would like to predict the spawning period for squids to decide the season for establishing refugia areas. The challenge is that no migration information of the squids.

- 37) Mr. Somboon Siriraksophon informed the meeting that Indonesia initiated the Fisheries Refugia Project in June 2019. Indonesia has faced the impact of the Covid19 situation from the early of 2020 until the present. It is the reason why the project was delayed. Also, Mr. Somboon Siriraksophon had some questions for Mr. Ngurah N. Wiadnyana. As the work plan for 2021 to 2022 was already revised, the project needs to be completed by 2022. Thus, Mr. Somboon Siriraksophon would like to ask for Mr. Ngurah N. Wiadnyana's opinion about the possibility of completing the project within 1.5 years and the strategies that Indonesia could come up with to finish the project on time. The second point is about the list of stakeholders participating in project implementation. He found that most of the participants came from the fishery sector only. To answer Mr. Somboon questions, Mrs. Astri Suryanda clarified that stakeholder engagement in the project is not only the fisheries sector alone; other agencies are also involving in the project implementation, such as the tin mining sector in Bangka Belitung islands. In this connection, Indonesia will update the list of stakeholders involving in the country report. Mr. Ngurah N. Wiadnyana added that to achieve this project by 2022, Indonesia plans to visit the field to discuss with the co-partners, local government, and the local community especially, fishers. After they have an initial draft of the demarcated Refugia areas for both sites, they will consult firstly with the local institutions because the local institutions have the authority to establish the areas. Relating to the central government, the responsible Directorate-General (DG) will decide whether the regulation should be released from the local government or central government.
- 38) Also, the local government is very important as the government can have a meeting with the local community, especially fishers. Mr. Somboon Siriraksophon understood that the local government is an important key institution that communicates with the local community. Therefore, he asked Mr. Ngurah N. Wiadnyana to consider the possibility for the central government to empower the local government to handle activities at the sites as the current Covid19 situation is unpredictable and the central government staff cannot travel to the project sites. Mr. Ngurah N. Wiadnyana stated that there are two (2) problems. The first problem is that the local institution requires support from the central. Secondly, travel restriction does not only have an impact on traveling across the region but also it applies to the inter-provincial level. Thus, as the distance between the local government office and the project sites is long and the restriction for traveling from town to the sites is still valid, it is hard to continue the work. So, he hopes that the situation would be better by September so that Indonesia can continue the work. Due to these, Mr. Somboon Siriraksophon will bilaterally discuss further with the Indonesia team.

5.3 MALAYSIA

- 39) Mr. Sallehudin Bin Jamon, the Regional Scientific and Technical Committee for Malaysia, updated the status of the Fisheries Refugia project in Malaysia. There are two (2) Refugia Sites in Malaysia, located in Tanjung Leman, East Johor for Lobster and Kuala Baram, Sarawak for Tiger Prawn. His presentation focuses on the Spiny lobster site, and Mr. Jamil Bin Musel presents the Tiger prawn site.
- 40) For Tanjung Leman in East Johor, the target species is Spiny Lobster (*Panulirus polyphagus*), and the types of marine habitat linkage in this area are coral and seagrass. Malaysia expected to complete the project by the end of 2022 as there was travel restriction due to the Covid19 pandemic. For both sites, the estimated refugia size was agreeable among members. Malaysia would finalize the adoption process once the Refugia Management Plan is completed, assisted by the University of Malaya as a consultant.
- 41) For progress and status of project implementation in Tanjung Leman, fisheries and environment sectors were willing to agree on the Establishment of Fisheries Refugia. The following activities support the establishment as the results from stakeholder consultation in 2018, the results from the socio-economy survey done in 2020 (Norhanida *et al.*, 2020), etc. The willingness of fisheries and environment sectors to agree on the Establishment of Fisheries Refugia were divided into 1) awareness, 2) the benefits of refugia, and 3) social and environmental protection. In conclusion, around 90 % of fishers agree on the spiny lobster refugia establishment. Therefore, the fishers suggested the Department of Fisheries Malaysia consult beforehand to ensure the consent of all stakeholders involved in this fishery.

- 42) There are three (3) main stakeholders involving in Tanjung Leman, namely East Johor traditional fishers (nearshore), Trawl net operators and fishers (commercial), and Island inhabitants/tourism operators. Moreover, problems in the establishment are unclear/lack of information about the implementation of refugia and its rules and compliance with the “no-take” regulation during specific refugia close season period. Thus, the team will raise stakeholder consultations and public awareness to solve this issue.
- 43) In terms of reforming national policy, legal and regulatory frameworks governing the management of fisheries refugia, DoF/Malaysia will draft the Regulations on the proposed refugia areas after obtaining approvals from State Government. Regulations will focus on regulating allowable and prohibited fishing gears, temporal closure during critical life stages in the areas, development or other activities within the refugia areas, and penalizing encroachment and illegal activities or illegal harvesting.
- 44) For the status of enabling environment reform, including the extent of behavioral change among small-scale fisherfolk at refugia sites in Tanjung Leman, Fishermen's participation in refugia management is vital and urgent. The high degree of trust and understanding between the Department of Fisheries and members of the fishing community may be strengthened and extended so that fishers can rest confident that the Department is truly committed to safeguarding the sustainability of fished resources. For the sustainable use of fisheries resources, the active participation of fishers and fishermen's communities is essential. It will pave the way for co-management that both resource users (fishers) and government agencies (Department of Fisheries) collaborate to address management concerns and share decision-making duties before taking action. The Department of Fisheries has also designed and implemented several educational programs for fisher groups and the public on the importance of working together to safeguard fisheries' resources and livelihood.
- 45) Three (3) types of fishing gears were used in Tanjung Leman in 2005-2019, including drift net, trawlers, and traps. The majority of fishing gear in this area was drift net, in which the number of it was the highest throughout the period.
- 46) The filed surveys show four (4) study locations where the lobster phyllosoma was found with an average of 0.27 ± 0.05 individuals/1000m³. The distribution of lobster phyllosoma was more concentrated around the southeast Johor area near Sungai Rengit.
- 47) Mr. Sallehudin Bin Jamon handed over the presentation to Mr. Jamil Bin Musel to present the remaining part. For tiger prawn research at Kuala Baram, Miri, Sarawak.
- 48) Mr. Jamil Bin Musel, Alternate Regional Scientific and Technical Committee for Malaysia, proudly presented that the project implementation went well. Also, he confidentially informed the meeting that the DoF/Malaysia would complete the project by 2022. However, although Malaysia is also facing Covid19, they will try their best to finish it in time. Thus, after the staff is fully vaccinated, they will continue the pending activities. Continue with the presentation, the types of marine habitat linkage in this area are coral and mangrove. He updated that DOF/MY already drafted the Refugia profile for Tiger prawn and will submit it to the PCU soon.
- 49) For progress and status of project implementation, one consultation program was held with stakeholders and local fishers for Tiger Prawn Refugia in 2017. In 2018, two meetings with stakeholders and other local agencies, such as the Sarawak State Planning Unit, Miri Port Authority, and the Forestry Department, were held to provide information and explanations on the importance of tiger prawn resources and the fisheries department's proposal to make Kuala Baram a tiger prawn fishery refugia. In conclusion, around 90 % of fishers agree on the tiger prawn refugia establishment. Therefore, the fishers suggested the Department of Fisheries Malaysia to conduct consultation beforehand to ensure the consent of all stakeholders involved in this fishery.
- 50) The critical community and stakeholders for Tiger Prawn Refugia are fishermen and Miri Port Authority. There were some issues regarding the establishment due to the levels of awareness/understanding of the benefit of tiger prawn refugia and that there was usage conflict-overlap of refugia areas, and there was development for expansion of a shipping port in Kuala Baram. The above issues were raised and

discussed at the national seminar held in April 2021. To achieve this, there would be an explanation from the Department of Fisheries and a meeting with Miri Port to find a win-win situation.

- 51) In addition, reforming national policy, legal and regulatory frameworks governing the management of fisheries refugia is in progress.
- 52) In terms of the status of enabling environment reform, including the extent of behavioral change among small-scale fisherfolk at refugia sites, fishermen's participation in the management of refugia is vital and urgent. The situation in the tiger prawn site is similar to the spiny lobster refugia site. The high degree of trust and understanding between the Department of Fisheries and members of the fishing community may be strengthened and extended so that fishers can rest confident that the Department is genuinely committed to safeguarding the sustainability of fished resources.
- 53) Considering the statistical data in Kuala Baram, Miri, the proposed refugia area covering zone A (0-5 nm) where only traditional fishing gears which fishermen use mainly drift net. The situation was after Malaysia changing the policy by shifting trawlers to operate beyond 10 and 15 nautical miles. Currently, there is no trawl net in the area. The working paper and presentation of Malaysia are attached as **Annex 6a and 6b** of this report.
- 54) The chairperson opened the floor for questions and comments.
- 55) Mr. Somboon Siriraksophon sought more elaborations on the selection of the Refugia area for Spiny Lobster. He mentioned that the proposed refugia area is quite far from the coastal area, which stage of Spiny Lobster's life cycle that Malaysia wants to protect. Also, the survey results show many larvae of Spiny Lobster distributed near the coastal area, where it was not selected as the Refugia site. So, he would like to know, "is there any push net operating in the coastal area?"
- 56) To answer the questions, Mr. Sallehudin Bin Jamon identified that Malaysia focuses on Spiny Lobster in the spawn stage. Also, he explained why the Refugia area is far from the coastal area. It is because Spiny Lobsters (spawners) live in that area. He also explained why larvae had not been chosen. As they can move everywhere due to currents, so it is hard to identify the location. For push net, he explained that there is no push net operated in that area.
- 57) In addition to the questions for Mr. Sallehudin Bin Jamon, Mr. Somboon Siriraksophon wants to know the Miri Port Authority's role in establishing Tiger prawn Fisheries Refugia. So, he asked Mr. Jamil Bin Musel for explanation.
- 58) Mr. Jamil Bin Musel explained that as there is a shipping industry in the area, one of the key stakeholders. They are still in the discussion process; however, the process would be delayed due to the Covid19 situation. Thus, he could not confirm the role yet.
- 59) Mr. Ngurah N. Wiadnyana wanted to know why Malaysia considers only the spawn stage, not the entire life cycle. Mr. Sallehudin Bin Jamon explained that Spiny Lobster's life cycle is very long; it is hard to control fishing for the whole life cycle. Hence, choosing to protect the critical period, which is the spawn stage, would be a proper choice.

5.4 PHILIPPINES

- 60) Mr. Valeriano M. Borja, a Regional Scientific and Technical Committee for the Philippines, presented the national report to the meeting. Three (3) Fisheries Refugia sites in the Philippines are located in Bolinao, Coron, and Masinloc. For Bolinao, Siganidae is the target species, and the type of marine habitat linkage is seagrass. NFRDI already demarcated and marked the refugia area in Bolinao but did not calculate the size in ha.
- 61) It is still in the process for the Coron refugia site, which has *Casio cunning* and *Decapterus maruadsi* as the target species. The habitat in this area is mangroves.
- 62) For the Masinloc refugia site, *Auxis thazard*, *Pterocaesio teselleta*, and *Sardinella fimbriata* are the target species. The types of marine habitat linkage are coral reefs and seagrass.

- 63) The draft fisheries profiles for three refugia sites have been done; however, there would be an update for the profiles later.
- 64) Mr. Valeriano M. Borja expected to complete all work plans by the end of 2021, and NFRDI will conduct some meetings to finalize the reports in 2022.
- 65) Based on the past activities, such as committee meetings, on-site stakeholder consultations, and information-drive organized during 4 years in 2017 to 2021, the results reflected the willingness of the stakeholders engaged in the project implementation. Also, there is high acceptance as the local government units, including the coastal communities, environmental groups, and other stakeholders, have agreed and understood the importance of establishing Fisheries Refugia in 3 sites.
- 66) All three Refugia sites have similar stakeholder engagement, except for the Coron area with indigenous peoples involved in the project site. At the Bolinao site, with the support from Mr. Noel Barut as senior fishery expert, and consultant to the project, there are not many issues in implementation. For the Coron site, there was a problem in terms of arranging activities due to lockdowns. However, NFRDI will continue activities soon after the situation is getting better. For Masinloc, the issue was that the Local Government Unit (LGU) requested an LoA with NFRDI to enhance the effective collaboration in the establishment of fisheries refugia in the area. Thus, the NFRDI prepared an LoA for consideration and review by the LGU before the agreement.
- 67) In lieu with the experience on the change of fisherfolk attitude, there was positive feedback from the LGU, especially from the fishing community after introducing the fisheries refugia concept in three sites. Through the information drive and community consultations, the suggestions and questions from the coastal communities were addressed and answered. The fisherfolk had strong disagreements with the establishment of MPAs in their municipalities; however, through the workshops, they have understood the difference and the boon of establishing fisheries refugia for a more productive fishing stock. With proper guidance and continued technical support, the fisherfolk began to understand the importance of protecting the two (2) major life stages of fishes which could significantly improve the fishing stock of the community in the future.
- 68) In terms of fishing boats, Bolinao had the largest number of boats, while Coron was the lowest because most fishers in Coron are not using their boats for fishing anymore, but for tourist transportation instead. However, fishing boat numbers need to be updated.
- 69) Lastly, Mr. Borja showed the proposed maps for the Refugia site. The working document of the Philippines is attached as **Annex 7** of this report.
- 70) The chairperson opened the floor for questions and comments.
- 71) Mr. Somboon Siriraksophon congratulated Mr. Valeriano M. Borja for the map results of the fisheries refugia. He also requested the Philippines to calculate the Refugia area size in ha and update it in the country report for reference.
- 72) There was a question from Mr. Weerasak Yingyuad regarding selecting target species in Coron as the last meeting Mr. Valeriano M. Borja mentioned about Mangrove Jack. Mr. Weerasak would like to know more about it if there is extra information. The question was clarified by Ms. Raziell Ares, on changing the target species in Coron. She also informed the meeting that the issues would be discussed further at the site-based management board for finalizing.

5.5 THAILAND

- 73) Mrs. Prulai Nootmorn, the Regional Scientific and Technical Committee for Thailand, presented the country report to the meeting that Thailand has two (2) priority Refugia sites for two (2) species, namely short mackerel in Trat and Blue swimming crab in Surat Thani provinces.
- 74) The marine habitat linkages in Trat province are coral, mangroves, and seagrass. But in the Surat Thani site, the habitat linkages are only mangrove and seagrass.
- 75) At each project site, DOF/Thailand works with many partners from different inter-agency organizations, non-governmental organizations, universities, etc. To achieve the project in Trat, the DOF proposed

the proposal for short mackerel Fisheries Refugia to the Provincial Fisheries Management Committees. The committees have agreed to regulate and prohibit purse seine nets, pair trawls, and mackerel gill nets operating in the Fisheries Refugia area during the close seasons. However, further information from the Rayong Marine Fisheries Research and Development Center about the impacts of the prohibition of mackerel gill net's operation during the close seasons is needed. She also informed the meeting that the impact topic would be discussed further in the next NSTC meeting.

- 76) For Surat Thani, the DOF also proposes the Fisheries Refugia area for blue swimming crab to the provincial fisheries management committees for further consideration and action to prohibit fishing gears such as crab trap, shell fishing without engine in the conservation area. However, there were some delays in action in both areas due to the Covid19 situation.
- 77) In terms of national policy, legal and regulatory frameworks governing the management of fisheries refugia, Thailand has reformed many regulations; for example, In Royal Ordinance on Fisheries, B.E. 2558 (2015), Royal Ordinance on Fisheries (No. 2), B.E. 2560 (2017) and Marine Fisheries Management Plan of Thailand 2015 - 2019 (FMP).
- 78) For the Status of enabling environment reform, Thailand has followed the Fisheries Refugia Management Framework, which includes the coordination of national and local management committees and stakeholder consultation. In the meetings of site-based management boards and workshops for stakeholder consultation, the fishers showed their positive attitude in managing and conserving fisheries resources in their corresponding fishing grounds; they also relied on the technical information for any decision on management planning. The DOF/Thailand, thanks to the national fisheries management policy that there has been an urge for registration of the Local Fishing Community Organizations, which enhance the mechanism for fishers to share their opinions, comments, and attitudes. For Thailand, the activities of stakeholder participation in the fisheries refugia implementation have played a significant role in enhancing the excellent attitude of fishers on community-based management, resulting in the smooth adoption of the refugia concept, site boundaries, and management measures. Fishers also showed their obvious willingness to participate in technical data collection and at-sea surveys of geographic location for fisheries refugia boundary, contributing to their acceptance of the establishment of fisheries refugia in their corresponding areas.
- 79) Regarding statistical data on fishing vessels from 2005 to 2020, the fishing gears in Trat and Surat Thai provinces are mostly small-scale fisheries, but there are some commercial fishing gears. The working document of Thailand is attached as **Annex 8** of this report.
- 80) The chairperson opened the floor for questions and comments.
- 81) Mr. Somboon Siriraksophon congratulated Thailand for the achievement and added that Thailand has already developed the web portal for the national Fisheries Refugia project, and the web portal has been linked with the regional refugia website.

5.6 VIET NAM

- 82) Mr. Nguyen Thanh Binh, the Regional Scientific and Technical Committee for Viet Nam, informed on progress works and challenges during the past years. He did not follow the report template as other countries did because D-Fish would like to seek approval on the amendment of the project document to adjust what they have drafted for Fisheries Refugia sites in three (3) provinces. He then wanted to share information about preparing four (4) contracts for four (4) activities to be signed with consultants in 2020. There were four (4) activities that have been implementing. The first is that Viet Nam elaborated the profiles of fisheries and habitats for three (3) refugia sites, namely Bach Long Vy, Hon Cau, and Phu Quoc. Secondly, utilization of scientific and local knowledge was done to identify borders of fisheries Refugia sites. Moreover, new provisions of new Fisheries law was promulgated to support the fisheries refugia establishment. Lastly, Viet Nam elaborated national guidelines on procedures for the establishment and management of Fisheries Refugia.

- 83) Mr. Nguyen Thanh Binh also informed that the consultants had submitted the reports; however, with the change of financial management regulations promulgated by the Ministry of Finance, the payment could not be made, and the contracts were canceled.
- 84) Currently, Viet Nam is submitting the amendment and overall project implementation plan to the Ministry of Agriculture and Rural Development (MARD) for approval. The reasons for amendments are the new provisions of Fisheries Law relating to the management of fisheries resource protection sites which are equivalent to Fisheries Refugia sites; the status of resources and habitats at the sites compared to that in the project document elaborated over 10 years ago; the change of mandates of competent authorities to manage the Fisheries Refugia sites; the change of financial management regulations; and the project budget revision and extension of implementation.
- 85) To achieve the outcomes of the project within 1.5 years, Viet Nam came up with the following project implementation strategies:
- ❖ Viet Nam would include all sites in the master plan, which would be approved by Prime Minister, for fisheries resources protection and exploitation.
 - ❖ Site selection would be made in close consultation with the provincial Department of Agriculture and Rural Development.
 - ❖ Many activities would be implemented simultaneously, and D-fish is trying to put more implementations at the central level, where there are more capable human resources available for the assignment. This would be slightly different from the original plan as Viet Nam is trying to balance the works between local and central levels.
 - ❖ More involvement from two main institutions, namely: RIMF and VIFEP, and others (IMER, VNIO, NGOs, and UNDP)
 - ❖ There would be more active involvement from the local fisheries administration and fishing communities.
- 86) The chairperson opened the floor for questions and comments
- 87) Mr. Somboon Siriraksophon thanked Mr. Nguyen Thanh Binh for updating the situation and work progress in Viet Nam, including the implementation strategies. Also, he asked how long it takes for the approval process by MARD. Thus, he proposed to have further discussion with Viet Nam later to determine the support to Viet Nam. To answer Mr. Somboon's question, Mr. Nguyen Thanh Binh thought that it would soon get approval from MARD, and after that, it would go to the process of overall project implementation plan for the remaining time. Also, he agreed to have further discussions with PCU.
- 88) In addition, Mr. Ngurah N. Wiadnyana asked that has Viet Nam decided the target species? Mr. Nguyen Thanh Binh answered that there were candidate species for each site. However, areas planned for Fisheries Refugia overlapped with MPA. Thus, the new locations for Fisheries Refugia are needed, and the project will identify target species later.
- 89) The presentation of Viet Nam is attached as **Annex 9** of this report.

VI. OTHER MATTER

6.1. CONTENTS OF THE INDICATORS OF SUSTAINABLE MANAGEMENT OF FISHERIES REFUGIA

- 90) Mr. Somboon Siriraksophon introduced the background on developing the indicators of sustainable management of fisheries refugia by referring to the past regional workshop conducted in September 2019. He informed the meeting that the objectives of the indicator guidelines are to support the participating countries in selecting the indicators for the effective management of fisheries refugia established during the project implementation. After the project-end, the government shall continue and increase the number of fisheries refugia in their country. He reiterates the need to develop the 1st

draft guidelines by the end of 2021 for further consideration and adoption by both RSTC and the Project Steering Committee (PSC). He then proposed the contents of the guideline for information and review, suggestions by the Committee.

- 91) The main contents of the guidelines could be summarized as follows: Chapter 1 on introduction consists of three sub-chapters concerning the concept of sustainable development and how application to the management of fisheries refugia, including the purpose of the indicators. Chapter 2 on Sustainable Management of Fisheries Refugia System consists of developing and adopting the framework, including specifying criteria and objective-related indicators. Chapter 3 on indicators and target reference points is divided into five pillars of the indicators: ecosystem, social aspects, economic aspects, governance, and climate change and disaster. The working paper and presentation are attached as **Annex 10**.
- 92) The chairperson opened the floor for questions and comments
- 93) Mrs. Prulai Nootmorn sought clarification from the PCU on one of the project outputs that indicated the need for a 50% reduction of fishing pressures in the established fisheries refugia area. Mr. Somboon Siriraksophon replied that based on the scientific-based management measures from the study will directly answer how to reduce the pressures from fishing activities. Referring to the Thailand presentation, DOF/TH will not allow mackerel gillnet to operate in the refugia areas due to its impact on the short mackerel spawner. It means DoF/Thailand can reduce 100% of fishing pressures from mackerel gillnet in the refugia area.
- 94) Mr. Ngurah N. Wiadnyana reiterated the same question that it is challenging to reduce fishing vessels in Indonesia. However, Mr. Somboon Siriraksophon responded that the establishment of fisheries refugia requires management measures linked to the findings from scientific data and local knowledge analysis. There are many approaches in reducing the fishing pressures to maintain and protect target species in the refugia areas.
- 95) After deliberation, the Committee took note of the proposed contents of the Regional Guidelines on Indicators for Sustainable Fisheries Refugia Management to be drafted by the PCU.

6.2 REGIONAL ACTION PLAN FOR MANAGEMENT OF TRANSBOUNDARY SPECIES, INDO-PACIFIC MACKEREL (RASTRELLIGER BRACHYSOMA) IN THE GULF OF THAILAND SUB-REGION

- 96) Mr. Somboon Siriraksophon updated the Regional Action Plan for Management of Transboundary Species, Indo-Pacific Mackerel in the Gulf of Thailand Sub-region (RAP-Mackerel) after it was drafted through the Regional Consultation in September 2019. He informed the Committee that SEAFDEC Council adopted the RAP-Mackerel and suggested to SEAFDEC to address this regional policy under the ASEAN policy framework. The RAP-Mackerel was later endorsed at the Fisheries Consultative Group of the ASEAN-SEAFDEC Strategic Partnership (FCG/ASSP) in November 2020 and further consideration by the ASEAN Sectoral Working Group on Fisheries (ASWGF) in mid of 2021.
- 97) Considering the objective of the RAP-Mackerel is to enhance the improved management policy of critical habitats for fish stocks of transboundary significance, the PCU pointed out the RAP-Mackerel is not for only established refugia countries to implement. However, it is for all Southeast Asian countries. He then requests all participating countries to consider and apply the RAP-Mackerel to develop the National Action Plan for Indo-Pacific Mackerel. The working paper is attached as **Annex 11** to the report.
- 98) After deliberation, the Committee took note of the updated status of the RAP-Mackerel.

6.3. REGIONAL TRAINING/WORKSHOP FOR IDENTIFICATION OF FISH LARVAE AND EXPECTED OUTPUTS

- 99) Mr. Somboon Siriraksophon introduced the requests for capacity building on Larval Fish Identification and Fish Early Life History Science to support all participating countries in implementing and establishing fisheries refugia. SEAFDEC organized two Regional Training / Workshops in 2007 and 2008 under the GEF/UNEP project "Reversing Environment Degradation Trends in the SCS and GoT due to

the lack of researchers/experts on larval fish identification and fish early life history science in Southeast Asia. However, many countries are still facing the same issues on larval fish identification as well as a lack of crucial identification guide and fish early life history science. At the RTSC2 held in Cambodia, regional experts suggested that all participating countries present larval fish identification up to genus or species level rather than end with family level. Per this suggestion, the RSTC2 required Regional Training to support participating countries in keying and identifying larval fish samples to genus and species levels.

- 100) In collaboration with SEAFDEC/Training Department, the issues were considered: the program and syllabus were drafted with the support of Mr. Yoshinobu Konishi – fishery expert, and Mr. Sukchai Arnupapboon - Acting Head of Research and Development Division. The Refugia PCU prepared \$10.45k to support the training. However, the Covid-19 pandemic situation has limited the traveling since 2020 until the present. The PCU cannot organize the proposed Regional Training / Workshop planned in 2020 until the present. The PCU also expects that no training /workshop would be conducted by the end of 2021.
- 101) The PCU wanted to consult with the RTSC4 to either cancel the proposed training program or continue the program after the covid-19 becomes a better situation. In case of cancellation of the training program, the PCU proposed to spend the budget for other activities such as producing the larval fish identification guide. The working paper and presentation are attached as **Annex 12**.
- 102) The chairperson opened the floor for questions, comments, and decisions on this issue.
- 103) Mr. Ngurah N. Wiadnyana thanked the PCU for introducing and raising the issues on conducting the Regional Training/Workshop; he hoped the PCU will continue the Regional Training Workshop before the project ends in 2022. But if the situation of Covid-19 is still bad as it is, he also supports the production of the larval fish identification guide because of the lack of larval fish identification guide and references in Indonesia.
- 104) Mr. Jamil Bin Musel, on behalf of the DOF/Malaysia, supports conducting the Regional/Workshop on Larval Fish Identification. He mentioned the lack of experts on this field in the DOF/Malaysia due to their retirement, while implementing and establishing fisheries refugia in-country requires experts to work on this field. He also considers the project to end by 2022 and hopes the covid-19 pandemic will be softened and over soon.
- 105) Mr. Valerianno M.Borja enquired views from the PCU; if the Regional Training /Workshop would be conducted in 2022, where the venue would be for this activity.
- 106) Mrs. Astri Suryandari, the Refugia team and senior researcher on larval fish identification from Indonesia, supports the Regional Training Workshop on larval fish identification to be conducted in 2022.
- 107) Mr. Somboon Siriraksophon responded to the chairperson, Mr. Jamil Bin Musel, and other speakers that he has consulted with the SEAFDEC Training Department, Mr. Sukchai Arnupapboon, and Mr. Yoshinobu Konishi on the possible period in Q2-Q4 2022. The appropriated period should be before November 2022 and before the project ends because the Regional Training Program is an independent activity on knowledge transferring, not relates to any policy matter. He then concluded to maintain the Regional Training/Workshop, would be conducted in 2022. He then suggests the meeting deciding again in the 1st quarter of 2022 on conducting the Regional Training/Workshop and how to move onward.
- 108) After deliberation, the Committee took note of the meeting decided to keep and revisit the proposed Regional Training/Workshop in Q1/2022.

6.4. MID-TERM REVIEWS

- 109) Mr. Somboon Siriraksophon updated the status of the Mid-term Review of the SEAFDEC/UNEP/GEF Project: “Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and the Gulf of Thailand. He informed the meeting that the PCU received comments and suggestions from SEAFDEC and UNEP Task Manager on the 1st draft Terms of Reference (ToR) of the Mid-Term

Review in mid-July 2021. The Mid-term Review consultant will be selected and recruited by SEAFDEC with UNEP task manager and project director support.

- 110) By signing the service contract with SEAFDEC, the consultant must certify that they have not been associated with the design and implementation of the FR Project in any way which may jeopardize their independence and impartiality towards project achievements and project partner performance. The period of mid-term review is three months. The schedule for the Mid-term Review is finalized soonest before the official announcement via the SEAFDEC Website. The working paper and presentation are attached as **Annex 13**
- 111) The participating countries are welcomed to share the TOR with national and regional experts to apply for this job.
- 112) Mr. Jamil Bin Musel sought clarification on how to conduct the mid-term review for the project that some participating countries have implemented since the project was initiated in 2017, but some countries just started in 2019. Regarding this, Mr. Somboon Siriraksophon informed the meeting that it is not a matter of different time to initiate the project implementation by country. The evaluator should come up with overviews based on each country's outputs and outcomes. The results from the evaluator may include advice on ways forward in each country to ensure the final target goals.

6.5. OTHERS

- 113) Mr. Alza Rendian, the Cooperation Analyst from Indonesia, informed the meeting on the progress on preparation for the extension of LOA that after the related Division received the draft LOA from SEAFDEC Secretariat, they already communicated internally on this matter. He informed the meeting of the difficulty of having a meeting with responsible persons for finalizing the LOA. However, he promises that after this RSTC4 meeting, the responsible division will coordinate with the Alternate SEAFDEC Council Director to accelerate the process of the extension of LOA. Regarding this, the PCU noted the situation and progress on the extension of the LOA. The PCU will further report to SEAFDEC responsible persons.
- 114) Mr. Yoshinobu Konishi referred to the challenges on larval fish identification of some species targeted in the fisheries refugia project, such as *Rastrelliger* spp., *Siganus* spp., some species of Lutjanidae and so on. He informed the meeting that to date, most of them can be morphologically identified down to the genus level, but it is difficult to determine the species name. In this connection, the next Regional Training/Workshop will aim to classify the above-mentioned fish larvae and juveniles as low taxa as possible. He also informed the meeting that the past four training /workshops focused only on larval fish identification, but the next training will include the conduct of case studies on the “Fish Early Life History Science Study” with references.
- 115) Before the end of the agenda, Mr. Somboon Siriraksophon informed the meeting to consult with Mr. Yoshinobu Konishi and 6 participating countries on the numbers of attendees to the training workshop. If there are many attendees, the PCU will need to recalculate the required budget for this training/workshop and inform the next RSTC meeting and PSC meeting for consideration.

VII. DATE AND PLACE OF THE 5TH REGIONAL SCIENTIFIC & TECHNICAL COMMITTEE MEETING

- 116) The PCU proposed the RSTC5 in April 2022. For the meeting venue, the PCU will consider the covid-19 situation and consult with the committee later.
- 117) The meeting adopted the proposal made by the PCU to meet the next RSTC5 in April 2022.

VIII. CLOSURE OF THE MEETING

- 118) Mr. Ngurah N. Wiadnyana, a chairperson of the RSTC4, thanked all Committee and participants for active participation. He hopes the covid-19 situation in next year becomes better for the next meeting

to have a face-to-face meeting. After his speech, he invited Mr. Isara Chanrachkij to declare the meeting closure.

- 119) Mr. Isara Chanrachkij gave a closing remark on behalf of Madame Malinee Smithrithee, the SEAFDEC Secretary-General and concurrently the Chief of the Training Department. He conveyed her appreciation for all effort and hard work that all committee members have done for the project, including several target outputs that ensure sustainable management and habitat conservation at both national and regional levels. He believes the fisheries refugia concept will enhance the achievement of Regional common goals in sustainable fisheries management because the project component covers all five pillars of sustainable development: ecosystem, socioeconomic aspect, social aspects, governance, and emerging issues. Before the end of his closing remarks, He again conveyed madame Secretary-General message on sincere appreciation to the PCU staff for hard work preparing for the meeting. She wishes all are healthy and safe from Covid-19. He then declared the meeting close at 1.05 pm.
-

ANNEX 2 ADOPTED AGENDA

1. OPENING OF THE MEETING
 - 1.1 WELCOME AND OPENING ADDRESS
 - 1.2 INTRODUCTION OF MEMBERS
2. ORGANISATION OF THE MEETING
 - 2.1 ELECTION OF OFFICERS FOR 2021
3. ADOPTION OF THE MEETING AGENDA
4. REPORT OF THE PROJECT DIRECTOR ON PROGRESS WORKS
5. NATIONAL REPORT AS OF 30 JUN 2020, INCLUDING ISSUES, CHALLENGES, AND STRATEGIC PLAN TOWARDS ACHIEVING THE PROJECT TARGET GOALS BY 2022
 - 5.1 CAMBODIA
 - 5.2 INDONESIA
 - 5.3 MALAYSIA
 - 5.4 PHILIPPINES
 - 5.5 THAILAND
 - 5.6 VIET NAM
6. OTHER MATTER
 - 6.1 CONTENTS OF THE INDICATORS OF SUSTAINABLE MANAGEMENT OF FISHERIES REFUGIA
 - 6.2 REGIONAL ACTION PLAN FOR MANAGEMENT OF TRANSBOUNDARY SPECIES, INDO-PACIFIC MACKEREL (*RASTRELLIGER BRACHYSOMA*) IN THE GULF OF THAILAND SUB-REGION
 - 6.3 REGIONAL TRAINING/WORKSHOP FOR IDENTIFICATION OF FISH LARVAE AND EXPECTED OUTPUTS
 - 6.4 MID-TERM REVIEWS
 - 6.5 OTHERS
7. DATE AND PLACE OF THE 5TH REGIONAL SCIENTIFIC & TECHNICAL COMMITTEE MEETING
8. CLOSURE OF THE MEETING

ANNEX 3A REPORT OF THE PROJECT DIRECTOR ON PROGRESS WORKS

Executive Summary

The executive summary highlights the progress works during January 2020 to June 2021 by all executing partners including SEAFDEC. All 66 main activities were reported including the planned outputs such as 10 fisheries profiles, 3 revised regulations and fisheries management plans, drafting of the national action plan, two adopted fisheries refugia in Cambodia together with a total of 4 tentative fisheries refugia in Malaysia and Thailand, etc. The activities-based progress works are identified in percentage to indicate the status of works of each project activities. A total of expenditure incurred and co-financing from the executed partners as of 30 June 2021 are presented.

ACTIONS BY THE RSTC4 COMMITTEE:

- ❖ Take notes, consideration and suggestion to the executed partners and the PCU for further actions to achieve the target goals by end of 2022.
- ❖ To endorse this report.

I. INTRODUCTION

The project entitled "Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and the Gulf of Thailand" is working with communities and governments to integrate habitat and biodiversity conservation considerations into fishery management and practices. The initiative is financed by the GEF, implemented by UNEP, and executed regionally by SEAFDEC in partnership with the Fisheries Departments of Cambodia, Indonesia, Malaysia, Philippines, Thailand, and Vietnam. Four countries, namely Cambodia, Malaysia, Philippines, and Thailand, have signed a Letter of Agreement with SEAFDEC and commenced project implementation in 2017. Indonesia and Vietnam signed the agreement in 2019. Before the project started, the institutional framework and implementation arrangements are needed to support the project implementation. Each country partner sets up the committees, including the National Steering Committee, National Scientific and Technical Committee, and Site-based Management Boards, to support and ensure the implementation meets the project's long-term goals. This report updates the achievements in 2020 until 30 June 2021, including 66 activities conducted by country partners and three regional meetings by SEAFDEC/PCU.

II. PROGRESS WORKS SUPPORT THE ESTABLISHMENT OF 15 REFUGIA SITES

1) CAMBODIA

Three priority fisheries *refugia* sites consist of 1) **Blue swimming crab** (*Portunus pelagicus*) *refugia* site locates in KEP Province, 2) **Juvenile groupers**, particularly Orange-spotted grouper (*Epinephelus coioides*) *refugia* site locates in KAMPOT Province, and 3) **short mackerel** (*Rastrelliger brachysoma*) *refugia* site locates in KOH KONG Province. The government approved two *refugia* sites in Koh Kong and Kep Provinces in 2019. During a period from January 2020 until June 2021, twenty-seven main activities were carried out to support the effective management of approved *refugia* sites in Koh Kong and Kep provinces, including the activities for establishing of Kampot *Refugia* sites. The highlight activities are as follows:

- Review and drafting of the 5 Year Management Plan for Marine Fisheries Management Area (Fisheries *Refugia*) in KEP Province through various activities including the stakeholder consultation, committee meetings. In June 2020, Government of Cambodia adopted the 5 year Action Plan for Marine Fisheries Management Plan in Koh Po and Koh Tonsay Archipelago, Kep Province. Two activities were

focused on the baseline/field surveys to support the drafting of Fisheries Profile for Blue swimming crab in Kep.

- Dissemination of MAFF's proclamation on the creation of short mackerel fisheries refugia at Peam Krasob, Koh Kong Province. Many activities to support the implementation such as: 1) develop and implement the enforcement program for the closing season of short mackerel at Peam Krasob, Koh Kong Province; 2) drafting the Action Plan for short mackerel refugia management at Peam Krasob, Koh Kong Province; and 3) continuing the baseline surveys, biological data samplings, mapping, waypoints collection at sea, mooring buoy installation, local consultations, and joining events against IUU Fishing, etc. A total of 14 activities were conducted during the period.
- In Kampot Fisheries Refugia Site, four stakeholder consultations and three field surveys were conducted with aimed to finalize and prepare the Marine Fisheries Management Area map of the Juvenile Grouper Refugia in Kampot province. The collective information from the filed survey is also used for drafting the Fisheries profile of the Grouper Refugia in Kampot Province.
- FiA, led by the Department of Fisheries Conservation (DFC) published the Fisheries Refugia Profiles:
 - for Indo-pacific mackerel in Koh Kong Province,
 - for Blue swimming crab in Kep Province and
 - for juvenile grouper in Kam Pot province.

2) INDONESIA

Two priority fisheries refugia sites selected in 2019 consist of 1) Mitre squid (*Uroteuthis chinensis*) refugia site locates in Bangka Belitung (islands) Province, and 2) Indian white shrimp (*Fenneropenaeus indicus*) refugia site locates in West Kalimantan Province. During a period from 2020 until 30 June 2021, the COVID-19 pandemic limited transportation across the provinces where the refugia sites are located. Regarding this, AMFRHR conducted seven activities (not included Q2 due to no reporting) as follows:

- The National Fisheries Refugia Committee Meeting (NFRC) was held in February to finalize the 2020 and onward work plan for several consultations and site surveys. The NFRC also discussed and agreed on hiring a consultant company as local project management supporting unit.
- The project team met with the Directorate General of Marine Spatial Management, MMAF, to discuss and the fisheries refugia characteristic in the MPA regulation.
- Conducted the outreaching scientific community and stakeholders through a virtual seminar on 'Fisheries Refugia for Sustainable Fisheries.' This seminar was part of public awareness to promote local social, economic, and environmental benefits from fisheries refugia implementation.

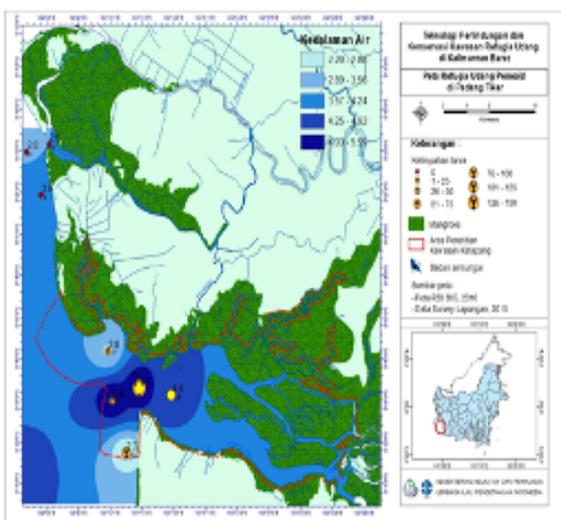

- The 1st National Scientific and Technical Committee (NSTC) Meeting in conjunction with the pre-survey meeting for fisheries refugia was conducted on August 18th, 2020, aiming to discuss fisheries profiles of both refugia sites and map the need for uncovered essential information. The technical plan for conducting a research survey in both Fisheries Refugia Candidates by considering COVID-19 pandemic also resulted. The meeting also synchronizes and accelerates progress among research teams in both locations by considering targeted output on the Fisheries Refugia Project.
- A coordination meeting was held on September 20th to establish a management team or site-based volunteer network in the Bangka Belitung refugia site.
- The Consultative meeting for establishing fisheries refugia of Penaeid shrimp in West Kalimantan were conducted through virtual meeting on 16th -17th February 202. The meeting was aimed to gather information and input from local governments, academics from university and other relevant institutions in West Kalimantan regarding the condition of shrimp fisheries, threats of shrimp stocks and their critical habitats, conservation areas that have been established in West Kalimantan and zoning plans for coastal areas in West Kalimantan.
- The NSTC2 was organized in March 2021 with aims to discuss the result of the survey trip in Bangka Belitung and to synchronize and accelerate progress among research teams in both locations under the coordination of NSTFP

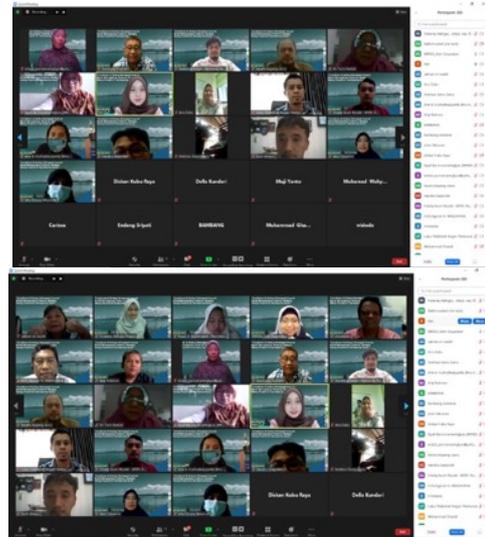

Indonesia National Scientific and Technical Committee Meeting (18 Aug. 20)

Meeting DIRECTORATE GENERAL of Marine Spatial Management (29 May 20)

Critical habitat of shrimp juvenile phase in Padang Tikar Bay

Participants to the Consultative meeting for establishing fisheries refugia of Penaeid shrimp in West Kalimantan

3) MALAYSIA,

Two priority fisheries *refugia* sites were selected: 1) Spiny lobsters *refugia* site locates at Tanjung Leman, Johor State, and 2) Tiger prawn *refugia* site locates in MIRI, Sarawak State. DOF/Malaysia conducted several research surveys in the coastal and offshore areas to identify the exacted location of spiny lobster and the tiger prawn *refugia* boundary during the past years. In 2020, DOF/MY finalized the survey results for a further consultation process with the fisheries community during the last Quarter of 2020. Unfortunately, the COVID-19 pandemic seriously affected the work plan; DOF/MY could conduct only two national committee meetings in the Third Quarter, such as National Scientific and Technical Committee and National Fisheries Refugia Committee. Nevertheless, DOF/MY published two scientific papers on *P. monodon* as a scientific-based fisheries management proposal. The scientific findings are based on studying the distribution, density, and biomass of tiger prawns in Pasu, Bakam, and Lutong Rivers in Miri, Sarawak, indicated essential nursery grounds. It is essential to preserve these nursery grounds to ensure the life cycle of *P. monodon* withstands.

During a period of Q1 and Q2 of 2021, Malaysia conducted two activities:

1) the Online Meeting on Way Forward Fisheries Refugia Project in Malaysia with aims to update the project progress and consult on way forward project implementation to achieve the target goals; and

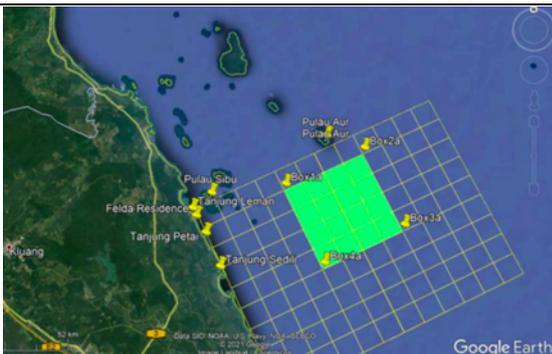

2) the seminar on the establishment of fisheries refugia for lobster in Tanjung Leman, Johor and tiger prawn in Kuala Baram, Sarawak. This seminar aims to a) discuss on the findings and recommendations of refugia's site selection, b) Information sharing platform between the expertise from Centre of excellence and the Department of Fisheries specifically on the site's characteristic and supporting technical data, c) Integrating research data to determine the boundaries of the refugia establishment area, d) determination of phase of the species life stage that needs to be managed and protected, e) evaluate and identify appropriate management measures based on the findings of the studies, and f) formulate further actions towards the management of refugia areas identified.

View of Sg. Lutong river, one of the nursery grounds for *P. monodon*.

Seminar on the establishment of fisheries refugia
30 March – 2 April 2021

The green box is the proposed lobster refugia site near Pulau Aur while the white box is the additional refugia site extension for the protection of juvenile spiny lobsters

Proposed site purple line for the fisheries refugia of tiger prawn (*Penaeus monodon*) in Kuala Baram, Sarawak

4) PHILIPPINES

Three priority fisheries *refugia* sites were selected: 1) **Rabbitfish** *refugia* site locates off Bolinao coastal area in Pangasinan Province; 2) **Frigate tuna** *refugia* site locates off the Masinloc coastal area in Zambales Province; and 3) **Mangrove jack** *refugia* site locates off Coron Islands, Palawan Province.

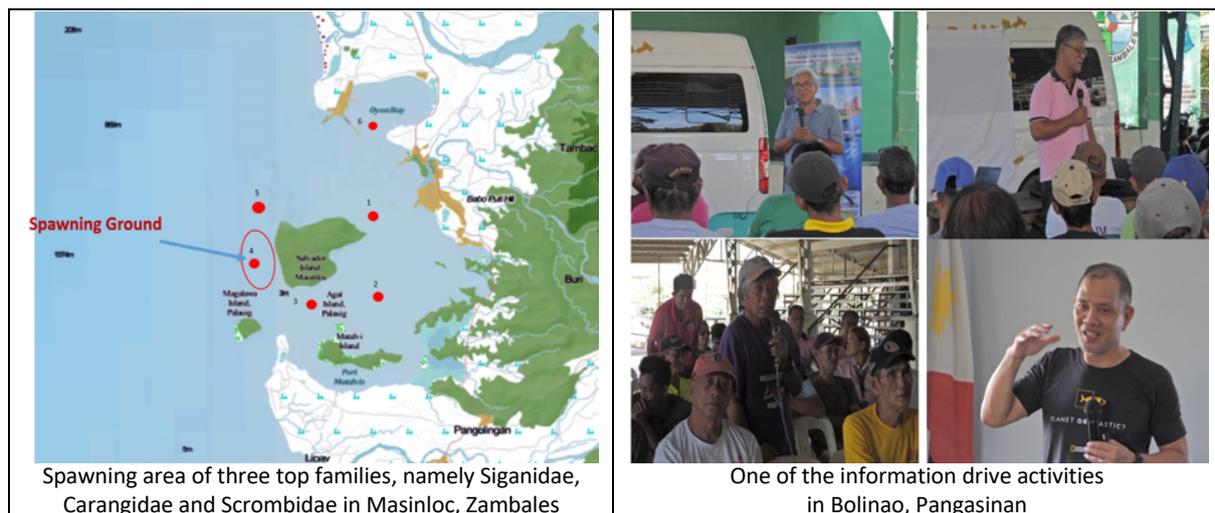

In 2020, references to the information drive from baseline surveys conducted by NFRDi in three *refugia* sites, the results were presented at the stakeholder consultations where about 413 persons attended (98 in Coron, 173 in Masinloc, and 142 persons in Bolinao). The information drive was successful. The participants supported and cooperated in suggesting activities to give them more knowledge in conserving and protecting the *refugia* site. One of the participants even voiced out that there concerns about the existing MPAs in the municipality. Most of the participants appreciated the discussion on the commonly essential species in their area.

Moreover, the additional knowledge stakeholders gained in learning the results of the fish eggs, and larvae sampling allowed them to comprehend the importance of protecting the spawning and nursery *refugia* of their priority species. Lastly, the good thing the project acknowledged is the honesty of the fisherfolk and other participants coming from the different sectors of the community to learn and understand more about fisheries *refugia*. As part of the project's critical activities, the project can allow the fisherfolk to allocate at least some time for information dissemination in all project activities in the project sites to empower and share the significance of fisheries management in the economic opportunity and habitat protection of the municipality.

NFRDi also conducted other activities in 2020 as follows:

- Refugia Site Management Committee meeting in Bolinao, Pangasinan Province
- Semi-progress meeting to update the project implementation
- Biological data samplings, ichthyoplankton survey and data validation
- At sea mapping for boundary delineation of the proposed *refugia* in Coron, Palawan Province
- Joining the partner events such as BFAR-USAID Fish Right Strategic Planning Program.

The activities in Q1 and Q2 of 2021 will be updated after receiving the progress from NFRDi.

5) THAILAND

There are two priority fisheries *refugia* sites as follows: 1) Indo-pacific mackerel *refugia* site locates in Trat Province, and 2) Blue swimming crab *refugia* site locates off Ban Don, Surat Thani Province. Reference to the past technical works, research surveys, as well as the socio-economic survey, the achievements presented in 2020 are as follows:

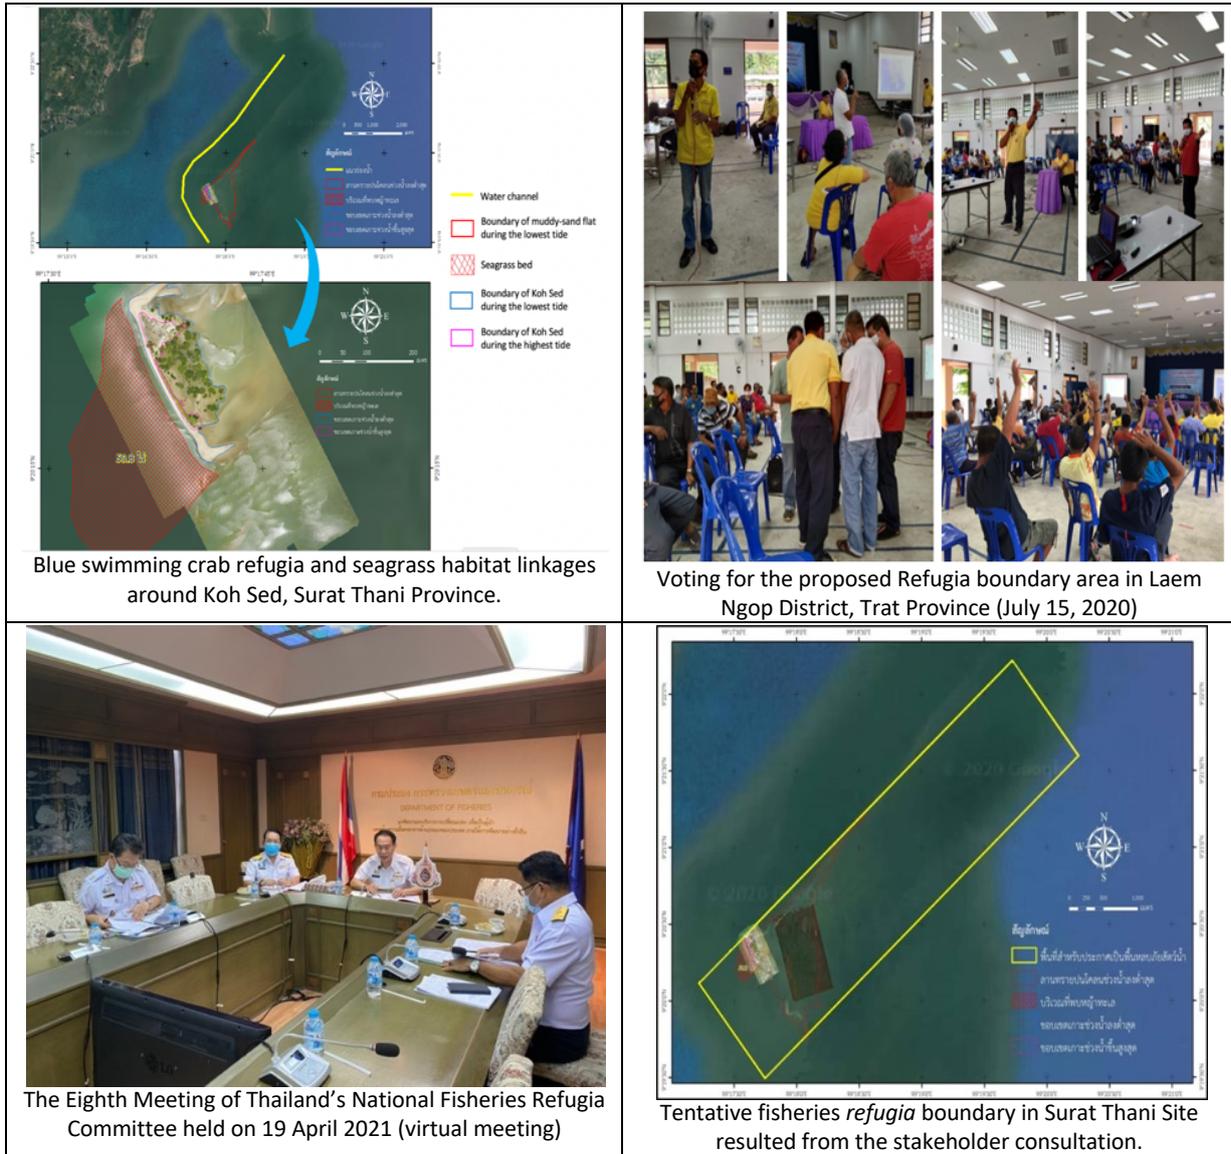

- DOF/TH come up with critical scientific papers for further consultation with the stakeholders. The fisheries profiles for short mackerel in Trat province and the profiles for blue swimming crab in Surat Thani Province, and the reports of area context and socio-economic in both *refugia* sites are

published. These are the main achievements in 2020 for further consultations with relevant stakeholders.

- Moreover, DOF/TH reforms the law, regulation, and fisheries management by including the progress in legislation on Fisheries Refugia in Trat and Surat Thani Provinces. In the Refugia establishment, the provincial-approved fisheries refugia site and management measures will be proposed to the Fisheries Resource Conservation Measure Determination Committee of the DOF/TH for approval before further consideration and adoption by the Ministry of Agriculture and Cooperatives. The notification on the fisheries refugia management measures can be issued later.
- DOF/TH conducted the Site-based Management Board in Surat Thani Refugia site to update and discuss further on Technical Information of Coastal Resources and Ecosystems including Boundary Delineation and Management Planning of Fisheries Refugia for Blue Swimming Crab in Koh Sed in Koh Sed, Ban Don Bay, Surat Thani Province.
- The Stakeholder Consultation Workshop for short mackerel refugia was conducted to discuss a critical period for short mackerel, prohibited fishing gears, and proposed refugia boundary area. The workshops were conducted at community levels in 5 Districts, namely Muang District, Koh Chang District, Laem Ngop District, Khlong Yai District, Koh Kut District. About 400 stakeholders, including fishers, local officers, and observers, attended the workshop. The final decision on fisheries refugia boundary and management plan is based on the vote of fishers and relevant stakeholders.
- The fourth National Scientific and Technical Committee and the seventh National Fisheries Refugia Committee were held in November 2020 at the DOF headquarter in Bangkok. One of the meeting results is the proposed fisheries refugia boundary for Blue swimming crab around Koh Sed (2 x3 km²), Ban Don Bay, Surat Thani Province.

In 2021, there are two activities as follows:

- Local Consultation Workshops on Fisheries Refugia Boundary and Management Planning in Surat Thani Site. The main activity aimed to enhance local stakeholder involvement in fisheries refugia boundary delineation and management planning in Surat Thani Site. A total number of 497 participants in 7 districts attended the workshops.
- The Eighth Meeting of Thailand's National Fisheries Refugia Committee was held as a virtual meeting on 19 April 2021. The solutions of the meeting are 1) Geographic location of fisheries refugia site at Koh Sed was to be prepared by Chumphon Fisheries Research and Development Center prior to submitting to Thailand's National Scientific and Technical Committee for approval, and 2) Notification for prescribing fisheries refugia site and its management measures to be drafted by Surat Thani Provincial Fisheries Office prior to certifying by the Law Division of the Department of Fisheries. The certified notification was subsequently to be proposed for approval at Surat Thani Provincial Fisheries Committee meeting.

Blue swimming crab refugia and seagrass habitat linkages around Koh Sed, Surat Thani Province.

Voting for the proposed Refugia boundary area in Laem Ngop District, Trat Province (July 15, 2020)

The Eighth Meeting of Thailand's National Fisheries Refugia Committee held on 19 April 2021 (virtual meeting)

Tentative fisheries *refugia* boundary in Surat Thani Site resulted from the stakeholder consultation.

6) VIET NAM

D-Fish planned to conduct four activities in 2020

1. Review existing information and data on fisheries and coastal habitats at sites, including needs;
2. Conduct consultations (including at-sea) to draft maps of fisheries refugia for priority species;
3. Review of policy and legal aspects on refugia (terminology, procedures, recommended reforms); and
4. National expert consultation to formulate agreed recommendations for policy and legal reforms.

Due to un circumstance condition, the activities are postponed to Q3/2021.

7) REGIONAL PROGRAM BY SEAFDEC/PCU

In 2020, the PCU continuously monitored and updates all planned outputs from country partners to the Refugia Websites. The PCU also conducted three regional meetings as follows:

- The meeting aimed to update the progress work and draft fisheries refugia profiles from six country partners and the regional program, particularly the Regional Action Plan status for short mackerel and the Regional guidelines on Indicators for management of fisheries refugia. The proposed Concept Note for SSFA on Improving Healthy Ocean Ecosystem through best practices and fishing gear

Innovations (or FishTrawl Project) was also discussed and finalized for further submission to the UNEP through SEAFDEC for further development of the full concept proposal.

- The Third Project Steering Committee Ad-hoc Meeting (PSC3-Adhoc) was held online on June 16th, 2020, to discuss the proposed cost Workplan and budget revision for project extension in 2021 and 2022. The Committee agreed and adopted two issues: 1) a two-year project extension with no extra cost from 2021-2022, and 2) a 10% reduction of the national unspent as of December 31st, 2019, to run the PCU an extended period.
- The Fourth Project Steering Committee Ad-hoc Meeting was also held online on October 6th, 2020, to finalize the proposed Workplan for Q3-Q4 2020 to 2022 and budget revision as of June 30th, 2020, to support a two-year extension (2021-2022). The Committee also discussed the arrangement for extending the Project Coordination Agreement (PCA) between SEAFDEC and UNEP and the Amendment of the Letter of Agreement between SEAFDEC and country partners.
- The Regional Training Workshop on Larval Fish Identification and Fish Early Life History Science planned in September 2020 was postponed due to the COVID-19 impact. The PCU, in collaboration with SEAFDEC/TD, is expected to organize in 2021.
- The PCU published eight Regional Program Reports: please learn more and download from our website: <https://fisheries-refugia.org>

III. ACTIVITY-BASED PROGRESS IN PERCENTAGE AS OF 30 JUN 2021

| Outputs | CAMBODIA | INDONESIA | MALAYSIA | PHILIPPINE | THAILAND | VIET NAM | PCU | Average |
|--|------------|------------|------------|------------|------------|------------|------------|------------------------|

The 4th Meeting of the Regional Scientific and Technical Committee
 For Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand,
 22 July 2021, 08:30-12:00 (GMT+7), Virtual Meeting

➤ A total of 2 Fisheries Refugia were adopted by the Royal Government of Cambodia:

- 1) Short Mackerel FR in Koh Kong
- 2) Blue Swimming Crab FR in Kep

RSTC4
3

➤ Five Fisheries Refugia are in processing for adoption:

- 1) In Trat, Thailand for Short Mackerel
- 2) In Surat Thani, Thailand for Blue Swimming Crab
- 3) In Tanjung Leman, Malaysia for Spiny Lobster
- 4) In Miri, Malaysia for Tiger Prawn
- 5) In Kampot, Cambodia for Juvenile Grouper

RSTC4

4

➤ **Revision of fisheries law, regulation, fisheries management plan, Strategic plan:**

- 1) Cambodia adopted the 5-year Action Plan for Marine Fisheries Management Area, including management measures in KEP Province
- 2) Cambodia also adopted the Strategic Plan for Fisheries Conservation and Management 2020 – 2029, (includes FMA: Fisheries Management Area/FR)
- 3) Cambodia revised Fisheries Law by including FR
- 4) Thailand reformed the law, regulation, and management of Fisheries Refugia
- 5) Malaysia evaluate and identify management measures based on scientific findings.

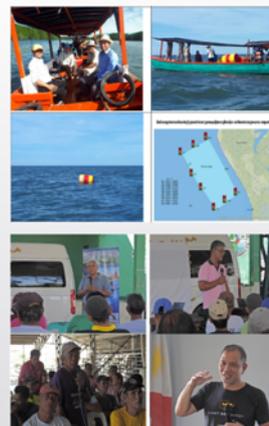

Preparation for Action Plan for short mackerel refugia management in Koh Kong Provinces (Oct.20)

RSTC4

5

➤ **Stakeholder Consultations:**

- 1) Cambodia conducted 4 consultations and 3 field surveys to finalize the Marine Fisheries Management Area map of the Juvenile Grouper Refugia in Kampot province.
- 2) Philippines conduct Stakeholder consultations in three priority Refugia sites, a total of 413 persons attended.
- 3) Consultation Meeting for establishing fisheries refugia of Penaeid shrimp in West Kalimantan, Indonesia

RSTC4

6

The 4th Meeting of the Regional Scientific and Technical Committee
 For Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand,
 22 July 2021, 08:30-12:00 (GMT+7), Virtual Meeting

Stakeholder Consultations (Continued):

- 4) Thailand conducted 2 Stakeholder Consultation to finalize the fisheries refugia boundary areas:
 1. At Trat for short mackerel: five meetings in 5 districts. A total of 400 stakeholders engaged in the discussion
 2. At Surat-thani for blue swimming crab: covering 7 Districts where 497 stakeholders engaged in the discussion

Voting for the proposed Refugia boundary area in Trat, Thailand (July 15, 2020)

RSTC4 7

The 4th Meeting of the Regional Scientific and Technical Committee
 For Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand,
 22 July 2021, 08:30-12:00 (GMT+7), Virtual Meeting

Fisheries Refugia Profiles:

- 1) Profile for Short Mackerel in Trat, Thailand
- 2) Profile for Short Mackerel in Koh Kong, Cambodia
- 3) Profile for BSC in Surat Thani, Thailand
- 4) Profile for BSC in Kep, Cambodia
- 5) Profile for Grouper in Kampot, Cambodia
- 6) Profiles for Philippines: including three priority sites

RSTC4 8

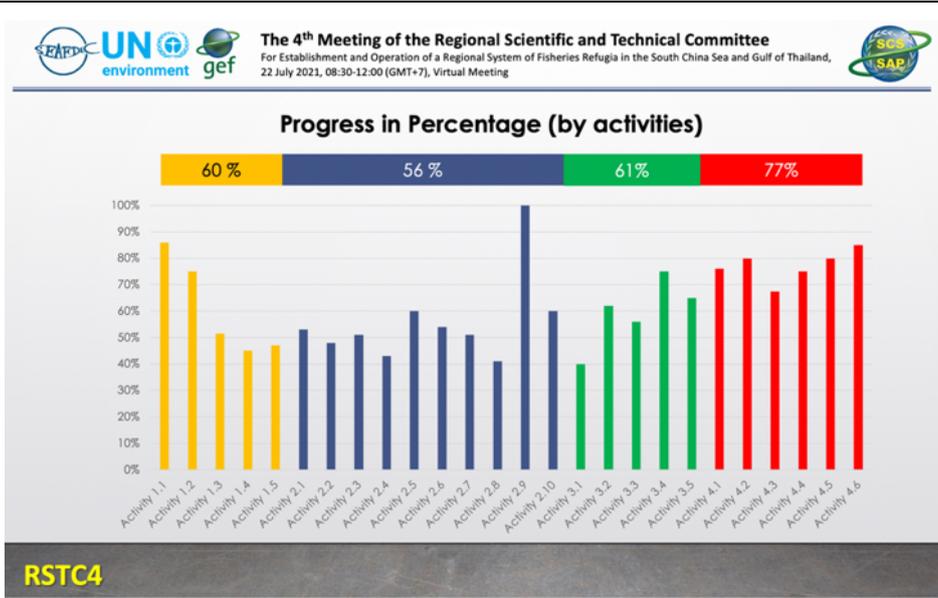

The 4th Meeting of the Regional Scientific and Technical Committee
 For Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand,
 22 July 2021, 08:30-12:00 (GMT+7), Virtual Meeting

Regional Programs:

- 1) The Third Regional Scientific and Technical Committee Meeting (RSTC3) was held on February 5th-7th, 2020, in Hai Phong, Viet Nam.
- 2) The Third Project Steering Committee Ad-hoc Meeting (PSC3-Adhoc) was held online on June 16th, 2020,
- 3) The Fourth Project Steering Committee Ad-hoc Meeting was also held online on October 6th, 2020
- 4) Information and Knowledge dissemination
- 5) Refugia Website updated.

RSTC4 9

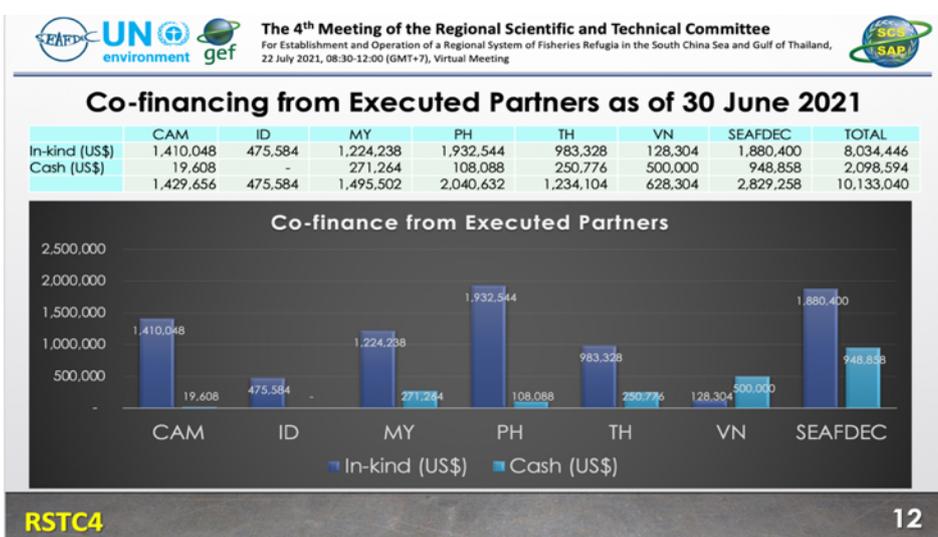

The 4th Meeting of the Regional Scientific and Technical Committee
 For Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand,
 22 July 2021, 08:30-12:00 (GMT+7), Virtual Meeting

| | <p>refugia site. At that time, two committees have been formulated, Provincial Management Committee is chaired by Kep Governor and Technical Working Group for the Management of Marine Fisheries Management Area is chaired by Deputy Governor of Kep province.</p> <ul style="list-style-type: none"> – Mackerel Fisheries Refugia at Peam Krasob, Koh Kong province is officially promulgated by the Minister of MAFF on 16 September 2019, which covers the total area of 1283ha. At that time, Technical Working Group for Marine Fisheries Management has been established in February 2020 and Deputy Governor of Koh Kong province is the Chairperson of the TWG. – Marine fisheries management area including grouper Fisheries Refugia at Prek Thnaot , Kampot province has not been adopted officially yet due to overlapping some parts of the fisheries refugia sites with economic development projects. New boundary of marine fisheries management area including grouper refugia site has been revised and sent to Kampot Administration to take further action. | <p>Marine fisheries management area including grouper refugia site will be adopted in December 2021</p> |
|--|---|---|

| Indicators | <i>Sharing country experience on changing of fisherfolk attitude</i> | Remarks |
|--|---|----------------|
| <p><i>Status of enabling environment reform including extent of behavioural change among small-scale fisherfolk at refugia sites</i></p> | <p>After the Royal Government of Cambodia making the policy reform of decentralization, Ministry of Agriculture, Forestry, and Fisheries made decentralization to sub-national to manage natural resources by themselves at the end of 217. Coincidentally two proclamations on the establishment of marine fisheries management area including fisheries refugia in Kep and Koh Kong provinces are issued by Minister of Agriculture, Forestry, and Fisheries in 2018 and 2019.</p> <p>In this connection, small scale fisherfolk at fisheries refugia sites, especially community fisheries has been observed that they have changed their behaviors in term of participation in management of marine fisheries resource in order to ensure fish stock and sustainable fisheries resource utility.</p> <p>In particular, community fisheries took part in disseminating closed fishing during spawning season (i.e. mackerel and blue swimming crab), enforcing law of fisheries and regulation, and patrolling to monitor illegal fishing action happening at refugia sites.</p> | |

ANNEX 5A NATIONAL REPORT OF INDONESIA
PART 1: Progress and status of project implementation

| Indicators | Name/Location/Province | Target Species | Status | | Estimated Refugia Size (Hectares) | Marine Habitat linkage | | Refugia Profile (done/not yet) |
|--|---------------------------|------------------------------|---------|----------------------------|-----------------------------------|----------------------------------|---------------------|--------------------------------|
| | | | Adopted | In process (expected date) | | Type (coral, seagrass, mangrove) | Estimated Size (ha) | |
| Fisheries Refugia Adoption | Site 1: West Kalimantan | Shrimp (Fenneropenaeus spp) | | √ | in process | Mangrove | in process | in process |
| | Site 2: Bangka Belitung | Squid (Uroteuthis chinensis) | | √ | in process | Coral, seagrass | in process | in process |
| | Site 3: (if appropriated) | | | | | | | |
| <p><i>If not yet achievement, give a reason and strategic workplan including expected date for completion. :</i></p> <p>The collection of data and information on fisheries and coastal habitats for proposed fisheries refugia sites, both West Kalimantan and Bangka Belitung, has been carrying out since the project started but still needs to be enriched to provide a fisheries refugia profile. Some of important data and information that should be provided are the spawning habitat for the target species, so that the coverage of fisheries refugia area can be determined.</p> <p>The observations and surveys on site to enrich data and information on refugia profiles cannot be carried out due to the covid19 outbreak since March 2020 where there are restrictions on visits and mobility to the location. Several efforts have been made to overcome these obstacles are desk studies and collaborating with universities and related institutions in both site to complete data and information that are not available yet for establishing fisheries refugia. However, without on-site observations and surveys, the profile of the refugia area will be difficult to be completed. The survey to enriched the critical data and information on sites is planning to be carried out in Q3 2021 by implementing strict controls of health protocols during the survey.</p> | | | | | | | | |
| <p><i>Willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia:</i></p> | | | | | | | | |

| | |
|--|--|
| | Based on observations and previous assessments that have been carried out, it showed that the fisheries sector, including fishing communities and other stakeholders supports the establishment of fisheries refugia in Bangka Belitung and West Kalimantan. |
|--|--|

| Indicators | Site | List of the key community/stakeholder | Issues/problems in the establishment | How to achieve? |
|---|-------------------|---|---|---|
| <i>community / stakeholder engagement in establishing of Fisheries Refugia and implementation of agreed management measures</i> | • West Kalimantan | <ul style="list-style-type: none"> • Local fishing community in West Kalimantan • Fishery product collector, trader and exporter • Fishery Agency of West Kalimantan Province • Fishery Agency of Kubu Raya District • Fishery Agency of Kayong District • DG of Marine Spatial Planning • Local University in West Kalimantan | <ul style="list-style-type: none"> • The lack of technical information on critical habitat especially for mature species (Fenneropenaues shrimp), including abundance of the species in the mature stage. • There is still the operation of destructive gears around critical juvenile stage habitats of priority species | <p>The survey will be conducted to obtain detail data and information</p> <p>Developing collaborations with the local university and others institutions to collect data and information about the critical habitat and discuss with them.</p> |
| | • Bangka Belitung | <ul style="list-style-type: none"> • Local fishing community in Mapur village (Bangka Belitung) • Fishery product collector, trader and exporter • Fishery Agency of Bangka Belitung Province • Fishery Agency of Bangka District • Fishery Agency of Bangka Selatan District • DG of Marine Spatial Planning • University of Bangka Belitung • | <ul style="list-style-type: none"> • The lack of information on critical habitat of squid during the spawning period • The existence of tin mining in the waters of Bangka Belitung | <ul style="list-style-type: none"> • The survey to obtain information on critical habitat for mature stage of squid will be conducted in Q3 -2021 • An intensive study to figure out the impact of the mining on the ecosystem in the waters of Bangka Belitung, especially on the critical habitat of squids |

ANNEX 6A NATIONAL REPORT OF MALAYSIA
PART 1: Progress and status of project implementation

| Indicators | Name/Location/Province | Target Species | Status | | Estimated Refugia Size (Hectares) | Marine Habitat linkage | | Refugia Profile (done/not yet) |
|---|--|---|---------|----------------------------|-----------------------------------|----------------------------------|---|--------------------------------|
| | | | Adopted | In process (expected date) | | Type (coral, seagrass, mangrove) | Estimated Size (ha) | |
| Fisheries Refugia Adoption | Site 1: Tanjung Leman, East Johor, Malaysia | Spiny Lobster (<i>Panulirus polyphagus</i>) | | 2022 | 140,023 ha | Coral, seagrass | Johor Marine Park: 76,565 ha Seagrass : 706 ha | Done |
| | Site 2: Kuala Baram, Miri, Sarawak, Malaysia | Tiger Prawn (<i>Penaeus monodon</i>) | | 2022 | 85200 | Coral, mangrove | Miri-Sibuti Coral reefs National Park- 186,930 ha | Done |
| | Site 3: (if appropriated) | | | | | | | |
| <p><i>If not yet achievement, give a reason and strategic workplan including expected date for completion.:</i> For both sites, the estimated refugia size was agreeable among members. The process of adoption will be finalized once the Refugia Management Plan is completed, assisted by the University of Malaya as a consultant. The expected date of completion will be the end of 2022. This is due to limited mobilization of staff to conduct stakeholder consultation due to pandemic, Covid-19 (Movement Control Order-MCO).</p> <p><i>Willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia:</i></p> | | | | | | | | |

| |
|---|
| <p>According to socio-economy survey done in 2020 (Norhanida <i>et al.</i>, 2020), willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia were divided into, (1) awareness, (2) the benefits of refugia and (iii) social and environmental protection. As a conclusion, around 90 % fishers agree on the tiger prawn and spiny lobster refugia establishment. Therefore, the fishers suggested the Department of Fisheries Malaysia do consultation beforehand to ensure consent of all stakeholders involved in this fishery.</p> <p>In 2017, one consultation program was held with stakeholders and local fishermen for Tiger Prawn Refugia while for spiny lobster the consultation program with local fishermen has been conducted in 2018.</p> <p>In 2018, two meetings with stakeholders and other local agencies, such as the Sarawak State Planning Unit, Miri Port Authority, and the Forestry Department, were held to provide information and explanations on the importance of tiger prawn resources and the fisheries department's proposal to make Kuala Baram a tiger prawn fishery refugia.</p> |
|---|

| Indicators | Site | List of the key community/stakeholder | Issues/problems in the establishment | How to achieve? |
|--|-------------|---|---|--|
| community / stakeholder engagement in establishing of Fisheries Refugia and implementation of agreed management measures | Refugia 1 | <ul style="list-style-type: none"> East Johor traditional fishers (near shore) Trawl net operators and fishers (commercial) Island inhabitants/tourism operators | <ul style="list-style-type: none"> Unclear/lack of information about the implementation of refugia and its rules <p>Compliance with “no-take” rule during specific refugia close season period</p> | Stakeholder consultations and public awareness |
| | Refugia 2 | <ul style="list-style-type: none"> Fishermen Miri Port Authority | <ul style="list-style-type: none"> Level of awareness/understanding the benefit of tiger prawn refugia usage conflict- overlap of refugia areas, more development to expand Kuala Baram to a larger shipping port | <ul style="list-style-type: none"> Explanation and consultation by Department of Fisheries Meeting and discussion with Miri Port (win-win situation) |

| Indicators | Progress and status | Remarks |
|---|---|----------------|
| <i>Reform of national policy, legal and regulatory frameworks governing the management of fisheries refugia</i> | Regulations on the proposed areas will be drafted after obtaining approvals from State Government. Regulations will focus on: <ul style="list-style-type: none"> • regulating allowable and prohibited fishing gears • regulating temporal closure during critical life stages in the areas • regulating development or other activities within the areas • penalties for encroachment and illegal activities or illegal harvesting | |

| Indicators | Sharing country experience on changing of fisherfolk attitude | Remarks |
|---|---|----------------|
| <i>Status of enabling environment reform including extent of behavioural change among small-scale fisherfolk at refugia sites</i> | <ol style="list-style-type: none"> 1. Fishermen's participation in the management of refugia's is vital and urgent. The high degree of trust and understanding between the Department of Fisheries and members of the fishing community may be strengthened and extended throughout the Department so that fishers can rest certain that the Department is truly committed to safeguarding the sustainability of fished resources. 2. For the sustainable use of fisheries resources, active participation of fishermen's communities is essential. It will pave the way for co-management, in which both resource users (fishers) and government agencies (Department of Fisheries) collaborate to address management concerns and share decision-making duties before taking action. 3. The Department of Fisheries has also designed and implemented several educational programs for fishers and the public on the importance of working together to safeguard fisheries resources and livelihood. | |

PART 1: Progress and status of project implementation

Willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia:

- A spiny lobster the consultation program with local fishermen has been conducted in 2018.
- According to socio-economy survey done in 2020 (Norhanida *et al.*, 2020), willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia were divided into, (1) awareness, (2) the benefits of refugia and (3) social and environmental protection.
- As a conclusion, around 90 % fishers agree on the spiny lobster refugia establishment. Therefore, the fishers suggested the Department of Fisheries Malaysia do consultation beforehand to ensure consent of all stakeholders involved in this fishery.

| Status of enabling environment reform including extent of behavioural change among small-scale fisherfolk at refugia sites | <ol style="list-style-type: none"> 1. Fishermen's participation in the management of refugia's is vital and urgent. The high degree of trust and understanding between the Department of Fisheries and members of the fishing community may be strengthened and extended throughout the Department so that fishers can rest certain that the Department is truly committed to safeguarding the sustainability of fished resources. 2. For the sustainable use of fisheries resources, active participation of fishermen and fishermen's communities is essential. It will pave the way for co-management, in which both resource users (fishers) and government agencies (Department of Fisheries) collaborate to address management concerns and share decision-making duties before taking action. 3. The Department of Fisheries has also designed and implemented several educational programs for fishers and the public on the importance of working together to safeguard fisheries resources and livelihood. | |

PART 2: Statistical Data

Number of fishing boat (licenses) at Spiny Lobster Refugia, East Johor
Year 2005 - 2019

Lobster Larvae Sampling, November 2020

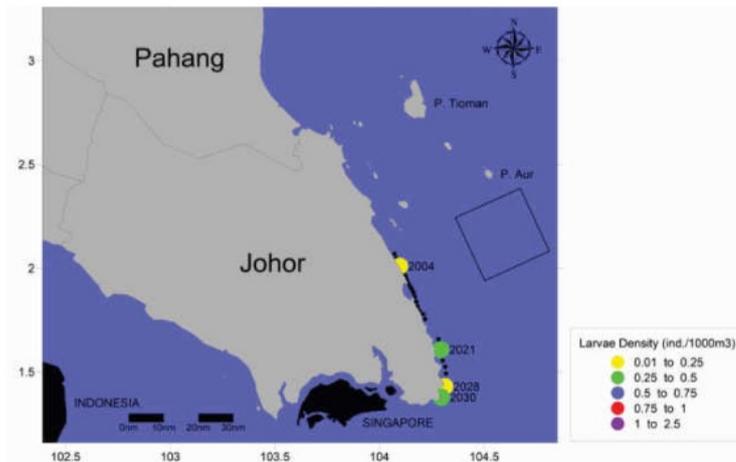

Figure 3: The density of spiny lobster phyllosoma (individuals/1000m³) ranged from 0.2 to 0.4 individual/1000m³. The proposed refugia area is marked with a square line and is located south of Pulau Aur

The results showed, that the lobster phyllosoma were found in four study locations with the average 0.27 ± 0.05 individual/1000m³.

The distribution of lobster phyllosoma were more concentrated around the southeast Johor area near Sungai Rengit

PART 1: Progress and status of project implementation

Willingness of fisheries and environment sectors to agree on Establishment of Fisheries Refugia:

- In 2017, one consultation program was held with stakeholders and local fishermen for Tiger Prawn Refugia.
- In 2018, two meetings with stakeholders and other local agencies, such as the Sarawak State Planning Unit, Miri Port Authority, and the Forestry Department, were held to provide information and explanations on the importance of tiger prawn resources and the fisheries department's proposal to make Kuala Baram a tiger prawn fishery refugia.
- As a conclusion, around 90 % fishers agree on the tiger prawn refugia establishment. Therefore, the fishers suggested the Department of Fisheries Malaysia do consultation beforehand to ensure consent of all stakeholders involved in this fishery.

|---|---|----------------|
| <i>Status of enabling environment reform including extent of behavioural change among</i> | For project implementation, Philippines followed the Fisheries <i>Refugia</i> Management Framework including the conduct and coordination of the National Fisheries Refugia, Scientific and Technical Committee Meetings, Site-board committee meetings, and workshops and consultation for the LGU and the stakeholders. A positive feedback from the LGU especially from the fishing community with the introduction of the fisheries refugia in the 3 sites. Through the information-drive and community consultations, the suggestions and questions from the | |

| | | |
|---|---|--|
| <p><i>small-scale fisherfolk at refugia sites</i></p> | <p>coastal communities were addressed and answered. The fisherfolk have strong disagreements with the establishment of MPAs in their municipalities, however, through the workshops they have understood the difference and the boon of establishing fisheries refugia for a more productive fishing stock. With proper guidance and continued technical support, the fisherfolk began to understand the importance of protecting the 2 major life stages of fishes which could greatly improve the fishing stock of the community in the future.</p> | |

| Indicators | Progress and status | Remarks |
|--|---|----------------|
| <p><i>Reform of national policy, legal and regulatory frameworks governing the management of fisheries refugia</i></p> | <p>National policy, legal and regulatory frameworks in Thailand have been dramatically reformed in 2015 by the repeal of Fisheries Act B.E. 2490 (1947) (latest amended in B.E. 2558 (2015)) and the enactment of the Royal Ordinance on Fisheries, B.E. 2558 (2015).</p> <p>In Royal Ordinance on Fisheries, B.E. 2558 (2015), there are 11 Chapters with 176 Sections which provide fundamental fisheries legal framework aiming to reorganize fisheries in Thailand with a view to preventing IUU fishing in order to preserve aquatic animal resources as a sustainable source of food for humanity and preserve the environment in an appropriate state along the line of approaches, criteria and standards recognized internationally, as well as to protect the welfare of seamen and prevent all forms of forced labor in the fisheries sector.</p> <p>In 2017, Royal Ordinance on Fisheries (No. 2), B.E. 2560 (2017) has been additionally enacted in order to fulfill more controls on transshipment vessels and supporting vessels, strengthening enforcement of administrative sanctions and other issues that need cooperation across government agencies.</p> <p>In the context of fisheries <i>refugia</i>, those reforms can serve as its regulatory fundamental by applying the relevant Sections in the Royal Ordinance on Fisheries to the management planning at fisheries <i>refugia</i> sites.</p> <p>According to the latest stakeholder consultations, it was agreed that Section 71(1) in Chapter 5 – Conservation and Management Measures – in the Royal Ordinance on Fisheries, B.E. 2558 (2015) shall be applied as the regulatory framework for fisheries <i>refugia</i> management. Contents of Section 71(1) are: The Minister or the provincial fisheries committee shall have the power to issue notifications regarding the following: (1) fishing gears according to their forms, fishing methods, fishing areas, the size of fishing vessels used in fishing operation and other conditions that are prohibited from fishing operations in fishing grounds.</p> | |

| Indicators | Sharing country experience on changing of fisherfolk attitude | Remarks |
|--|---|----------------|
| <p><i>Status of enabling environment reform including extent of behavioural change among small-scale fisherfolk at refugia sites</i></p> | <p>For project implementation, Thailand has followed the Fisheries <i>Refugia</i> Management Framework which includes the coordination of national and local management committees as well as stakeholder consultation. In the meetings of site-based management boards and workshops for stakeholder consultation, the fishers showed their positive attitude in the management of fisheries resources in their corresponding fishing grounds; they also relied on the technical information for any decision on management planning. Thanks to the national fisheries management policy that there has been an urge for registration of the Local Fishing Community Organizations, which enhance the mechanism for fishers to share their opinions, comments, and attitudes. For Thailand, the activities of stakeholder participation in the fisheries <i>refugia</i> implementation have played the significant role in enhancing good attitude of fishers on community-based management, resulted in the smooth adoption of <i>refugia</i> concept, site boundaries, and management measures. Fishers also showed their obvious willingness to participate in technical data collection and at-sea surveys of geographic location for fisheries <i>refugia</i> boundary, which contribute to their acceptance of the establishment of fisheries <i>refugia</i> in their corresponding areas.</p> | |

Fisheries Refugia Project

4th Regional Scientific and Technological Committee Meeting
22 July 2021

Project Activities

04 activities have been implementing:

- Elaborate the profiles of fisheries and habitats for 3 fisheries *refugia* sites at Bach Long Vy, Hon Cau and Phu Quoc
- Utilization of scientific and local knowledge to identify borders of fisheries *refugia*.
- Review and assess legal basis and policy for the establishment of fisheries *refugia*
- Elaborate national guideline on procedures for the establishment and management of fisheries *refugia*

Project Document Amendment

- Propose project document amendment to MARD
- Propose overall project implementation plan
- Reason for amendments:
 - Fisheries Law 2017: provisions on fisheries resource protection area (Fisheries *Refugia*).
 - Status of fish resources and habitats at sites
 - Mandates of competent authorities to manage the fisheries *refugia* site
 - Financial management regulations of ODA project Capture Fisheries
 - Total project budget (-10%) and project implementation extension until 2022

**ANNEX 10 CONTENTS OF THE REGIONAL GUIDELINES ON INDICATORS FOR SUSTAINABLE
MANAGEMENT OF FISHERIES *REFUGIA***

Executive Summary

The list of Indicators (Appendix 1) for sustainable management of Fisheries Refugia was developed at the 1st Regional Meeting held on 9-11 September 2019 at A-One the Royal Cruise Hotel, Pattaya City, Chonburi Province, Thailand. The development of the Regional Guidelines is aimed to support the participating countries on the effective management of fisheries refugia established during the project implementation and to ensure that after project-end, country shall continue and increase number of fisheries refugia in their country. SEAFDEC PCU plans to complete the Draft Regional Guidelines by end of 2021. In this connection, the PCU prepares the Contents of the Regional Guideline for consideration and comments.

ACTIONS BY THE RSTC4:

- ❖ Take notes, consideration and suggestion to the PCU on the Contents of the Regional Guidelines for development further.

CONTENTS OF THE GUIDELINE ON INDICATORS FOR SUSTAINABLE MANAGEMENT OF FISHERIES *REFUGIA*

- Preparation for this document
- Preface from SEAFDEC/PCU

- 1. Introduction
 - 1.1 Concept of Sustainable Development
 - 1.2 Fisheries Refugia Concept
 - 1.3 Purpose of the Indicators
- 2. Sustainable Management of Fisheries Refugia System
 - 2.1 Developing and Adopting the Framework
 - 2.2 Specifying criteria, objectives-related indicators
- 3. Indicators and Target Reference Points
 - 3.1 Ecosystem
 - 3.1.1. Fisheries Resources
 - 3.1.2. Habitat (mangrove, coral, seagrass, and other critical habitats)
 - 3.1.3. Environment (Impact from human act.)
 - 3.2 Social Aspects
 - 3.2.1 Livelihoods
 - 3.2.2 Stakeholder Participation
 - 3.2.3 Education (Local knowledge, Local wisdom)
 - 3.3 Economic Aspects
 - 3.3.1 Economic Condition
 - 3.3.2 Fisheries Production, Fishing Efforts
 - 3.3.3 Innovative Fisheries Technology
 - 3.4 Governance
 - 3.4.1 Fisheries management policy
 - 3.4.2 Stakeholder Cooperation/Coordination
 - 3.4.3 Enforcement
 - 3.4.4 Capacity Building
 - 3.4.5 Funding Support
 - 3.5 Climate Change and Disaster
 - 3.5.1 Impact to Fish Stock
 - 3.5.2 Impact to Habitat
 - 3.5.3 Impact to Environment
- 4. Glossary
- 5. Annex
 - 5.1 Fisheries Refugia Concept
 - 5.2 Baseline Survey Template
 - 5.3 TBD
- 6. References

Appendix 1:
RESULTS OF THE BRAINSTROMING SESSION ON
INDICATORS FOR LONG TERM MANAGEMENT OF FISHERIES *REFUGIA*

| Dimensions | Sub-dimensions | Criteria | Indicators |
|---|---|---|---|
| 1) Ecosystem | Fisheries Resources | Abundance stock / Distribution / Fishing Effort | Biomass Estimation (ton) |
| | | | Level of MSY (ton) |
| | | | Level of MEY (ton) |
| | | | Level of CPUE (Kg/...) |
| | | | CPUA (Kg/Area) |
| | | | Catch landing (ton or Kg) |
| | | Biological Parameter | Length at first capture (Lc) |
| | | | Length at first mature (Lm) |
| | | | Sex ratio |
| | | | Spawning Potential Ratio |
| | | | Length frequency |
| | | | Exploitation rate |
| | | | GSI (Gonadosomatic Index) |
| | | Species composition / Catch structure | Percentage of dominance species |
| | | | Number of species |
| | % Main economic/commercial species | | |
| | Percentage of Bycatch | | |
| | Habitat (mangrove, coral, seagrass, and other critical habitats) | Healthy/condition/ Area | Size Coverage (Percent) |
| | | | Healthy Index |
| | | | Target habitat density (IUCN reference) |
| Environment (Impact from human act.) | Pollution | Standard Water Quality (e.g. COD, BOD) | |
| | | Phytoplankton Abundance | |
| | Eutrophication | Phosphate, Nitrate Concentration (Nutrient loading) | |
| | | Coastal reclamation area | |
| | Anthropogenic (Human activity) | Level of maritime activity (If appropriated) | |

| Dimensions | Sub-dimensions | Criteria | Indicators |
|-------------|---|---|--|
| 2) Social | | Erosion | Level and distribution of sedimentation Loss of area/habitat |
| | | Livelihoods | Choice of Occupation |
| | Fish consumption | | Fish consumption per capita per year |
| | Stakeholder Participation (Indigenous People, Gender, etc.) | Nutrition | % animal protein (if appropriate) |
| | | Participation | Ratio of Number of participations (gender and IP) |
| | | Local Organization | Number of organizations, |
| | | | Number of Best practices applied |
| | | Networking | Number of networking |
| | | | Type /way of direct or indirect communication |
| | | | Number of agreements |
| | Education (Local knowledge, Local wisdom) | Awareness program (e.g. information center, information education campaign (IEC)) | Number of information center or similar. |
| | | | Number of consultations |
| | | | Number of best practices |
| | | | Number of awareness program |
| | | | Number of understanding by stakeholder |
| 3) Economic | Economic Condition (to community) | Capacity building | Number of training/Extension |
| | | Poverty incident | Poverty Index |
| | | Capital accessibility | Number of financial accessible |
| | Fisheries Production, Fishing Efforts | Income | Income per household |
| | | Contribution of target species / Availability | Value of contribution/production |
| | Innovative Fisheries Technology | Effectiveness fishing gear | level of CPUE |
| | | Cost effectiveness | Cost reduction, time, human power |
| | | Environment friendly (Green technology) | Reduce of fuel consumption |
| | | | Reduce bycatch |
| | | Investment | Number of investment (for e.g. fishing fleet, processing, ship builder, management tools/software, etc.) |

| Dimensions | Sub-dimensions | Criteria | Indicators | |
|----------------------|--|--|--|---|
| 4. Governance | | | New domestic product | |
| | Fisheries management policy (Fishing/User Right, Precautionary approaches/Science-based management, and Synergistic Way/Strategy) | Legal framework | Number of law and regulation | |
| | | Harvest strategy/ Limit of fishing effort | Fishing close, (area and seasonal closure, Zoning | |
| | | | Number of Input control (Number, mesh size, length of fishing gear, Licensing control, Capacity (e.g. Gross tonnage, horsepower, etc.) | |
| | | | Number of output control (TAC, Quota, Target species) | |
| | | Fisheries management plan/ strategy/ framework | Available/not available | |
| | | | Management plan of Fisheries refugia in place, | |
| | | | Habitat rehabilitation, protection and stock enhancement. | |
| | | Efficiency fishing gear | Length limit (e.g. crab fishery) | |
| | | Stakeholder Cooperation/Coordination (Regional / national levels) | Management mechanism | Management board/ committee, transboundary committee, RPOA for refugia in place |
| | | | | Linkage to the existing management/conservation framework (e.g. MPAs) |
| | Enforcement | Coordination mechanism | Inter-agency coordination in place, Number of joint operations | |
| | | | Level of enforcement | |
| | | Fishery Law enforcement | Frequency of regular patrol | |
| | | | Number of violation prosecution | |
| | Capacity Building | Best Practice | Adoption of best practice in place | |
| | | Maritime policy and regulation/ International policy | Number of training/workshops | |
| | Funding (Infrastructure, Enforcement, etc.) | Sustainability | Long term commitment of Government on finance | |
| | | Source of funding (incentive, soft loan, donation/CSR) | Number of donors | |
| | | | Type of funds | |

| Dimensions | Sub-dimensions | Criteria | Indicators | | |
|--|------------------------------|-------------------------|---|--|---------------|
| 5) Climate Change and Disaster | | incentive | Type of incentive | | |
| | | | Number of activities | | |
| | | | Number of best practices | | |
| | Fish Stock | Impact to Fish Stock | | Availability/levels of knowledge abundance, distribution, genetic diversity, recruitment | |
| | | | | Update information impact to fish stock | |
| | Impact to Habitat | Coral bleaching | | Area | |
| | | | | Incident/ frequency | |
| | | | | Recovery Rate | |
| | | Destruction of mangrove | | | Area coverage |
| | | | | | Recovery Rate |
| | | | | | |
| | Destruction of sea grass | | | Area coverage | |
| | | | | Recovery Rate | |
| | | | | | |
| | Impact to Environment | Sea level rise | | Saline intrusion | |
| Mean sea level annual | | | | | |
| Coastal Erosion (Area) | | | | | |
| Physical/chemical parameters (T, Salinity, PH, DO) | | | Level of physical and chemical parameters | | |
| Precipitation (rainfall) | | Level of Precipitation | | | |
| Ocean acidification | | PH level | | | |

**ANNEX 11 REGIONAL ACTION PLAN FOR MANAGEMENT OF TRANSBOUNDARY SPECIES,
INDO- PACIFIC MACKEREL (RASTRELLIGER BRACHYSOMA) IN THE GULF OF
THAILAND SUB-REGION**

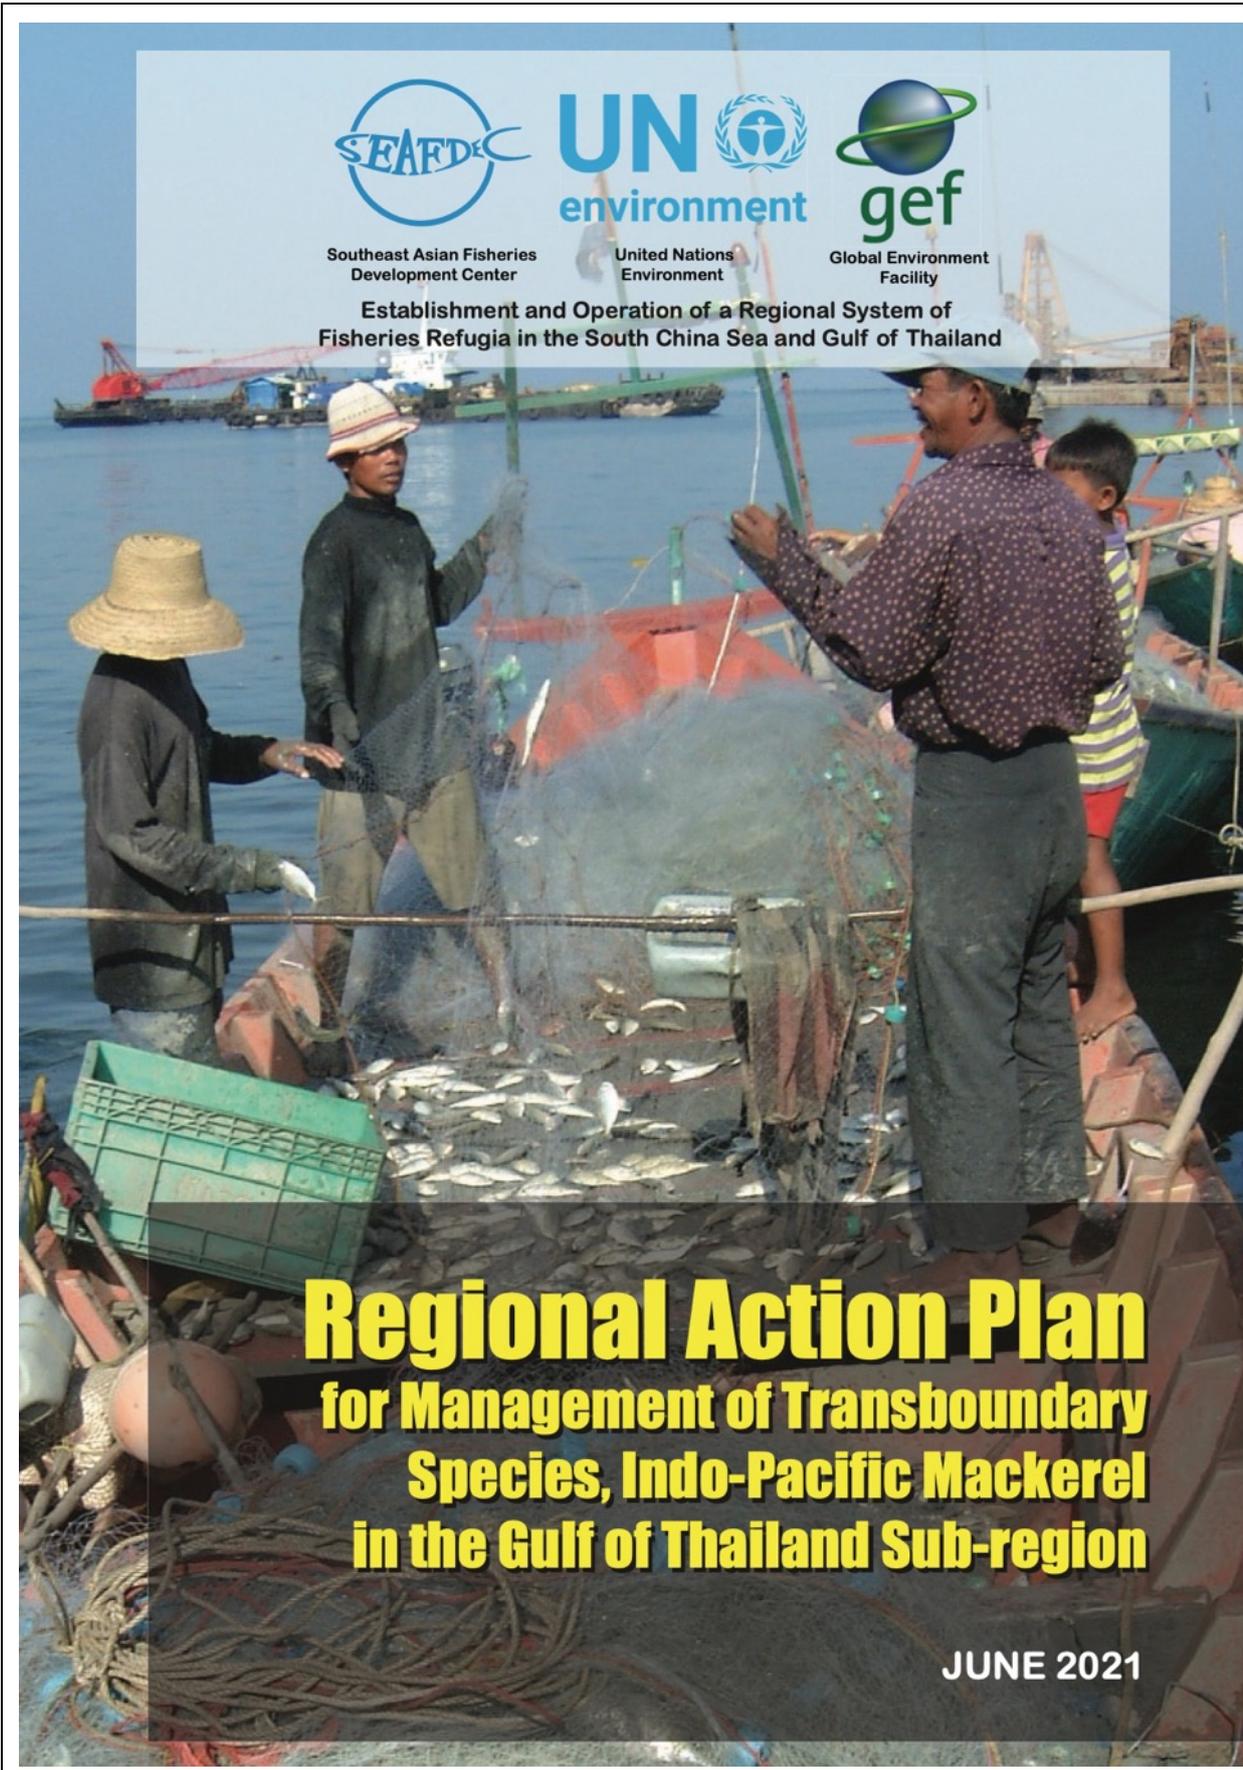

**REGIONAL ACTION PLAN FOR MANAGEMENT OF TRANSBOUNDARY SPECIES, INDO-
PACIFIC MACKEREL (RASTRELLIGER BRACHYSOMA)
IN THE GULF OF THAILAND SUB-REGION**

Executive Summary

Concerning the improved management policy of critical habitats for fish stocks of transboundary significance, The Regional Action Plan for Management transboundary species, Indo-pacific Mackerel in the Gulf of Thailand Sub-Region where the results are the extent to the South China Sea sub-region was drafted in September 2019, and adopted by the SEAFDEC Council in May 2020. The ACTION PLAN was later endorsed at the FCG/ASSP in November 2020 and further addressed to the ASWGFi in the 2nd Quarter of 2021 for further support under the ASEAN Policy Framework. The PCU presents the published Action Plan for further distribution.

ACTIONS BY THE RSTC4:

- ❖ Take notes, consideration and apply it for further development of the national action plan as appropriate.

CHAPTER-1: INTRODUCTION

Mackerels (Family Scombridae), particularly the Indo-Pacific mackerel (*Rastrelliger brachysoma*), also known as short mackerel, are among the most economically important small pelagic fishes in the Southeast Asian region, contributing to approximately 38% of the region's total small pelagic fisheries production or 11% of total capture fisheries production in 2010. Comparing mackerel species, in 2016, Indo-Pacific mackerel contributed to 78% of the total mackerel production with an average price of 1,492 USD/MT, decreasing from the production reported in 2015. (SEAFDEC, 2018).

On the production of Indo-Pacific mackerel by countries, Indonesia was the major catcher in the region, reporting the highest production at 283,106 MT in 2016, followed by the Philippines at 38,339 MT (SEAFDEC, 2018). As for Thailand, the mackerel production was not segregated by species, but the total production of all mackerel species was reported to be 81,017 MT in 2016. Nevertheless, the country's total mackerel production had drastically reduced from those of 194,845 MT in 2012. Like Thailand, the Philippines also reported declining trends in its Mackerel production through the period (SEAFDEC, 2018).

The Gulf of Thailand Sub-region (GoT) is one of the critical ecosystems for Indo-Pacific mackerel, where the peak of highest catch using purse seine and the falling net reported in 1996 at 328,955 MT; while the low catch appeared during three periods, in 1999, 2005 and 2010 at 289,285 MT, 283,984 MT, and 259,354.56 MT, respectively. Moreover, the catch has never reached 300,000 MT as recorded in 1996 (SEAFDEC, 2018).

In general, various types of fishing gears were used to harvest Indo-Pacific mackerel in the GoT; and the three significant types recorded in 2008 were purse seines (45%), driftnets (31%), trawls (18%). The landings show declining trends indicating that the Indo-Pacific mackerel stocks in the South China Sea and GoT were overexploited. For instance, in 2016, Thailand reported the catch production of Indo-Pacific mackerel by three main fishing gears, purse seine at 3,008 MT, trap at 691.6 MT, and trawl at 630.3 MT (SEAFDEC, 2018).

Short mackerel is considerable inexpensive but contains high protein, making the species popular for consumption in the Southeast Asia.

CHAPTER 2: STOCK STATUS OF INDO-PACIFIC MACKEREL

Indo-Pacific mackerel is considerably inexpensive but contains high protein, making the species popular for consumption in Southeast Asian countries such as Cambodia, Indonesia, Thailand, and Malaysia. However, with a drastic increase in the production of canned mackerels to replace the decreasing sardines, the catch of Indo-Pacific mackerel has recently been declining due to overfishing and unregulated fishing operations in several countries. Such a situation has become a significant concern by countries in the Southeast Asian region.

Several fish species, including mackerels, were reported to be in the overexploitation state in the Gulf of Thailand (Puthy, 2007). His study using the Schaefer and Fox models indicated that mackerel stocks are both biologically and economically overexploited. However, there were still opportunities to increase the mackerel stocks by reducing fishing efforts, allowing the stocks to recover.

Thailand also reported that the species was under an overexploitation state throughout the past years. The species also had to change population patterns, which could be due to the environmental impacts. Furthermore, the distribution of fish larvae could also be influenced by changes in phytoplankton, water current, and temperature (SEAFDEC, 2017).

In Indonesian waters, over-exploitation of marine fishery resources, including Indo-Pacific mackerel, has been highlighted in the Java Sea and other Indonesian waters. However, the recent population dynamic study by Zamroni, A.& Ernawati, T. (2019) showed that Indo-Pacific mackerels in Northern Coast Java of Indonesia water were still under fully exploitation state, and the recruitment process has not been disturbed. Although the species has yet to reach the heavy exploitation state, the suggestion was made that fishing efforts should be reduced, while fishing permits, such as the number of units, size of the fishing fleet, fishing gear dimensions, and fishing technology pressure, should also be controlled. Nevertheless, due to limited biological information of Indo-Pacific mackerel, genetic diversity study of the species, including in Java Island, was conducted (Indaryanto *et al.* 2015).

Meanwhile, the decline of Indo-Pacific mackerel due to changes in environmental condition and water quality, modification, and loss of critical habitats, has been documented in several countries and reported by the media.

Total weights and values of short mackerel landed in Trat fisheries refugia site (Munprasit *et.al.*2020)

CHAPTER 3: ISSUES, KNOWLEDGE GAPS, AND CHALLENGES

The Scientific and Technical Committee for fisheries refugia project identifies the issues, knowledge gaps, and challenges for sustainable utilization of Indo-Pacific mackerel based on the reviews and inputs from six targeting Southeast Asian countries, namely Cambodia, Indonesia, Malaysia, Philippines, Thailand, and Viet Nam. In response to SEAFDEC questionnaires in September 2019, the issues, knowledge gaps, and challenges are categorized and summarized as follows:

3.1) DATA AND INFORMATION

- Insufficient information on the Indo-Pacific mackerel fishery characteristics
- Insufficient series catch and effort data, series of size data, biological data collection for population and abundance study
- No current information of migratory route, spawning ground, and season for a whole life cycle
- No regular monitor data collection on capture production.

3.2) UNDERSTANDING THE STATUS OF FISH STOCK

- Lack of knowledge on stock structure (need on DNA study)
- Insufficient stock status of *R brachysoma* (distribution and abundance)
- Insufficient information on Population dynamics (Growth parameters, mortalities, and relationship to other regional stock)
- No Actual effort to exploit the resources
- Trans-boundary distributions
- Lack of knowledge on how to assess multi-fishing gears to harvest

3.3) MANAGEMENT RESPONSES

- No Fisheries Management Plan
- No information on existing and effectiveness of regulations
- No co-management schemes/arrangements
- No transboundary management mechanism/plan
- No information on Effects/Loss to IUU fishing
- No reliable database or software for Assessment
- No Traceability system using an electronic logbook
- support the Sustainable management concept, Co-management, and EAFM

3.4) AWARENESS BUILDING

- Educate people and student in fisheries communities
- Distribute brochures or any media to promote fisheries management
- Raise awareness of both small-scale fishers and commercial fishers
- Sharing of the findings to both policy management level and fishermen
- develop consultation among researchers, managers, and stakeholders (EAFM)
- to support the Sustainable management concept, Co-management, and EAFM

3.5) STRENGTHEN REGIONAL COOPERATION

- Standardization on data collection for regional stock assessment
- Data sharing

- Lack of management body
- Develop the transboundary management mechanism/plan

3.6) STUDY THE ENVIRONMENT IMPACT

- Temporary disappear of short mackerel in the Gulf of Thailand
- impact of climate change to fish migration route

3.7) ENHANCE CAPACITY BUILDING

- Strengthen knowledge on research works as follows:
 - Species identification of small size (juvenile) and larval fishes
 - otolith (to know the age of fish)
 - Data collection at landing sites: catch and biological data
 - Data analysis
 - Stock Assessment and modeling for stock assessment
 - Harvest Strategy
- Fishing gear technology
- Fisheries manager
 - Translating scientific advice into management measures and actions
 - Understand various fisheries management tools and used them in the actual implementation

3.8) INFORM THE AGREED MANAGEMENT MEASURES

- Relevant stakeholders including fishers, fishing industry, local community, etc.)
- Ensure its compliance.

Technical Training on Biological Studies of Indo-Pacific Mackerel on 12-14 February 2019
in Koh Kong Province, Cambodia

CHAPTER 4: REQUIRED REGIONAL COOPERATION FOR TRANSBOUNDARY MANAGEMENT

Since 1953, Thailand undertook several management actions for Indo-Pacific mackerel stock. From 1953 to 2015, 13 Notifications were released concerning the closure of fishing areas in the Gulf of Thailand to conserve the spawning grounds and nursery stages of aquatic resources (Saikliang 2016). Thailand also undertook several studies to enhance knowledge on migration patterns of Indo-Pacific mackerel within the country's EEZ in the Gulf of Thailand. The country's efforts for effective fisheries management for Indo-Pacific mackerel have continued up to the present.

Although the information on migration patterns of Indo-Pacific mackerel within the country's EEZ in the Gulf of Thailand sub-region is already available for almost 30 years, however, the recent result from genetic analysis of Indo-Pacific mackerel using the individual assignment and mixed-stock analysis shows the contradictory migratory behavior of the species between the stock in the inner Gulf of Thailand and the stock in the eastern part of the Gulf of Thailand (Kongseng et al., 2020). Additionally, the population from Pattani Province may also migrate across the eastern Gulf of Thailand through the southern part of Viet Nam and Cambodia waters. Such results indicated that Indo-Pacific mackerel is transboundary species, and joint management cooperation at the regional or sub-regional levels among countries that harvested Indo-Pacific mackerel is necessary for sustainable management.

Regional Consultative Meeting on Drafting of the Regional Action Plan for Management of Transboundary Species, Indo-pacific Mackerel was held at Bay Beach Resort, Jomtien, Chonburi Province, Thailand (12th – 13th September 2019).

CHAPTER 5: PROVISIONS OF THE REGIONAL ACTION PLAN

There are a number of international instruments aiming at conservation and management of marine resources, e.g., the 1982 United Nations Convention on the Law of the Sea (UNCLOS), the United Nations Fish Stock Agreement (UNFSA), and the UN Sustainable Development Goal (SDG) 14. These instruments also support initiatives in combating illegal fishing towards sustainable use of seas and marine resources and enhancing the environmental, economic, and social well-being of coastal fishers and communities. At the regional level, the ASEAN-SEAFDEC Resolution and Plan of Action on Sustainable Fisheries for Food Security for the ASEAN Region adopted by the ASEAN-SEAFDEC Member Countries in 2001 and 2011 also specified the importance of establishing and implementing effective fisheries management through ecosystems approach by integrating habitat and fisheries resources and increasing social and economic benefit to all stakeholders and applying knowledge/science-based development and management of fisheries.

It recognizes the need to strengthen cooperative efforts among countries toward sustainable utilization of the marine resources, particularly the Indo-Pacific mackerel, a critical transboundary resource in the Gulf of Thailand. SEAFDEC with the funding support from the Government of Sweden through the SEAFDEC-Sweden Project on “Fisheries and Habitat Management, Climate Change and Social Well-being in Southeast Asia” and the SEAFDEC/UNEP/GEF Project on “Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand (Fisheries Refugia)” therefore facilitated discussion among the Gulf of Thailand countries to develop the Regional Action Plan (RAP) for Management of Indo-Pacific mackerel. The RAP contains five Sections, namely:

Section 1: Introduction

Section 2: Stock Status of Indo-Pacific mackerel

Section 3: Issues, Knowledge Gaps, and Challenges

Section 4: Required Regional Cooperation for Management of Transboundary Species

Section 5: Provisions of the RAP including goal, outcomes, objectives, and actions.

The Provisions of RAP were categorized into five dimensions, which are: 1) Governance; 2) Social; 3) Economic, 4) Ecosystem; and 5) Climate Change. These five dimensions were aligned with the concept of the Ecosystem Approach to Fisheries Management (EAFM).

This RAP for Management of Indo-Pacific mackerel is a non-legal binding document meant to serve as a foundation to identify practices and processes that support the implementation of the relevant ASEAN-SEAFDEC Resolution and Plan of Action. It marks an evolutionary step towards a concerted regional approach to support countries’ efforts to manage the transboundary fish stock in the Gulf of Thailand.

5.1) THE GOAL OF REGIONAL ACTION PLAN

The Regional Action Plan is intended to serve as a guide for concerned countries in implementing actions to achieve the goal of

“Sustainable Indo-Pacific mackerel fisheries in the Gulf of Thailand sub-region through science-based management for the shared benefit to the other ASEAN Member States by 2030”

5.2) EXPECTED OUTCOMES

- 1) Healthy Indo-Pacific mackerel resources through the implementation of fishery management plan of the Gulf of Thailand.
- 2) Accurate and comprehensive information on Indo-Pacific mackerel of the Gulf of Thailand.
- 3) Model for development of management plan for Indo-Pacific mackerel that could be applicable to other sub-regions.

5.3) ACTIONS

A) GOVERNANCE DIMENSION

Overall Objective:

Regional/sub-regional fisheries management mechanism is in place building upon national regulations and management scheme.

Specific Objectives

- A1. Fisheries management mechanism developed and approved (including fisheries management plan and arrangement, the effect of regulation)
- A2. The data management system is enhanced and considered regional/sub-regional standardization data management system in place.
- A3. The standard for assessing fishing effort large, medium and small-scale fishery agreed.
- A4. Understandings on national law and management schemes within the sub-regional are communicated and applied.
- A5. Impact of unregulated and unreported fishing assessed.
- A6. Catch documentation system applied as a tool to improve traceability of the short mackerel fishery.

| Knowledge Gaps/Issues | Actions | Ref. | Responsibility |
|---|---|------|---|
| Insufficient catch and landing data | Develop the SOP/technical guidance for data collection (including catch data, biological data) | A2 | <ul style="list-style-type: none"> • SEAFDEC • University • Government agency • Fishery research institute |
| | To further develop catch documentation | A2 | |
| | Harmonization/standardized on data collection and develop database system | A2 | |
| Insufficient biological data collection | Conduct capacity building program for data collection to enumerator and scientist, researchers | A3 | <ul style="list-style-type: none"> • SEAFDEC • University • Government agency • Fishery research institute |
| | Conduct time series data collection with standardized method | A3 | |
| Insufficient Fishing effort (include commercial and small scale) | Link to the catch documentation include commercial and small-scale fishery (as available) | A4 | <ul style="list-style-type: none"> • Government and Private sector |
| | Regular monitor data collection on fishing effort capture production (include commercial and small scale) | A4 | |
| Fisheries Management Mechanism (including fisheries management plan and arrangement, the effective of regulation) | Develop fisheries management plan for short mackerel at national and sub-regional level | A1 | <ul style="list-style-type: none"> • SEAFDEC • University • Government agency • Fishery research institute • All stakeholder (fishers, others) |
| | Initiative on development of harvesting strategy | | |

| | | | |
|--|--|----|---|
| | Establish regional cooperation on monitoring, control and surveillance | A1 | <ul style="list-style-type: none"> Existing national MCS partners/network |
| | Raise awareness of both small-scale fishers and commercial-scale fishers <ul style="list-style-type: none"> Policy and regulations Management measures Sustainable utilization Involvement the participation, considering gender sensitivity | A1 | <ul style="list-style-type: none"> SEAFDEC University Government agency Fishery research institute All stakeholder |
| | Promote stakeholder consultation among researchers, managers and stakeholders using EAFM | A1 | <ul style="list-style-type: none"> SEAFDEC University Government agency Fishery research institute All stakeholder International organizations (FAO, NOAA, etc) |
| | Conduct habitat conservation and rehabilitation and conduct stock enhancement programs | A1 | <ul style="list-style-type: none"> SEAFDEC University Government agency Fishery research institute All stakeholder |
| Understanding national law and regulations | Comparative review of national law and regulations, (including local wisdom) | A5 | <ul style="list-style-type: none"> Government and resource person |
| | Disseminate knowledge and information on the conservation and management of Indo-pacific mackerel to fisheries communities and students | A5 | <ul style="list-style-type: none"> Government Other stakeholders |
| Flexibility of regulation to respond to science advise | Encourage periodic evaluation of policy and regulation | A1 | <ul style="list-style-type: none"> Government |
| Management schemes/arrangements including transboundary aspects. | Develop management schemes/arrangements at sub-regional area including transboundary aspects | A1 | <ul style="list-style-type: none"> SEAFDEC University Government agency |
| | Support establishment of regional cooperation/management mechanism (non-legal binding and scientific advisory committee) | A1 | <ul style="list-style-type: none"> Fishery research institute All stakeholders |
| Illegal, Unregulated and Unreported Fishing | Assessing the impact of Illegal, Unregulated and Unreported Fishing | A6 | <ul style="list-style-type: none"> Government and resource person |
| | Strengthen the Monitoring, Control and Surveillance network against the illegal fishing (none legal binding) | A6 | <ul style="list-style-type: none"> Inter-agencies coordination |
| Traceability system for fish and fishery product (using electronic logbook, etc) | Develop the catch documentation that suitable for traceability system e.g. electronic logbook, etc. | A6 | <ul style="list-style-type: none"> Government and resource person |

B) SOCIAL DIMENSION

Overall Objective:
Social responsibility and involvement in fisheries management achieved

Specific Objectives:

B1. Understanding the social condition of people involving in the fishery at the local and national level.

B2. Increase participation and involvement of stakeholders at various levels.

B3. Resolve conflict on land and resource use

B4. Build awareness and capacity at all level.

| Knowledge Gaps/Issues | Actions | Ref. | Responsibility |
|--|---|------|---|
| Social and economic at local and national level | Conduct a baseline survey based on available information on social and economic at local and national level (S) | B1 | <ul style="list-style-type: none"> Government University |
| Traditional fishing (indigenous knowledge and social responsibility) | Improve and disseminate the best practice to other (indigenous people) | B1 | <ul style="list-style-type: none"> Government |
| People engagement in fishery activity (include small scale fishery and large scale/commercial fishery, processing) | Conduct stakeholder analysis for understanding the important and influence of stakeholder in various level | B2 | <ul style="list-style-type: none"> Government University |
| People engagement in policy making (fisherfolk organization, academy, private sector, | Promote Public Private Partnership | B2 | <ul style="list-style-type: none"> Government |
| | Promote multi stakeholder engagement in policy making | B2 | <ul style="list-style-type: none"> Government and relevant stakeholder |

| | Fishing gear technology for eco-friendly (Reduce bycatch, cost and expenditures | | |

C) ECONOMIC DIMENSION

Overall Objective:

Equal distribution of economic benefit, economic return, and employment opportunities

Specific Objectives:

- C1. Ensure the national government and private sector commitment for long-term funding and support.
- C2. Understanding the structure and ownership of assets within the fishing industry (large, medium, and small scale).
- C3. Maximized economic benefit return for management response and reduced unequal distribution.

| Knowledge Gaps/Issues | Actions | Ref. | Responsibility |
|--|--|------|--|
| Funding | To ensure the national government commitment for long-term funding and support | C1 | <ul style="list-style-type: none"> • Government • Private sector • Funding agency/donor |
| | Explore various potential donor | C1 | |
| | Promote capital access through micro finance scheme | C1 | |
| | Promote corporate social responsibility | C1 | |
| Structure and ownership of asset within the fishing industry (large and small scale) | Review structure and ownership of asset within the fishing industry (large, medium and small scale) for management responses | C2 | <ul style="list-style-type: none"> • Government • Resource person |
| Benefit and economic return and unequal distribution | Assess benefit and economic return throughout the value chain | C3 | <ul style="list-style-type: none"> • Government • Resource person |
| Increase of cost (fuel and other inputs) | To ensure the fuel and other input exist for local fishermen | C3 | <ul style="list-style-type: none"> • Government |
| Fisheries employment revenue | To create the alternative work | C3 | <ul style="list-style-type: none"> • Government • Private Sector • Relevant stakeholder |
| | Require the contract among people engage in fishing | | |

D) ECOSYSTEM DIMENSION

Overall Objective:
Maintain a healthy ecosystem for the wellbeing of short mackerel resources

Specific Objectives:

D1. Understand current status and improve the knowledge of short mackerel resources for scientific-based management

D2. Understand various habitats of short mackerel throughout its life cycle

| Knowledge Gaps/Issues | Actions | Ref. | Responsibility |
|---|---|------|---|
| Migratory route | Update, further define and confirm the migratory route at national, sub-regional or regional area | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, • National Research Institutions, • Regional Institutions |
| | Conduct tagging program, e-DNA, DNA | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions |
| Spawning and nursery grounds (including dispersion and distribution of fish larvae) | Conduct comprehensive larvae survey (e.g. ichthyoplankton) | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions |
| | Study on critical habitats | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, |
| Seasonal changes | Conduct comprehensive larvae survey (e.g. ichthyoplankton) | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| | Conduct reproductive biology study | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| Physical and chemical oceanographic conditions and ocean circulation | Conduct oceanography survey | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| | Develop oceanographic modelling | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, |

| | | | |
|--|---|----|--|
| | | | <ul style="list-style-type: none"> • Research Institutions, IOC/WESTPAC |
| | Conduct satellite imagery (GIS, remote sensing) analysis | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions |
| Stock structure | Conduct DNA study, otolith, tagging, etc. | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| Stock status at national and regional of <i>R. brachysoma</i> (distribution and abundance) | Conduct stock assessment at national, sub-regional or regional level | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| | Share data, information and findings from scientific research to relevant stakeholders | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| | Standardized data collection for regional stock assessment | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| | Develop modeling for stock assessment | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC, • FAO |
| Species Identification | Provide capacity building on species identification of small size (juvenile) and larval fishes | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| Status and Trends | Investigate the trend of short mackerel catch at national, sub-regional levels | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| Population dynamics (Growth parameters, mortalities etc. | Conduct survey on fisheries biology | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions |
| Impact of fishing effort on stock structure (Multi-fishing gears to harvest) | Conduct study on impact of fishing effort on stock structure (Multi-fishing gears to harvest) to improve the fishery management | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |

| | | | |
|--|--|------|---|
| | Enhance Fishing gear technology for eco-friendly (Reduce bycatch, cost and expenditures) | D2 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC |
| Stock assessment and distributions for transboundary species | Enhance the cooperation for information sharing among the bordering countries | D1 | <ul style="list-style-type: none"> • Fisheries Agencies, • SEAFDEC |
| Capacity building and experts exchange | Training, workshop, conference and experts exchange | D1,2 | <ul style="list-style-type: none"> • Fisheries Agencies, • Research Institutions, • SEAFDEC, FAO, UNEP-GEF |

E) CLIMATE CHANGE DIMENSION

Overall Objective:

Adaptive management based on understanding the impact of climate change and disaster

Specific Objectives:

- E1. adaptive management measures **in place** in response to the impact of climate change and disaster on short mackerel fisheries and habitats
- E2. mitigation and precautionary measures **adopted** to compensate for the effects of climate change

| Knowledge Gaps/Issues | Actions | Ref. | Responsibility |
|--|---|------|---|
| Impact of climate change to fish migration route | Assess the impact of climate change/disaster/anthropogenic activities to fish migration route, habitat and behavior | E1 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, • SEAFDEC, UNEP-GEF, UNDP, FAO |
| | Study effect of environmental changes on the migratory pattern and spawning patterns based on climate change | E1 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, • SEAFDEC, UNEP-GEF, UNDP, FAO |
| | Share information from the findings of scientific research to both fisheries managers and fishers | E2 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, • SEAFDEC, UNEP-GEF, UNDP, FAO |
| Sensitivity of species on critical habitats and environment impact to ecosystem (pollution, climate change, etc) | Conduct study on sensitivity of species on environment change (pollution, climate change, etc) to support the management response | E1 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, • SEAFDEC, UNEP-GEF, UNDP, FAO |
| | Study on the critical habitats (spawning and grounds) | E1 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, |

| | | | |
|--|--|----------|---|
| | | | <ul style="list-style-type: none"> • SEAFDEC, UNEP-GEF, UNDP, FAO |
| | Study effect of environmental changes on the migratory pattern and spawning patterns | E1 | <ul style="list-style-type: none"> • Fisheries and Environmental Agencies, • Research Institutions, • SEAFDEC, UNEP-GEF, UNDP, FAO |

**ANNEX 12 THE THIRD REGIONAL TRAINING WORKSHOP ON LARVAL FISH IDENTIFICATION
AND FISH EARLY LIFE HISTORY SCIENC (ADVANCED COURSE)**

Executive Summary

Due to the lack of scientists on fish larval identification, SEAFDEC, in collaboration with GEF/UNEP project "Reversing Environment Degradation Trends in the SCS and GoT" in 2007 and 2008, organized the Regional Training Courses on the larval fish identification. This matter was raised again at the Regional Scientific and Technical Committee Meeting with the high demand for training on fish larvae identification to support the activities of the SEAFDEC/UNEP/GEF Project on establishment and operation of a regional system of fisheries refugia in the SCS and GoT. In collaboration with the SEAFDEC Training Department, the advanced course to enhance the scientist's keying and identification of species was developed in 2019 (see Appendix 1). The PCU proposed the Regional Training Workshop on Larval Fish Identification and Fish Early Life History Science based at the 3rd RSTC in Viet Nam, which expects to conduct the training course in 2020. In response to capacity-building requirements on fish larvae identification, the PCU prepares \$10.5K to support the larval fish identification activities. However, the covid-19 pandemic has seriously impacted traveling across countries from early 2020 until the present. The PCU considers that it is a low possibility to succeed in conducting the training workshop in 2021.

The SEAFDEC/PCU, therefore, wants to consult with the committee on modification of the allocated budget to produce the publications related to Larval Fish Identification and Fish Early Life History Science guidebook or other related activities that should be useful to SEAFDEC Member Countries.

ACTIONS BY THE RSTC4:

- ❖ Take notes and endorse the request from SEAFDEC/PCU to spend the allocated budget to produce the publications/guidebooks related to Larval Fish Identification and Fish Early Life History Science.
- ❖ To provide comments and suggestion on the way forward on the above subject.

Appendix 1: Program and Syllabus

| Date/Time | Training Activity/Topic | Resource Person | Note |
|--------------------------|---|--|------|
| Day 1 - Sunday | | | |
| | Participants arrive at SEAFDEC Training Department, Samut Prakan, Thailand | SEAFDEC Personnel | |
| Day 2 - Monday | | | |
| 0900-1000 | Opening ceremony & group photo | SEAFDEC & SEAFDEC-UNEP project | |
| 1000-1020 | Refreshment | SEAFDEC Personnel | |
| 1020-1040 | Brief on schedule and anticipated output | SEAFDEC Personnel | |
| 1040-1200 | Country report on the implementing plan of the fisheries resources refugia project | Participants (Cambodia, Philippines, Thailand and Vietnam) | (a) |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1430 | Lecture: Review on morphological development of larval fish characters | Yoshinobu Konishi | (b) |
| 1500-1700 | Lecture & Practice: Method for calculation of abundance of fish larvae collected by net sampling | Yoshinobu Konishi and SEAFDEC Personnel | |
| Day 3 - Tuesday | | | |
| 0900-1000 | Lecture: Identification methods of the Scombridae larvae and juveniles in the Southeast Asian region | Yoshinobu Konishi | © |
| 1030-1200 | Practice: Species identification and morphological description of the Scombridae larvae and juveniles - 1 | Instructor Team | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Practice: Species identification and morphological description of the Scombridae larvae and juveniles - 2 | Instructor Team | (d) |
| Day 4 - Wednesday | | | |
| 0900-1200 | Practice: Species identification and morphological description of the Scombridae larvae and juveniles - 3 | Instructor Team | (e) |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1430 | Lecture: Identification methods of the Carangidae larvae in the Southeast Asian region | Yoshinobu Konishi | |
| 1500-1700 | Practice: Species identification and morphological description of the Carangidae larvae - 1 | Instructor Team | |
| Day 5 - Thursday | | | |
| 0900-1200 | Practice: Species identification and morphological description of the Carangidae larvae - 2 | Instructor Team | (f) |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Practice: Species identification and morphological description of the Carangidae larvae - 3 | Instructor Team | |
| Day 6 - Friday | | | |
| 0900-1000 | Lecture: Identification methods of the Engraulidae larvae in the Southeast Asian region | Yoshinobu Konishi | |
| 1030-1200 | Practice: Species identification and morphological description of the Engraulidae larvae - 1 | Instructor Team | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |

| | | | |
|---------------------------|---|--|--|
| 1330-1700 | Practice: Species identification and morphological description of the Engraulidae larvae - 2 | Instructor Team | |
| Day 7 - Saturday | | | |
| | Rest Day | | |
| Day 8 - Sunday | | | |
| 0900-1200 | Practice: Species identification and morphological description of the Engraulidae larvae - 3 | Instructor Team | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Presentation of case study on early life history science based on the references for planning of future working subjects in participating countries | Participants (Cambodia, Philippines, Thailand and Vietnam) | |
| Day 9 - Monday | | | |
| 0900-1200 | Lecture: Identification methods of the Lutjanidae, Siganidae and serranid Epinephelinae larvae in the Southeast Asian region | Yoshinobu Konishi | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Practice: Species identification and morphological description of the Lutjanidae, Siganidae and serranid Epinephelinae larvae - 1 | Instructor Team | |
| Day 10 - Tuesday | | | |
| 0900-1200 | Practice: Species identification and morphological description of the Lutjanidae, Siganidae and serranid Epinephelinae larvae - 2 | Instructor Team | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Practice: Species identification and morphological description of the Lutjanidae, Siganidae and serranid Epinephelinae larvae - 3 | Instructor Team | |
| Day 11 - Wednesday | | | |
| 0900-1200 | Practice: Species identification and morphological description of the Lutjanidae, Siganidae and serranid Epinephelinae larvae - 4 | Instructor Team | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1700 | Preparation of presentation on species identification and morphological descriptions of examined larvae and juveniles, and on future working subjects to be planned | Yoshinobu Konishi Rangsan Chayakul Teerapong Duandee | |
| Day 12- Thursday | | | |
| 0900-1200 | Presentation on results of species identification and morphological descriptions of examined larvae and juveniles, and on future working subjects to be planned | Yoshinobu Konishi Rangsan Chayakul Teerapong Duandee | |
| 1200-1330 | Lunch break | SEAFDEC Personnel | |
| 1330-1430 | Closing ceremony | SEAFDEC Personnel | |
| 1800-2200 | Farewell Dinner | SEAFDEC Personnel | |
| Day 13- Friday | | | |
| | Participants leave SEAFDEC/TD for Home Countries | SEAFDEC Personnel | |

Notes:

- a) including an explanation of larval fish samples brought from participating countries for this course
- b) 0. Morphological characters, 1. Body shape (BD, HD, Preanal length), 2. Fin formation (two D-fin shape, delayed form of 3rd anal spine, precocious pelvic fin), 3. Sequence of fin formation, 4. Pigment, 5. Head spines
- c) Mainly Identification key to genus (species) for the scombrid juvenile fishes (making a flow chart of the procedure)
- d) Larvae: comparison with the other scombrid and similar family larvae (numbers of specimen and size range of each species to be provided to the workshop from the participating countries should informed in advance)
- e) Juveniles: distinguish from other scombrids by meristic characters (Auxis vs Euthynnus- an idea & trial of measurement method: horizontal distance between 1st and 10th spine of first dorsal fin/horizontal distance between origins of 1st and 2nd dorsal fin) "
- f) Hand-on work to count a total number of vertebrae with fresh specimen (and fixed Auxis juvenile)
- g) Larvae: abundant resources species - Decapterus spp., Selar crmenophthalmus(S. boops), Selaroides leptolepi; stail unknown species - Megalapsis cordyala

ANNEX 13 TERMS OF REFERENCE of the Mid-term Review of the SEAFDEC/UNEP/GEF PROJECT: “Establishment and Operation of a Regional System of Fisheries Refugia In the South China Sea and Gulf of Thailand” (GEF ID 5401)

•

Executive Summary

The purpose of the Mid-Term Review (MTR) is to provide an independent assessment of project performance at mid-term, to analyze whether the project is on track, what problems and challenges the project is encountering, and which corrective actions are required so that the project can achieve its intended outcomes by project completion in the most efficient and sustainable way.

The TOR consists of three sections: 1) Project background and overviews, 2) Objective and scope of the mid-term review, and 3) Mid-term review approach, methods and deliverables. The Mid-term Review will be in-depth evaluations using a participatory approach whereby key stakeholders are kept informed and consulted throughout the evaluation process. Both quantitative and qualitative evaluation methods will be used as appropriate to determine project achievements against the expected outputs, outcomes and impacts of the projects

The Mid-term Review consultant will be selected and recruited by the SEAFDEC under an individual Special Service Agreement (SSA). By signing the service contract with SEAFDEC, the consultant certify that he/she has not been associated with the design and implementation of the FR Project in any way which may jeopardize his or her independence and impartiality towards project achievements and project partner performance. Tentative schedule for the Mid-term Review is finalized soon before official announcement.

ACTIONS BY THE RSTC4 COMMITTEE:

- ❖ Take note on the preparation for TOR for Mid-Term Reviews
- ❖ For consideration, clarification and suggestion on the proposed TOR for Mid-term reviews.

TERMS OF REFERENCE

Mid-term Review of the SEAFDEC/UNEP/GEF PROJECT: “Establishment and Operation of a Regional System of Fisheries *Refugia* In the South China Sea and Gulf of Thailand” (GEF ID 5401)

INTRODUCTION

This Terms of Reference (TOR) is for the Mid-Term Review (MTR) of the UNEP/GEF-SEAFDEC project on “Establishment and Operation of a Regional System of Fisheries *Refugia* in the South China Sea and Gulf of Thailand”, hereafter called “*FR project*”. The purpose of the Mid-Term Review (MTR) is to provide an independent assessment of project performance at mid-term, to analyze whether the project is on track, what problems and challenges the project is encountering, and which corrective actions are required so that the project can achieve its intended outcomes by project completion in the most efficient and sustainable way.

SECTION 1: PROJECT BACKGROUND AND OVERVIEW

1. Project General Information (Table 1)

Table 1: General information of the FR Project

| | <i>Revised</i> | <i>December 31, 2022</i> |
| Expected Terminal Evaluation Date | <i>TBD</i> | |
| Expected Financial Closure Date | <i>TBD</i> | |

2. Project Rationale

- 1) The South China Sea is a global center of shallow water marine biological diversity that supports significant fisheries that are important to the food security and export income of Southeast Asian countries. These fisheries are characterized by high levels of fishing effort from the small-scale sector. Accordingly, all inshore waters of the South China Sea basin are subject to intense fishing pressure. This situation of high small-scale fishing pressure and declining fisheries resources has contributed to the adoption of unsustainable fishing methods to maintain catch and increase incomes in the short-term. These include the use of destructive fishing gear and practices, such as the operation of demersal trawls and push nets in seagrass areas, and the detonation of explosives and release of fish poisons in coral reef areas. Small-scale inshore fishing pressure has therefore been identified as a significant cause of the degradation and loss of coastal habitats in the South China Sea.
- 2) Although action aimed at reducing the rate of loss of coastal habitats has been implemented by countries bordering the South China Sea, the decadal rate of loss of such habitats remains high, e.g., seagrass beds (30 percent), mangroves (16 percent), and coral reefs (16 percent). This continued decline in the total area of habitats critical to the life cycles of most aquatic species, combined with the high levels of coastal community dependence on fish, has raised serious concerns for the long-term sustainability of small-scale fisheries in the region. With fish production being intrinsically linked to the quality and area of habitats and the heightened dependence of coastal communities on fish, a need exists to improve the integration of fish habitat considerations and fisheries management in the region. This project entitled "Establishment and Operation of a Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand" has been developed to meet this need via

implementation of the fisheries component of the Strategic Action Program for the South China Sea. Executed regionally by the Southeast Asian Fisheries Development Center in partnership with the government agencies responsible for fisheries in the 6 participating countries, the project is comprised of the following 4 project components.

- 3) Component 1 will result in the establishment of operational management at 14 priority fisheries refugia, with community-based refugia management plans being key outputs. Supporting activities include consultative processes to facilitate agreement among stakeholders on the boundaries of fisheries refugia, identification of key threats to refugia sites, recording of fishing community views regarding appropriate fisheries and habitat management measures, and eliciting stakeholder inputs to management plan review. Refugia management plans will provide rules inter alia on operating requirements for the use of particular classes of fishing vessels or fishing gear within refugia, procedures for adjusting management measures over time, and mechanisms for enforcement. Specific direction is given to drafting of regulations and ordinances required in support of plan implementation.
- 4) Component 2 focuses on strengthening the enabling environment for the formal designation and operational management of refugia. Preparatory activities include legal reviews to identify, inter alia: legal terminology for describing refugia; formal procedures for demarcating boundaries of spatial management areas such as refugia, including requirements for assessing the socio-economic impacts of management measures and stakeholder consultation; and provisions for decentralizing refugia management to the community level via development of co-management and rights-based approaches. These national reviews are aimed at informing the drafting of required policy and legislative amendments for adoption by competent authorities. This component will also build the national and site-level science and information base required to inform the monitoring and evaluation of the effectiveness of individual refugia and the regional network of sites.
- 5) Component 3 focuses on strengthening information management and dissemination aimed at enhancing the national uptake of best practices in integrating fisheries management and biodiversity conservation, and in improving community acceptance of area-based approaches to fisheries and coastal environmental management. Supporting activities involve the development of national knowledge management systems on the use of fisheries refugia in capture fisheries management, and the establishment of a Regional Education and Awareness Centre that will operate as a facility for the production and sharing of information and education materials on fisheries and critical habitat linkages in the South China Sea. Importantly, Component 3 will support the development of indicators to monitor the effectiveness of coastal fisheries management systems established for priority fisheries refugia. A regional program for the compilation of standardized fisheries statistics for use in identifying and managing fisheries refugia will also be developed to support longer-term management.
- 6) At the national-level, Component 4 will strengthen cross-sectorial coordination for integrated fisheries and environmental management and will harness the national scientific and technical expertise and knowledge required to inform the policy, legal and institutional reforms for fisheries refugia management in the participating countries. Local community action and strengthened 'community to cabinet' linkages will be facilitated via establishment and operation of site-based management boards for fisheries refugia at the 14 priority locations in the South China Sea. Regionally, Component 4 will foster regional cooperation in: the establishment and operation of a regional system of fisheries refugia; and in the integration of scientific knowledge and research outputs with management and policy making. This component also includes project coordination and management activities aimed at: ensuring the timely and cost-effective implementation of regional and national-level activities; and satisfying the reporting requirements of UNEP and the GEF.
- 7) The longer-term goals of this project are to contribute to: improved integration of habitat and biodiversity conservation considerations in the management of fisheries in the South China Sea and

Gulf of Thailand; improved national management of the threats to fish stock and critical habitat linkages within fisheries refugia; and enhanced uptake of good practice in integrating fisheries management and biodiversity conservation in the design and implementation of regional and national fisheries management systems. The medium-term objectives align with those of the fisheries component of the Strategic Action Program for the South China Sea which are to: build the resilience of Southeast Asian fisheries to the effects of high and increasing levels of fishing effort; improve the understanding among stakeholders, including fisherfolk, scientists, policy-makers, and fisheries managers, of ecosystem and fishery linkages as a basis for integrated fisheries and ecosystem/habitat management; and build the capacity of fisheries departments/ministries to engage in meaningful dialogue with the environment sector regarding the improvement of fisheries and management of interactions between fisheries and critical marine habitats. Related end of project targets are:

- a. by 2022, to have established a regional system of a minimum of fourteen refugia for the management of priority transboundary, fish stocks and endangered species; and
 - b. by 2022, to have prepared and implemented fisheries management systems in the identified priority refugia based on and consistent with, the ASEAN SEAFDEC Regional Guidelines for Responsible Fisheries in Southeast Asia.
- 8) Given the limited integration of the work of fisheries and environment ministries observed in Southeast Asia and many other parts of the world, the establishment and operation of the regional system of fisheries refugia provides an opportunity to learn from a regional fishery sector led initiative to collaborate with the environment sector on integrating fisheries and coastal habitat management. It is anticipated that the experience gained in the South China Sea region through this project will be suitable for application in other marine areas such as the Yellow Sea where over-fishing and the use of inappropriate fishing gear are significant impediments to more sustainable exploitation of fisheries resources and the use of coastal habitats.

3. Project Results Framework

- 9) The objective of this project is to operate and expand the network of fisheries refugia in the South China Sea and the Gulf of Thailand for the improved management of fisheries and critical marine habitats linkages to achieve the medium and longer-term goals of the fisheries component of the Strategic Action Program for the South China Sea. The project has four components as listed in **Table 2-5** below with associated expected outcomes and outputs.

Table 2: FR Project Results Framework: Component 1.

| Component 1: | Outcomes | Targets End of Project |
|--|---|--|
| 1. Identification and management of fisheries and critical habitat linkages at priority fisheries <i>refugia</i> in the South China Sea and Gulf of Thailand | 1. Reduced stress on fish stocks and coastal habitats via improved national management of key anthropogenic threats to fisheries and critical habitat linkages in the South China Sea and Gulf of Thailand | <i>Effective management of key threats to 14 fisheries refugia sites [269,500 ha], including ~50 percent reduction in fishing pressure within sites at times critical to the life-cycles of fished species of transboundary significance</i> |
| | 1.1 Fisheries and critical habitat linkages at 14 priority sites in the South China Sea and Gulf of Thailand safeguarded via the delineation of fisheries <i>refugia</i> boundaries and the setting of priorities for <i>refugia</i> management | Agreement among stakeholders on the boundaries of fisheries <i>refugia</i> , key threats to <i>refugia</i> , and priority management interventions for 14 sites in the South China Sea and Gulf of Thailand |
| | 1.2 Amelioration of key threats to fish stock and critical habitat linkages via the adoption and implementation of | Community-based <i>refugia</i> management plans that are consistent with the FAO and ASEAN-SEAFDEC Guidelines for Responsible |

| | | |
|--|---|--|
| | community-based <i>refugia</i> management plans at 14 sites | Fisheries developed, adopted, and under implementation at 14 fisheries <i>refugia</i> sites |
| | 1.3 Catalysed community action for fisheries <i>refugia</i> management at 14 sites | Networks of management boards and community-based fisheries and habitat management volunteers for <i>refugia</i> management established at 14 fisheries <i>refugia</i> sites |
| | 1.4 Empowered fishing communities, particularly artisanal fishermen and women involved in inshore gleaning and processing, for enforcement of agreed management rules at 14 priority <i>refugia</i> sites in the South China Sea and Gulf of Thailand | Enforcement programmes at 14 fisheries <i>refugia</i> sites, including participatory activities for monitoring, control and surveillance |
| | 1.5 Strengthened civil society and community organisation participation in fisheries <i>refugia</i> management | Operational partnership with the GEF Small Grants Programme to strengthen civil society and community organisation participation in the management of fisheries <i>refugia</i> at 14 sites |

10) The component 1 aligns with the GEF theory of change framework via implementing strategies, i.e., application of fisheries *refugia* to significantly reduce stress on fish stocks and coastal habitats. Specifically, component 1 will result in 269,500 ha of fish *refugia* habitat will be conserved/effectively managed as well as a 50% reduction in fishing pressure within sites at times critical to the life-cycles of fished species of transboundary significance.

Table 3: FR Project Results Framework: Component 2.

| Component 2: | Outcomes | Targets End of Project |
|---|--|---|
| 2. Improving the management of critical habitats for fish stocks of transboundary significance via national and regional actions to strengthen the enabling environment and knowledgebase for fisheries <i>refugia</i> management in the South China Sea and Gulf of Thailand | 2. Increased institutional capacity in the 6 participating countries for the designation and operational management of fisheries <i>refugia</i> via the transformation of enabling environments and the generation of knowledge for planning | National and regional policy, legal and planning frameworks for demarcating boundaries and managing fisheries <i>refugia</i> , resulting in, inter alia, a 20 percent increase in small-scale fishing vessels using fishing gear and practices designed to safeguard fish stock and critical habitat linkages at priority sites |
| | 2.1 Strengthened enabling environments for the effective management of the effects of fishing on fisheries and critical habitat linkages in the South China Sea and Gulf of Thailand | Measures for the fisheries sector's sustainable use of fish habitats and biodiversity, and based on site-level models of ecosystem carrying capacity, incorporated in the fisheries policies of participating countries |
| | 2.2 Cross-sectorial agreement on national guidelines for the use of fisheries <i>refugia</i> for integrated fisheries and habitat management | National guidelines on the use of fisheries <i>refugia</i> in integrating fisheries and habitat management developed and endorsed by heads of national government departments responsible for fisheries and environment in the participating countries |
| | 2.3 Endorsed policy, legal, and planning frameworks, both and national and regional levels, for the establishment and management of fisheries <i>refugia</i> , including the reduced use of destructive fishing gear and practices in areas of critical habitats | National policy, legal and planning frameworks for demarcating boundaries and managing <i>refugia</i> assessed and required reforms endorsed in the participating countries and reflected in an updated regional action plan |

| | | |
|--|--|---|
| | 2.4 Enhanced access to information relating to status and trends in fish stocks and their habitats in waters of the SCS | Annual synthesis reports of new and additional information and data relating to the stocks of priority fish, crustaceans and molluscs and their habitats published in each country and disseminated at national and regional levels |
| | 2.5 Improved national and regional-level management and sharing of information and data on fish early life history in the waters of the SCS | Establishment and population of 6 online national databases, and 1 regional database, of fish egg and larvae distribution and abundance in national waters and the SCS basin |
| | 2.6 Enhanced access to information relating to the locations and status of coastal habitats and management areas in the SCS and GoT | National and regional online Geographical Information Systems on fisheries and marine biodiversity featuring information on locations and management status of coastal habitats, fisheries <i>refugia</i> , MPAs, and critical habitats for threatened and endangered species |
| | 2.7 Strengthened information base for the planning, monitoring and evaluation of management at priority fisheries <i>refugia</i> sites in the South China Sea and GoT. | Fisheries and habitat data collection programmes operational to characterise 14 priority <i>refugia</i> sites in the South China Sea and Gulf of Thailand |
| | 2.8 Improved basin-wide understanding of linkages between ocean circulation patterns, nutrient/chlorophyll concentrations, and sources and sinks of fish larvae in the South China Sea | Modelling system linking oceanographic, biochemical, and fish early life history information developed applied to improve regional understanding of fish early life history and links to critical habitats |
| | 2.9 Regionally and locally appropriate best practices generated to address the effects of trawl and motorised push net ¹ fishing on seagrass habitat, and the capture of juveniles, pre-recruits and fish in spawning condition | Best practice fishing methods and practices to address key threats to fish stock and critical habitat linkages demonstrated at priority <i>refugia</i> |

11) The component 2 aligns with the GEF theory of change framework through strengthening institutional capacity via reform of policy, regulatory and planning frameworks aimed at enabling improved integration of fisheries and environmental management. Additionally, the component will lead to considerable stress reduction. Specifically, the demonstrations of best practice fishing methods and practices aimed at addressing key threats to fish stock and critical habitat linkages, and the adoption of supporting laws, will result in a 20% increase in vessels applying improved gear/techniques to safeguard fish stock and critical habitat linkages.

Table 4: FR Project Results Framework: Component 3.

| Component 3: | Outcomes | Targets End of Project |
|---|---|--|
| 3. Information Management and Dissemination in support of national and regional-level implementation of the fisheries <i>refugia</i> concept in the South China Sea | 3. Strengthened knowledge management and information sharing and access for enhanced uptake of good practice in integrating fisheries management and biodiversity conservation in the design and implementation of fisheries and environmental management systems, including Marine Spatial Planning | <i>National and regional systems for knowledge management and sharing, including the development of indicator sets and standardized statistics to guide the replication, scaling-up and mainstreaming of good practices in the use of fisheries refugia as a spatial planning tool</i> |

| | | |
|----------------------|--|---|
| and Gulf of Thailand | 3.1 Enhanced uptake of best practices in integrating fisheries management and biodiversity conservation, in the design and implementation of fisheries management systems | Best practice approaches and measures for integrated fisheries and habitat management captured, documented and communicated nationally and regionally |
| | 3.2 Improved community acceptance of area based approaches to fisheries and coastal environmental management | Public awareness and outreach programme to promote local social, economic and environmental benefits of fisheries <i>refugia</i> implemented at 14 priority locations in the South China Sea and Gulf of Thailand |
| | 3.3 Knowledge generated and experiences from establishing and operating fisheries <i>refugia</i> , captured and shared nationally, regionally, and globally | National knowledge management systems on the use of fisheries <i>refugia</i> in capture fisheries management established and operational |
| | 3.4 Information and Education Campaigns for small-scale fisherfolk on the links between fisheries, habitats and biodiversity coordinated regionally through a Regional Education and Awareness Centre | Regional Education and Awareness Centre on fisheries and critical habitats established and operating as a facility for the production and sharing of information and education materials for <i>refugia</i> management |
| | 3.5 Standardised methods for collection and analysis of information and data, for use in assessing the impacts of <i>refugia</i> and in the design appropriate indicators for the longer-term operation of the regional system of fisheries <i>refugia</i> | Regional agreement on standardised information and data collection procedures in support of longer-term operation of a regional system of fisheries <i>refugia</i> , including design of stress reduction and environmental state indicators for managed <i>refugia</i> |

12) The component 3 aligns with the GEF theory of change framework through knowledge and information activities aimed at improving information sharing and access, awareness raising, skills building, and monitoring and evaluation.

Table 5: FR Project Results Framework: Component 4

| Component 4: | Outcomes | Targets End of Project |
|---|--|--|
| 4. National and regional cooperation and coordination for integrated fish stock and critical habitat management in the South China Sea and Gulf of Thailand | Cost-effective and efficient coordination of national and regional level cooperation for integrated fisheries and environmental management | Effective multi-lateral and intergovernmental communication and joint decision-making, including the use of a consensual knowledge-base in planning ecologically and cost-effective management actions |
| | 4.1 Strengthened cross-sectorial coordination in the establishment and operation of fisheries <i>refugia</i> in the participating countries | National Fisheries <i>Refugia</i> Committees (NFRC) established in 6 countries, functional and advising national decision-makers and regional <i>fora</i> |
| | 4.2 National scientific and technical expertise and knowledge harnessed to inform policy, legal and institutional reforms for fisheries <i>refugia</i> management in the participating countries | National Technical and Scientific Committees (NTSC) established in 6 countries, functional and advising site-level management boards, the NFRC and the Regional Scientific and Technical Committee |
| | 4.3 Community-led planning of fisheries <i>refugia</i> management at priority locations in the South China Sea and Gulf of Thailand | Local community action catalysed via establishment and operation of site-based management boards for fisheries <i>refugia</i> at 14 locations in the South China Sea and Gulf of Thailand |
| | 4.4 Regional cooperation in the integration of scientific knowledge and | Regional Scientific and Technical Committee (RSTC) established and functioning as a bridge |

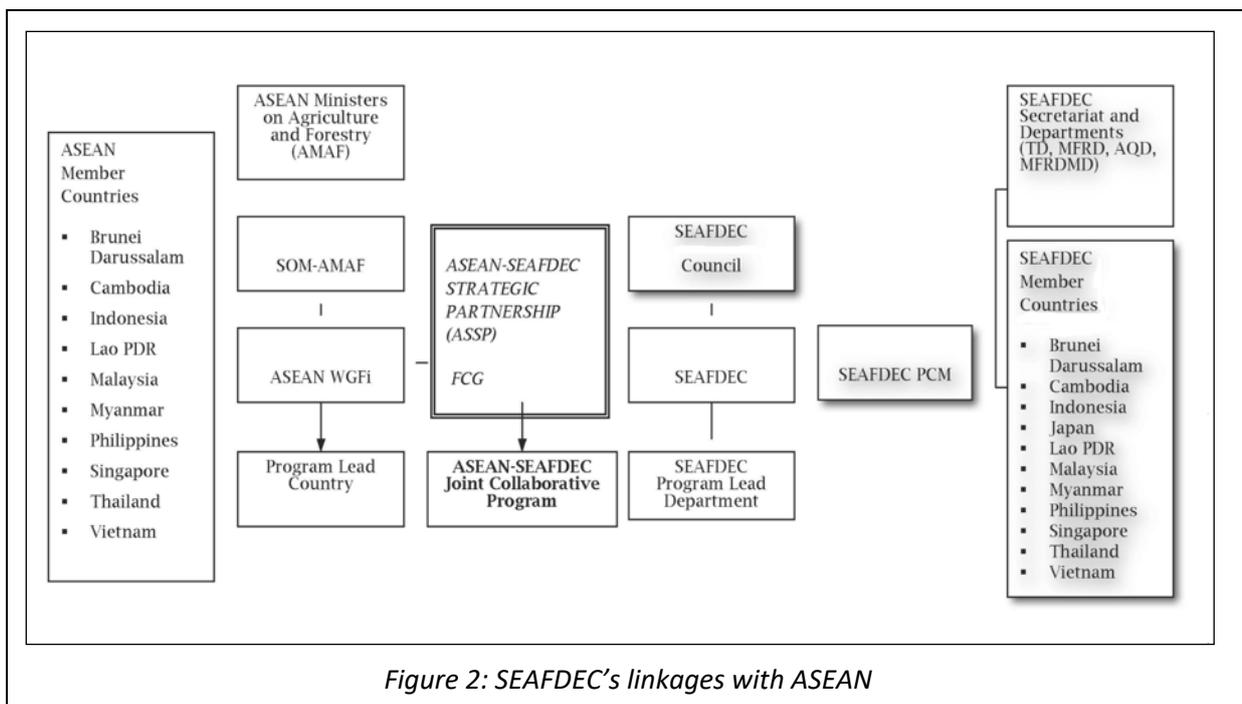

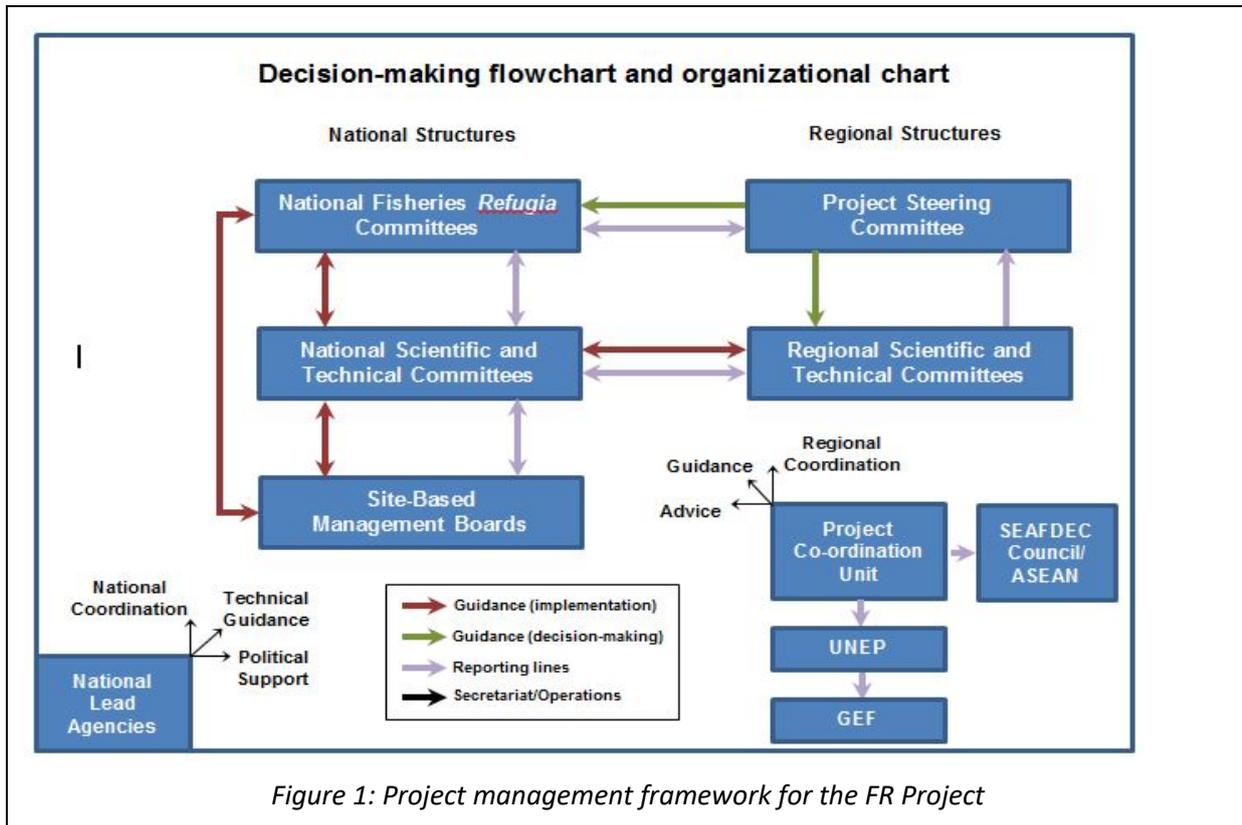

| | | |
|--|---|--|
| | research outputs with management and policy making | between the scientific community and decision-makers for operation of a regional system of fisheries <i>refugia</i> [biannual meetings] |
| | 4.5 Regional cooperation in the establishment and operation of a regional system of fisheries <i>refugia</i> | Project Steering Committee established and functioning to oversee and act as a principal decision-making body for the project |
| | 4.6 Effective coordination of regional and national-level activities and reporting requirements of UNEP and GEF satisfied | Functioning regional Project Coordinating Unit (PCU) supporting the coordination of regional and national level activities associated with the establishment and operation of regional system of fisheries <i>refugia</i> and meeting reporting requirements of UNEP and the GEF |

4. FR Project Executing Arrangements

- 13) UN Environment is the GEF Implementing Agency for the FR project. The project is executed regionally by the Southeast Asian Fisheries Development Center (SEAFDEC) in partnership with the government agencies responsible for fisheries in the six participating countries, namely Cambodia, Indonesia, Malaysia, Philippines, Thailand, and Viet Nam.
- 14) The Project Coordinating Unit (PCU) locates within the Training Department of SEAFDEC in Samut Prakan Province, Thailand.
- 15) The national lead partners are as follows:
- I. Administration of Fisheries (FiA), CAMBODIA
 - II. Directorate General of Capture Fisheries, Ministry of Marine Affairs and Fisheries (MMAF), REPUBLIC OF INDONESIA
 - III. Department of Fisheries (DOF), MALAYSIA
 - IV. National Fisheries Research and Development Institute (NFRDi) in collaboration with Bureau of Fisheries and Aquatic Resources (BFAR), Department of Agriculture (DA), the PHILIPPINES
 - V. Department of Fisheries (DOF), THAILAND
 - VI. Directorate of Fisheries (D-Fish), Ministry of Agriculture and Rural Department (MARD), VIET NAM
- 16) A Project Steering Committee was established and operated to oversee and act as a principal decision-making body for the project. The PSC's role is to provide managerial and governance advice to the project, and to guide the Project Coordination Unit (PCU) of the Southeast Asian Fisheries Development Centre (SEAFDEC) in the implementation and monitoring of the overall regional project.
- 17) At national level, National Fisheries Refugia Committees (NFRCs) was established and operated to strengthen cross-sectorial coordination in the establishment and management of fisheries refugia. The NFRC's will assume overarching responsibility for the execution of national level activities of the project and will, inter alia: receive, review, and approve reports from the management boards of refugia sites; consider advice from the National Scientific and Technical Committees in decision-making.
- 18) A regional Project Co-ordinating Unit (PCU) was established within SEAFDEC and will be led by a Project Director with support from SEAFDEC'S policy, technical and financial units. The PCU will be responsible for: overall leadership, management and technical oversight of the fisheries refugia project; regional project governance, monitoring and reporting; policy/technical advice and

advocacy; regional and national coordination, including the establishment of partnerships and networking; and external communications.

19) The management framework for this project is depicted in Figure 1. SEAFDEC’s linkages with ASEAN through the ASEAN-SEAFDEC Strategic Partnership is depicted in Figure 2.

5. Project Cost and Financing

20) The total cost of the FR project planned at \$15,717,850 with co-financing of \$12,717,850 and cost to the GEF Trust Fund of \$3,000,000. Table 6 provides an overview of sources of co-financing and Table 7 of cost per project component.

Table 6: an overview of sources of co-financing

| Sources of Co-financing | Name of Co-financier (source) | Type of Co-financing | Cofinancing Amount (\$) |
|---------------------------|---|----------------------|-------------------------|
| National Governments | Ministries responsible for fisheries in Cambodia, Indonesia, Malaysia, Philippines, Malaysia, Thailand, and Vietnam | Cash | 1,148,644 |
| National Governments | Ministries responsible for fisheries in Cambodia, Indonesia, Malaysia, Philippines, Malaysia, Thailand, and Vietnam | In-kind | 5,036,806 |
| Multilateral Agencies | Southeast Asian Fisheries Development Centre | Cash | 3,876,400 |
| Multilateral Agencies | Southeast Asian Fisheries Development Centre | In-kind | 2,456,000 |
| GEF Agency | UNEP | In-kind | 200,000 |
| Total Co-financing | | | 12,717,850 |

Table 7: Cost per Project Component

| Project Component | Indicative Grant Amount (\$) | Indicative Co Financing (\$) |
|---|------------------------------|------------------------------|
| 1. Identification and management of fisheries and critical habitat linkages at priority fisheries <i>refugia</i> in the South China Sea and Gulf of Thailand | 1,304,900 | 3,989,523 |
| 2. Improving the management of critical habitats for fish stocks of transboundary significance via national and regional actions to strengthen the enabling environment and knowledgebase for fisheries <i>refugia</i> management in the South China Sea and Gulf of Thailand | 746,000 | 5,313,217 |
| 3. Information Management and Dissemination in support of national and regional-level implementation of the fisheries <i>refugia</i> concept in the South China Sea and Gulf of Thailand | 299,600 | 1,792,055 |
| 4. National and regional cooperation and coordination for integrated fish stock and critical habitat management in the South China Sea and Gulf of Thailand | 499,500 | 1,423,055 |
| Sub-Total | 2,850,000 | 12,517,850 |
| Project Management Cost (PMC) | 150,000 | 200,000 |
| Total | 3,000,000 | 12,717,850 |

6. Project Implementation Issues

- 21) Changing of the key government officers create problems on delay submission for work progress and financing report.
- 22) Delay of the project implementation due to the government policy changes in two participating countries affected on achieving the Mid-term evaluation and End of Project Targets. All participating countries, therefore, requested two years of project extension without an extra budget. The Mid-term evaluation and the end of project evaluation will be conducted by the end of 2020 and 2022, respectively.

SECTION 2: OBJECTIVE AND SCOPE OF THE MID-TERM REVIEW

7. Objective of the Mid-Term Review

- 23) Objective of the Mid-term Review is to determine the progress, performance, and achievement of objectives and outcomes of the project following five years of implementation from 2016-2020.

8. Scope of the Mid-Term Review

- 24) The scope of the mid-term evaluation will cover all activities undertaken in the framework of the project. The evaluator will compare planned outputs of the project to actual outcomes and assess the actual results to determine their contribution to attaining the project objectives. The evaluation will diagnose problems and suggest any necessary corrections and adjustments. It will evaluate the efficiency of project management, including the delivery of outputs and activities in terms of quality, quantity, timeliness, and cost-efficiency. The evaluation will also determine the project's likely outcomes and impact concerning the project's specified goals and objectives.

SECTION 3: MID-TERM REVIEW APPROACH, METHODS AND DELIVERABLES

9. Approach and Methods

- 25) The Mid-term Review of the FR projects will be in-depth evaluations using a participatory approach whereby key stakeholders are kept informed and consulted throughout the evaluation process. Both quantitative and qualitative evaluation methods will be used as appropriate to determine project achievements against the expected outputs, outcomes and impacts of the projects. It is highly recommended that the consultant maintains close communication with the project teams and promotes information exchange throughout the evaluation implementation phase in order to increase their (and other stakeholder) ownership of the evaluation findings.
- 26) The findings of the evaluation will be based on the following:
 - i. Desk review of the project document, outputs, monitoring reports (such as quarterly progress reports, mission reports, and the GEF annual Project Implementation Review reports, minutes of meetings, and relevant correspondences.
 - ii. Review of specific products including datasets, management, and action plans, publications, and other material and reports.
 - iii. Interviews with the Project Director, the Project Task Manager, the Project Participating Countries, the Project Collaborative Partners (if required), and other project staff.
 - iv. Consultations with relevant SEAFDEC/SEC and SEAFDEC/TD staff.
 - v. Consultations and interviews with relevant stakeholders involved, including government representatives, local communities, NGOs, private sector, donors, and other UN agencies and international /regional organizations.
 - vi. Survey, as deemed appropriate of associated agencies of the FR Project

- vii. Country partner and project sites visits, are not deemed likely due to Covid-19 related travel restrictions, but if appropriated.

10. Deliverables

- 26) Under the overall supervision of the Project Task Manager and the TOR's Committee, SEAFDEC Secretary-General, relevant SEAFDEC/TD Division, and the overall guidance of the Project Director of the SEAFDEC Project Coordinating Unit, the evaluator shall undertake a MTR of the FR project during the period July 15th to October 15th, 2021.
- 27) The evaluation will comprise the following elements.
 - 27.1 A summary evaluation of the project and its major components are undertaken to date and determine progress towards achieving its overall objectives.
 - 27.2 Evaluate project performance with the indicators, assumptions, and risks specified in the logical framework matrix and the Project Document. Determine the usefulness of the indicators defined.
 - 27.3 An assessment of the scope, quality, and significance of the project outputs produced to date with expected results.
 - 27.4 Analysis of the extent of cooperation engendered and synergy created by the project in each of its component activities, between national and regional level activities, and the nature and extent of commitment among the countries involved.
 - 27.5 An assessment of the functionality of the institutional structure established and the role of the Steering Committee, the Regional Scientific and Technical Committee, and national committees and working groups.
 - 27.6 Identification and, to the extent possible, quantification of any additional outputs and outcomes beyond those specified in the Project Document.
 - 27.7 An evaluation of the timetable of activities and allocating financial resources to project activities, and determining their consistency with the Project Document. Where activities or outputs have been delayed, the cause of the delay should be identified, and where appropriate remedial actions proposed.
 - 27.8 Identification of the programmatic, financial variance, and adjustments made during the first five years (2016-2020) project and assessing their conformity with decisions of the Steering Committee Group and their appropriateness in terms of the overall objectives of the project.
 - 27.9 An evaluation of project coordination, management, and administration provided by the Project Coordinating Unit. This evaluation should include specific reference to:
 - i. Organizational/institutional arrangements for collaboration among the various agencies and institutions involved in project arrangements and execution;
 - ii. Project management effectiveness in terms of assignment and execution of project activities, and flexibility of management in terms of responsiveness to the need for changes in financial allocations, the timing of activities, or mode of operation;
 - iii. The effectiveness of the monitoring mechanisms currently employed by the Project Coordinating Unit in monitoring on a day to day basis, progress in project execution;
 - iv. Administrative, operational, or technical problems and constraints that influenced the effective implementation of the project and present recommendations for any necessary functional changes; and
 - v. Financial management of the project in relation to those on the achievement of substantive outputs.

- 27.10 A qualified assessment of the extent to which project outputs to date have scientific credibility.
- 27.11 Assessment of the extent to which scientific and technical information and knowledge have influenced the execution of the project activities.
- 27.12 An evaluation of the strategy and approaches adopted by the Project Steering Committee and PCU regarding the raising of co-financing support to ensure financial sustainability.
- 27.13 Specification of any deficiencies in project performance, administration, and management that warrant correction with associated recommendations.
- 27.14 Prognosis of the degree to which the project's overall objectives and expected outcomes are likely to be met (see **Annex 1L** Rating project success).
- 27.15 Lessons learned during project implementation and Recommendations regarding any necessary corrections and adjustments to the overall project work plan and timetable to enhance project objectives and outcomes.

11 Consultant for Conduct of the Mid-term Review

- 28) Consultant shall undertake the evaluation working concurrently and in consultation from July 15th to October 15th , 2021 for three months.
- 29) Selected consultant will conduct the Mid-term Review.
- 30) Consultant shall, at the commencement of the work, agree with SEAFDEC Committee responsible for the conduct of mid-term review, hereafter "TOR's Committee". Members of the Committee shall include the Project Director serve as the Secretary of the TOR's Committee and the Project Task Manager as a member of the TOR's Committee. The procedure for establishment of the TOR's Committee shall follow the SEAFDEC's Guidelines on Procurement of Products and Services including procedure and method of operating to complete all sections of the report. Work plan of the mid-term review will include:
 - i. Tentative proposals for the attendance of consultant at parts or all of the meetings convened during the period of the mid-term review.
 - ii. Proposals for any country visits that shall be deemed appropriate.
 - iii. A delivery schedule for a draft report for comment by the SEAFDEC TOR's Committee, the Project Task Manager, Secretary-General or representatives and the Project Director; and
 - iv. a timetable of the periods each Consultant will work from the Project Co-ordinating Unit for Fisheries Refugia Project at SEAFDEC/TD in Samut Prakan Province, Thailand.
- 31) Regarding the last of these requirements, the SEAFDEC/PCU undertakes to provide office space and internet access to the Consultant (s) during the said period.
- 32) Consultant shall create Workplan constitutes the basis of the agreement between the SEAFDEC and the Consultant.
- 33) The consultant shall attend, if practical, the Regional Scientific and Technical Committee Meeting and/or Project Steering Committee Meeting to be convened during the conduct of evaluation.
- 34) Consultant's responsibility to arrange for their visas and immunizations.

12 Reporting Format

- 35) The Mid-Term Review report shall comprise:
 - i. A concise summary, prepared by consultant, not exceeding five pages, including findings and recommendations

- ii. A detailed mid-term review report covers items 27.1 - 27.15 of the Terms of Reference above with attention to lessons learned and recommendations. The detailed report without annexes should not exceed 35 pages.
- iii. Annexes prepared by the consultant on specific topics deemed appropriate by the consultant. The annexes should correspond to and amplify the contents of the sections of the main report.

36) The report together with the annexes, shall be written in English and presented electronically in MS Word format (see **Annex 2: Tools, Templates and Guidance Notes** for use in the Mid-Term Review).

13 Schedule of the Mid-term Review

37) The table below presents the tentative schedule for the Mid-term Review.

Table 8. Tentative schedule for the mid-term review

| Milestone | Tentative Dates |
|--|--|
| Mid-term Review Initiation Meeting | Starting from 15 th July 2021 |
| Inception Report | July 2021 |
| Attend the RSTC4 Meeting | 22 nd July 2021 |
| Attend the PSC5 Meeting | August-September 2021 |
| E-based interviews, surveys etc. | August-September 2021 |
| PowerPoint/presentation on preliminary findings and recommendations | TBD |
| Draft reports to SEAFDEC TOR's Committee, Project Task Manager, SEAFDEC Sec-Gen, the Project Director, and other concerned Partners | 15 September 2021 |
| Subject to the receipt by the consultant of comments on the draft report from SEAFDEC TOR's Committee, Project Task Manager, SEAFDEC Sec-Gen, the Project Director, and other concerned Partners | 30 September 2021 |
| Final Mid-term Review Report | 15 October 2021 |

14 Contractual Arrangements

38) The Mid-term Review consultant will be selected and recruited by the SEAFDEC under an individual Special Service Agreement (SSA) on a "fees only" basis (see below). By signing the service contract with SEAFDEC, the consultant certifies that he/she has not been associated with the design and implementation of the FR Project in any way which may jeopardize his or her independence and impartiality towards project achievements and project partner performance. In addition, the consultant will not have any future interests (within six months after completion of the contract) with the projects' executing or implementing units.

39) Fees will be paid on an instalment basis, paid on acceptance by the SEAFDEC and Project Task Manager of expected key deliverables. The schedule of payment is as follows:

Schedule of Payment for the Mid-term Review Consultant:

| Deliverable | Percentage Payment |
|-------------|--------------------|
|-------------|--------------------|

| | |
|--|-----|
| Approved FR Inception Report (as per annex 2) | 20% |
| Approved FR Draft Main MTR Report (as per annex 2) | 40% |
| Approved FR Final Main MTR Report | 40% |

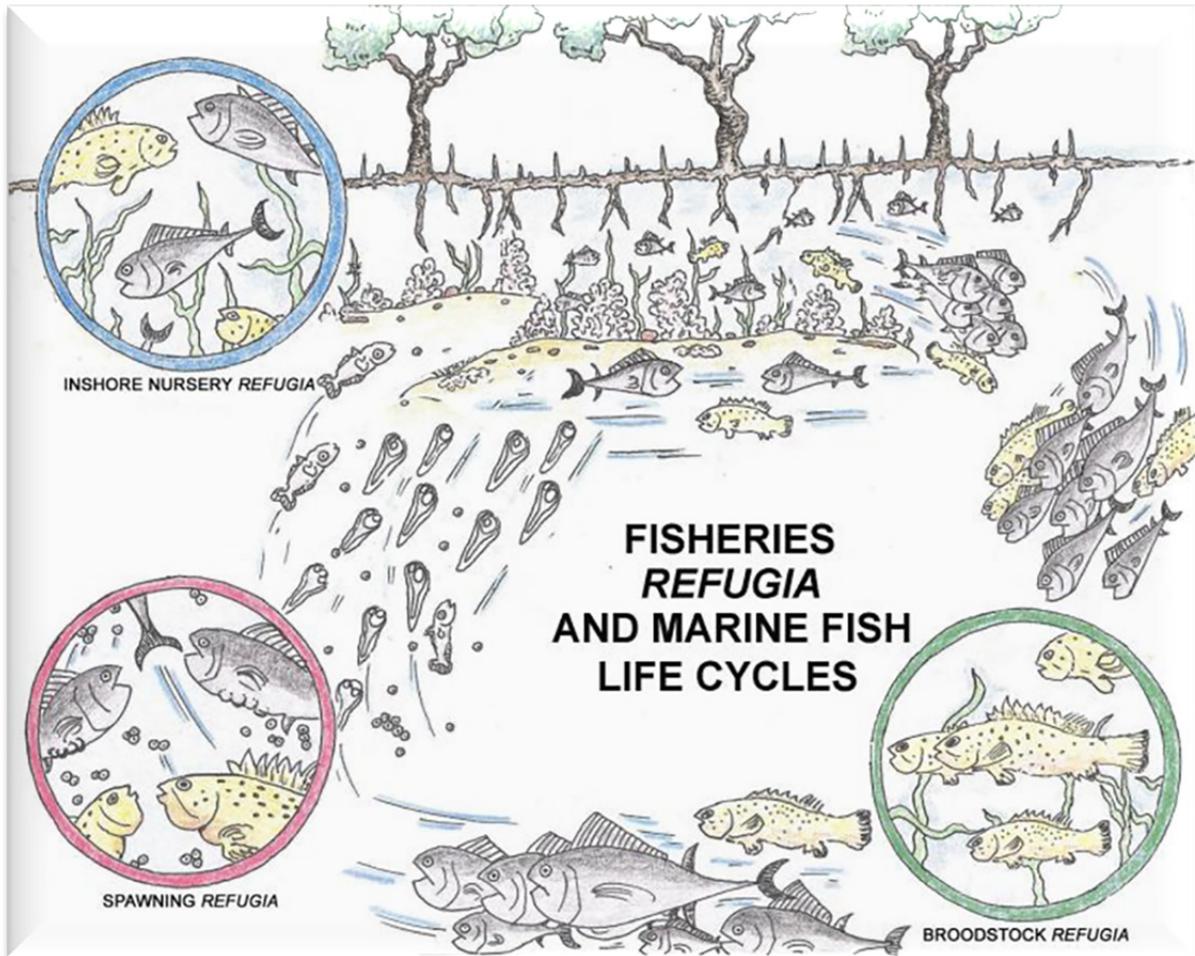

- 40) Fees only contracts: Note that during the COVID-19 pandemic travel remains unlikely and therefore purchase of air tickets and Daily Subsistence Allowance for authorized travel mission are not applied
- 41) In case the consultant is not able to provide the deliverables in accordance with these guidelines, and in line with the expected quality standards by the SEAFDEC and acceptance by Project Task Manager, payment may be withheld at the discretion of the SEAFDEC until the consultant has improved the deliverables to meet UNEP's quality standards.
- 42) If the consultant fails to submit a satisfactory final product to SEAFDEC Committee in a timely manner, i.e., before the end date of his/her contract, the Project Task Manager reserves the right to employ additional human resources to finalize the reports, and to reduce the consultant's fee by an amount equal to the additional costs borne by SEAFDEC to bring the reports up to standard.

15 SEAFDEC and UNEP Contract Persons

1. **Mr. Isara Charnrachakij**
 PPMD, Head
 SEAFDEC Training Department
 P.O. Box 97, Phrasamutchedi
 SamutPrakan, 10290, Thailand
 Tel: +66 2 425 6100
 Fax: +66 2 425 6110 to 11
 E-mail: isara@seafdec.org

2. **Ms. Isabelle Vanderbeck**
 Project Task Manager,
 900 17th Street, N.W. 2006 Washington D.C. - USA
 Phone: +(1-202) 971-1314
 Email: isabelle.vanderbeck@un.org

3. **Dr. Somboon Siriraksophon,**
 Project Director, Project Co-ordinating Unit,
 SEAFDEC/Training Department,
 P.O. Box 97, Phrasamutchedi
 SamutPrakan, 10290, Thailand
 Tel: +66 2425-6104 (Direct Line
 Fax1: +66 2425-6100
 Email: somboon@seafdec.org

What are Fisheries *Refugia*?

The term 'refugia' is the plural form of the noun of refugium, which in ecology is commonly referred to as an area that has escaped ecological changes experienced elsewhere and so provides suitable habitat for given species. The meaning of fisheries refugia is defined as: "Spatially and geographically defined marine or coastal areas in which specific management measures are applied to sustain important species [fisheries resources] during critical stages of their lifecycle, for their sustainable use."

The Establishment and Operation of A Regional System of Fisheries Refugia in the South China Sea and Gulf of Thailand is a part of the Strategic Action Programme for the South China Sea
